I'll agree with Steve on this one, the SW77 is a real gem (except for FM performance). As for other best portables: Drake SW8 is a real performer, but if you're classifying the RF-2600 as a tabletop, then the SW8 probably wouldn't be among the class of radio you're enquiring about. (The RF-2600 and other Panasonics from that line...the 2800 and 2900...are a pleasure to tune about with & have great audio). The ICF-SW07 is a fun little radio in a nice, small package.

JA

This page is Fair and Balanced - just like Fox News!!
Prominent Democrats
Representative Richard Gephardt, former House Minority Leader -
Missouri Air National Guard, 1965-71. (1, 2)
Representative David Bonior - Staff Sgt., United States Air Force
1968-72 (1, 2)
Senate Minority Leader Tom Daschle - 1st Lt., U.S. Air Force SAC
1969-72 (1, 2)
Former Vice President Al Gore - enlisted August 1969; sent to Vietnam
January 1971 as an army journalist, assigned to the 20th Engineer
Brigade headquartered at Bien Hoa, an airbase twenty miles northeast
of Saigon. More facts about Gore's Service
Former Senator Bob Kerrey... Democrat... Lt. j.g., U.S. Navy 1966-69;
Medal of Honor, Vietnam (1, 2)
Senator Daniel Inouye, US Army 1943-'47; Medal of Honor, World War Two
(1, 2)
Senator John Kerry, Lt., U.S. Navy 1966-70; Silver Star, Bronze Star
with Combat V, and three awards of the Purple Heart for his service in
combat (1)
Representative Charles Rangel, Staff Sgt., U.S. Army 1948-52; Bronze
Star, Korea (1, 2)
Former Senator Max Cleland, Captain, U.S. Army 1965-68; Silver Star &
Bronze Star, Vietnam (1, 2)
Senator Ted Kennedy (D-MA) - U.S. Army, 1951-1953. (1)
Senator Tom Harkin (D-IA) - Lt., U.S. Navy, 1962-67; Naval Reserve,
1968-74. (1, 2)
Senator Jack Reed (D-RI) - U.S. Army Ranger, 1971-1979; Captain, Army
Reserve 1979-91 (1)
Senator Fritz Hollings (D-SC) - served as a U.S. Army officer in World
War II, receiving the Bronze Star and seven campaign ribbons. (1)

Representative Leonard Boswell (D-IA) - Lt. Col., U.S. Army 1956-76;
two tours in Vietnam, two Distinguished Flying Crosses as a helicopter
pilot, two Bronze Stars, and the Soldier's Medal. (1, 2)
Former Representative "Pete" Peterson, Air Force Captain, POW,
Ambassador to Viet Nam, and recipient of the Purple Heart, the Silver

Star and the Legion of Merit. (1, 2)
Rep. Mike Thompson, D-CA: Staff sergeant/platoon leader with the 173rd Airborne Brigade, U.S. Army; was wounded and received a Purple Heart. (1, 2)
Bill McBride, Democratic Candidate for Florida Governor - volunteered and served as a U.S. Marine in Vietnam; awarded Bronze Star with a combat "V." (1)
Gray Davis, former California Governor, Army Captain in Vietnam; received Bronze Star. (1)
Pete Stark, D-CA, served in the Air Force 1955-57
Wesley Clark, Democratic Presidential Candidate - lengthy military career.

Prominent Republicans
Speaker of the House Dennis Hastert - avoided the draft, did not serve.
Former House Majority Leader Dick Armey - avoided the draft, did not serve.
House Majority Leader Tom Delay - avoided the draft, did not serve (1). "So many minority youths had volunteered ... that there was literally no room for patriotic folks like himself."
House Majority Whip Roy Blunt - did not serve
Senate Majority Leader Bill Frist - did not serve. (An impressive medical resume, but not such a friend to cats in Boston.)
Majority Whip Mitch McConnell, R-KY - did not serve (1)
Rick Santorum, R-PA, third ranking Republican in the Senate - did not serve. (1)
Former Senate Majority Leader Trent Lott - avoided the draft, did not serve.

Secretary of Defense Don Rumsfeld - served in the U.S. Navy (1954-57) as an aviator and flight instructor. (1) Served as President Reagan's Special Envoy to the Middle East and met with Saddam Hussein twice in 1983 and 1984.
GW Bush - decided that a six-year Nat'l Guard commitment really means four years. Still says that he's "been to war." Huh?
VP Cheney - several deferments (1, 2), the last by marriage (in his own words, "had other priorities than military service") (1)
Att'y Gen. John Ashcroft - did not serve (1, 2); received seven deferment to teach business ed at SW Missouri State

Jeb Bush, Florida Governor - did not serve. (1)

Karl Rove - avoided the draft, did not serve (1), too busy being a Republican.

Former Speaker Newt Gingrich - avoided the draft, did not serve (1, 2)
Former President Ronald Reagan - due to poor eyesight, served in a noncombat role making movies for the Army in southern California during WWII. He later seems to have confused his role as an actor playing a tail gunner with the real thing.
"B-1" Bob Dornan - avoided Korean War combat duty by enrolling in

college acting classes (Orange County Weekly article). Enlisted only after the fighting was over in Korea.
Phil Gramm - avoided the draft, did not serve, four (?) student deferments
Senator John McCain - McCain's naval honors include the Silver Star, Bronze Star, Legion of Merit, Purple Heart and Distinguished Flying Cross. Why did the Bush campaign smear him so? At least Senators Cleland (D-GA), Kerry (D-MA), Kerrey (D-NE), Robb (D-VA) and Hagel (R-NE) defended him.
Former Senator Bob Dole - an honorable man.
http://www.bobdole.org/bio/wwII.php
Chuck Hagel - two Purple Hearts and a Bronze Star, Vietnam.
http://www.senate.gov/~hagel/Information/bio.htm
Duke Cunningham - nominated for the Medal of Honor, received the Navy Cross, two Silver Stars, fifteen Air Medals, the Purple Heart, and several other decorations
http://www.house.gov/cunningham/about_duke.htm#Biography
Senator Jeff Sessions U.S. Army Reserves, 1973-1986
Colin Powell. What are we to make of Powell? On the one hand, a long career as a military manager. On the other hand, accused of covering up the My Lai massacre. Back on that first hand, one of the seemingly sane voices in this administration when it comes to Iraq (or at least he used to be). On the other hand, a clear hypocrite ("I am angry that so many of the sons of the powerful and well-placed... managed to wangle slots in Reserve and National Guard units...")
Representative Wayne Gilchrest (R-MD), served in USMC in Vietnam; wounded in action.

Here are a few more...

Democrats
Gray Davis, former California Governor, Army Captain in Vietnam; received Bronze Star.
Chuck Robb, US Senator from Virginia, served in Vietnam
Howell Heflin... Democrat... Silver Star
George McGovern, famous liberal, awarded Silver Star & DFC, dozens of missions during WWII.
Pete Stark, D-CA, served in the Air Force
Former President Bill Clinton - avoided the draft through student deferments; in the autumn of 1969, Clinton entered the draft but received a high number (311) and was never called to serve. (CNN article.) "...it was his doubts about the morality of the war and the Selective Service system that led him to abandon the ROTC idea and to subject himself to a draft lottery. Only the luck of the draw - a high lottery number - kept him out. " (Jeff Greenfield, ABC News, quoting Gov. Clinton.)
Former President Jimmy Carter, most recent recipient of the Nobel Peace Prize, seven years in the Navy. "Except for his fellow service-academy graduate Dwight Eisenhower, no President of the

twentieth century spent more years in uniform than Carter." (New Yorker Magazine)
Former Vice President Walter Mondale, U.S. Army 1951-1953
Former Senator John Glenn, D-OH (1974-1999) - Served in WWII and Korea; extensive military commendations include the Distinguished Flying Cross on six occasions, and the Air Medal with 18 Clusters.
Congressman Tom Lantos, D-CA - Did not serve in the US military; did serve in the Hungarian anti-Nazi underground in WWII. Saved by Raoul Wallenberg, is the only Holocaust survivor to serve in Congress.
Republicans/Conservatives
Political
Senator Don Nickles, R-OK - Oklahoma - Biography does not list military service. However, CNN lists Army National Guard service 1970-1976.
Senator Richard Shelby, did not serve (1)
Senator Jon Kyl, R-AZ - did not serve (1, 2)
Senator Tim Hutchison, R-AR - did not serve (1, 2)
Rep. Christopher Cox, R-CA, fifth-ranking Republican in Congress - did not serve. (1)
Representative Saxby Chambliss, Georgia - did not serve (1, 2), had a "bad knee" (yet somehow feels he has a right to attack Max Cleland's patriotism)
Former Representative JC Watts - did not serve (1, 2)
Jack Kemp, did not serve (1, 2) (was unfit because of a knee injury, though he heroically continued as a National Football League quarterback for another eight years - source)
Former Vice President Dan Quayle, avoided Vietnam service, got a slot in the journalism unit of the Indiana National Guard when the unit was at 150% capacity (at least he showed up for his duty, unlike GW) (1, 2)
Eliot Abrams, did not serve (1, 2) (however, played a key role in subverting democracy in South America)
Paul Wolfowitz, did not serve (1, 2)
Former Representative Vin Weber, did not serve (1, 2)
Richard Perle, did not serve (1, 2) (is the current bloodshed in the Middle East a direct result of his treasonous meddling in Clinton Administrstion foreign policy?)
Douglas Feith, Undersecretary of Defense for Policy - did not serve. (1)
Rudy Giuliani, did not serve (1, 2)
Michael Bloomberg, did not serve (1, 2)
George Pataki, did not serve (1, 2)
Spencer Abraham, did not serve
John Engler, did not serve (1, 2)
Lindsey Graham (R-SC) - website used to claim service as a "Operation Desert Shield and Desert Storm veteran." A current biographical website makes no such claim. In reality, was a National Guard lawyer who never left South Carolina during the Gulf War.
Rep. Dana Rohrabacher, R-CA, did not serve (1)
Rep. Darrell Issa, R-CA/49th, there were some problems with his

service.
Rep. John M. McHugh, R-NY - avoided the draft, did not serve (1)
Arnold Schwarzenegger, CA Republican Governor - went AWOL from his Austrian army base to enter a bodybuilding competition
George Herbert Walker Bush, pilot in WWII. Shot down by the Japanese; was lone survivor out of airplane (link).
Tom Ridge, Bronze Star for Valor in Vietnam (1)
Representative Sam R. Johnson, combat missions in both Korea and Vietnam, POW in Hanoi from April 1966 to February 1973 (1)
(don't ever run for president Sam, they'll spread rumors that you're crazy)
Senator Ted Stevens, R-AK, WW II pilot, two Distinguished Flying Crosses, two Air Medals, and the Yuan Hai medal awarded by the Republic of China.
Sen. John Warner, R-VA - Served in the Navy during WWII as a RM3
Congresswoman Heather Wilson, R-NM, served in the Air Force 1978-1989
Former President Gerald Ford, served in the Navy, WWII
Former Senator Strom Thurmond - apparently believes, along with Trent Lott, that America should have been a segregated society. Still, he served.
Punditocracy and Preacher-types (See also Media Whores Online)
George Will, did not serve
Chris Matthews, Mediawhore, did not serve.
Bill O'Reilly, did not serve
Paul Gigot, did not serve.
Bill Bennett, Did not serve
Pat Buchanan, did not serve
Rush Limbaugh, did not serve (4-F with a 'pilonidal cyst' [see "The Rush Limbaugh Story" by Paul D. Colford, St. Martin's Press, 1993, Chapter 2: Beating the Draft.])
Michael Savage (aka Michael Alan Weiner) - did not serve, too busy chasing herbs and botany degrees in Hawaii and Fiji
John Wayne, did not serve
Pat Robertson - claimed during 1986 campaign to be a "combat veteran." In reality, was a "Liquor Officer."
Bill Kristol, did not serve
Sean Hannity, did not serve.
Kenneth Starr, did not serve
Antonin Scalia, did not serve
Clarence Thomas, did not serve
Ralph Reed, did not serve
Michael Medved, did not serve
Charlie Daniels, did not serve
Ted Nugent, did not serve
Ollie North - Convicted in the Iran-Contra scandal, at least he served.
Charlton Heston - served in WWII, but went AWOL when Michael Moore asked him some tough questions.
Independents
Gov. Jesse Ventura, U.S. Navy SEAL training, did UDT work

Senator Jim Jeffords, U.S. Navy 1956-1959

The first radio I built was a Heathkit and I wish there were more out. I use to give them to children in the family who thought they were interested in radios.
Most of the time their parents were to damn lazy to help them build them.

Oh yes, I don't think he has a Bronze Star with Combat V. A Bronze Star perhaps. His DD 214 lists a Silver Star with Combat V. How did he get that?? The U.S. Navy has apparently never awarded a Silver Star with Combat V.

Interesting stuff!

4380. E-Z Hang Antenna Tool

Newsgroup: rec.radio.shortwave
Date: 2005-07-17 01:18:21 UTC
From: VOA SWLer <Reply_Here@nowhere.com>
Message-ID: <n8adnZP3ArJLLETfRVn-vA@comcast.com>
Source record: 27710

Here's a neat gadget to help you get your wire antenna high in the trees.

According to the testimonials:

Mike, K2CSJ, said, "... Worked like a charm. ..."

Gary, W9VJ, said, "I received my EZ Hang at noon today and had my B&W folded dipole up where it should be that very afternoon. ... Thank you very much for a product that really works."

Tony Davis, KN4VL, wrote,"Great idea and great product, I'm a happy customer and will recommend others to your website."

Howard, W5OM, says, "... I put the wire over the topmost branch, exactly where I imagined it should go [85 feet high]. ... I know of no other way I could have managed this, and am perfectly delighted. Thanks for building these gadgets!"

It's an "EZ HANG" slingshot tool. The URL is
<http://www.ezhang.com> or
<http://www.ezhang.net/store/products_all.php>.

Yes, I know it costs a hundred bucks, and anyone can build it. So, there is no need for anyone to post 'flames.'

The bottom line is: 1) It's expensive. 2) Anyone can make it, but 3) It works and 4) if you're honest with yourself, it's a lot easier to buy it than to try and make one yourself.

Finally, I own one and it works. And, I am *not* a salesman for EZ HANG. I just think it's a great product.

73,
BA

Why are busting his balls? First, it's an interesting question that MAY
lead to interesting discussion, if it doesn't break down into immature
flaming. And even if it has come up "every once in a while", new people
join the group all the time and perhaps they would like to see this
discussion.

That said, of course the terms "best" and "portable" are subjective, but in
general most people understand what that means. My votes:

Best absolute performance: Sony ICF-2010
Best for the dollar (as average price on eBay): Sangean ATS-818 or ATS-803a
Best to have in your hands and tune through the bands with: Panasonic
RF-2200
Best desktop receiver that has handles and works on batteries: Sony
ICF-6800WA

4382. Re: best shortwave portable ever ?

Newsgroup: rec.radio.shortwave

I would put the RF-2600 immediately behind the RF-2200 for radios in that category. It doesn't have quite the sensitivity of the RF-2600, but I really like the digital display and front-panel calibration control. Also great sound. An excellent, excellent radio. Keep it if you got it.

Good!

I do tech support and there ARE people who think these things are legit messages! We had a woman try to open and then send a complaint to a virus laden message from.."Tech support" every time a new copy came even after I TOLD HER it was a virus, and to delete it, on two previous calls! The first and second viruses were detected by Norton or whatever and she was ok, but the last one nailed her PC and totally trashed it.

She calls again, all shakey, and I ask her why she tried to open it, after I had told her we would NEVER, EVER send an attachment without talking to her first, ever, period. I told her that an attachment flat out made the message bogus, period, twice before. Just delete it. Then she says, and I still can't believe she said this, "Oh GOD, I thought you just meant for that month it was a bogus message if it had an attachment!" Huh?? "No ma'am, ever, period, always.."

This same woman replied to one of the bank messages asking for her account info. Sigh..

What does she do for a living??

College Professor, I verified it!

No wonder so many of my friend's kids are so scary dumb..

4) if you're honest with yourself, it's a lot easier to buy it than to try and make one yourself.

Ok .. but you can go to WalMart or K-Mart and get the Sling shot, the reel, 2 small hose clamps and some suitable fishing line and be home with it in an hour or less.

You can assemble it in 20 minutes or less.

And you can be hanging antennas ** today **.

Rather than order the EZ-Hang today and wait a week or so for it to arrive.

Not to mention the cost savings of $60.00 or so by making your own.

I happen to own a Panasonic RF 2600 radio which I bought new at a Service Merchandise store about twenty something years ago.As far as the performance of the radio is concerned,I rate it about average,certainly nothing to crow about.On the bottom of the radio there is a jack that says EP EXT/SP (for an extension speaker,I suppose) I have never used any of the jacks on the radio before,but about two years after I bought the radio,the radio would not turn on or light up at all.One day I was poking around at the jacks on the radio with my fingers and I found that the above mentioned jack was slightly loose.I poked a piece of plastic between the metal part of the jack and the plastic casing of the radio and it worked.But sometimes that tiny bit of plastic wedge will work loose and the radio will not work again unless I mess around with that bit of a plastic wedge I put there.As far as me takeing the chassis out of the radio cabinet,and me not knowing how to repair radios,(unless it is oviously a wire that needs soldering back together or a screw or nut) I think my best bet is to leave the radio alone.I think the jack needs to be tighned up,but there is no way to reach the nut from the front of the radio.Some of my radios,if I pull the knobs off,there is enough room,but just barely,I can tighten up those nuts.

The very same morning myself and a few other Troops were to get on that Air Force Airplane (the seats face backwards) at Tan Son Nhut www.tsna.org us lean mean fighting machines were handed a little bitty Vietnam Campaign Ribbon thingy to wear on our chest.I still have mine,it looks like a turkey buzzard (even when the Officer handed them out to us) took a poop on it.I remember beating the heck out of that bowl of hard as concrete sugar with a spoon in the Tan Son Nhut Airport trying to get some sugar for my cup of coffee while we was waiting to get on the Airplane.I used to stop off at a local Shoney's restaurant near me on my way home from work.Those gals who worked there would say,Coffee,tea,or me? (sweetheart,just hand me a cup of java)

I've had recent tech support for two HP computers I own. Both
the US and the Indian support men and women were of very high caliber.

For God's sake, man, take things in their context. I said that I want nothing from the alternatives which that person was offering.

Please, just bring in your knowledge which will hopefully help the others. We are not in an IQ contest, or in a show-off. I know that you an all the other people in this group are darn smart - otherwise I wouldn't bother asking a question here. So, be yourself and try help the others.

Look, I have something for those interested:

http://www.csd.uwo.ca/~nic/radio/radio.shtml

It may be nothing, but at least I try to help. This is the spirit.

Watkins Johnson made a "portable" - never tried it, but I'd expect it
to be quite good.

I have my AOR 7030+ set up as a portable.

The post 1996 Drake SW8 gets great reviews.

The Lowe HF-150 is reasonably portable.

The Sat 800 seems enormous for consideration as a portable - but it does
run on batteries.

It is pretty uncanny how some folks can get tricked pretty easily. Whenever I get those e-mails, I just use the "block sender" function and get rid of them. If I get a string of those e-mails, I go to my provider's website and report them as spam.
I do use Internet Explorer, but I disable active scripting, install on demand, etc. If I do need to go to a website that uses Javascripting, I use Mozilla Firefox 0.8. I did try the newest version of Firefox, but I preferred the earlier version.
Now, about the radio.....I've got the PLL locking on all ranges as long as I keep the VFO tuned below its highest frequency.
Too bad A.G. Tannebaum is closed on Fridays; otherwise, I would have ordered the service manual. I don't think it will be more than another hour's work to get the radio up and running.
An interesting thing about this radio...it uses a low priced Murata CFU-455J (4-element) filter for the narrow bandwidth, while the wide bandwidth seems to be a Toko transformer that has the ceramic filter integrated into the structure. If the radio wasn't such a difficult unit to work on, I would replace that filter with an 11-element unit such as a CFR455.
The radio is definite in the "just above toy" class, but it is a very nice toy! It will be a keeper.

CNN is just as bad. Neither can report news in a Fair and Balanced format. Just as the Republican Party has abandoned conservative principles, so too have these news networks ceased to report news. They merely voice what a government official or party hack has given them to read for the next 24 hours. It is disgusting what we get pushed off on us as news. It is mostly mis-leading mis-direction tripe.

Dave in Texas

Vote for Ron Paul

4445. The future of Radio Six via shortwave in North America

Newsgroup: rec.radio.shortwave
Date: 2005-07-17 07:21:17 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3juf7cFrptbgU1@individual.net>
Source record: 28025

On "Saturday Sounds" this morning (0600 UTC), Tony Currie answered my query about the future of Radio Six via shortwave in North America.
After reading my message on the air (originally posted to SW Programs and DXLD),
he replied that listeners reported poor reception and lots of interference for
Radio Six's 5,105 kHz relay to North America. As a result, they're working with
their friends at WBCQ to see if the program can be relayed on 7,415 kHz.
In any case, there will be an interruption of the North American shortwave service in August, as I previously mentioned.
He also reported that many hosts at the station will be going on vacation in August -- it appears only he and Jeff Fielder of "Sounds From the Lost and Found" are making new shows that month.

Grian, Hope you didn't throw your arm out of joint patting yourself on the back. But what makes you think I'm a liberal? Or a wack job?

I won't be climbing into bed with David any time soon after calling him a Dumbass in another thread!

You may be right about Democrats. I never really kept track of the political affiliations of my friends and acquaintances who served (and some who died) in combat. Tell you what, the next time a National Guard or Reserve unit returns to your hometown from deployment in Iraq (or Afghanistan), you be there to greet them. Maybe take a bullhorn. Make your announcement: "Democrats are pussies! They don't know how fight." I'm betting that will be a different experience than taking cheap shots at straw men on the internet.

An no, you really didn't touch a nerve today.

Greg

I like the HF-150, choice of handle or shoulder strap and the shoulder strap
has a built-in antenna. A bit bulky, but far smaller than some "portables".

And it's generally best to try and listen every day because sure enough, if you skip a day, you'll later find out that that day was the best opening of the season!

It just seems to work that way.

I'm not sure however just when they plan to vacate 90 metres, so there may not even be a 2005-2006 season.

4466. CC TV Signal Interrupted by News of Communist Party Withdrawals (CIA / PSYOP activity ??)

Newsgroup: rec.radio.shortwave
Date: 2005-07-17 13:37:53 UTC
From: KendrakeR7 <harvegz3@unc.edu.nosp>
Message-ID: <6f8cd$42da5f22$d1cc4588$22101@snip.allthenewsgroups.com>
Source record: 28046

http://english.epochtimes.com/news/5-7-7/30120.html

CCTV Signal Interrupted by News of Communist Party Withdrawals
By Li Dan and Liu Dingyi
The Epoch Times
Jul 07, 2005

The withdrawals and defections from the Chinese Communist Party, influenced by the "Nine Commentaries," have astounded overseas Chinese. But within China the CCP has maintained strict censorship. This is a car in Los Angeles broadcasting the "Nine Commentaries" along with information about Party withdrawals. (The Epoch Times)

Once again, Mainland China's news blockade has been challenged. According to sources in China, around 8:44 p.m. on the night of July 3rd the Chinese Central Television (CCTV) station's signal was interrupted by news of the "Nine Commentaries" and withdrawals from the Chinese Communist Party (CCP). The CCP-controlled media has blocked all information about the "Nine Commentaries" and withdrawals from reaching the general populace. Wide Scale Broadcast Interruption

According to the Associated Press (AP), the spokesperson for APT Satellite Company Limited, Hong Kong (APT), said that the broadcast interrupted 25 television channels, including 13 China Central News TV channels and 12 provincial channels. The spokesperson said that they could not find the source of the interrupting signal. The regions included Shanghai city, Shenzhen city, Guangdong, Hunan, Yunnan, Inner Mongolia, Ningxia, and Zhejiang provinces.

The spokesperson said that the interruption was supposed to be an hour long, but only 14.5 minutes of footage were actually shown. The spokesperson refused to reveal the contents of the broadcast. The official Chinese media also declined to reveal the contents of the broadcast. However, reports criticized "Falun Gong" for interrupting the signal.

According to a reader's report from the Northwestern region of China, "Around 9:30 p.m. on the evening of July 3rd, I was watching the Gansu provincial channel, when it suddenly changed to a special news program. There was a video of parades and lectures. The broadcast appeared to be celebrating the withdrawals from the CCP.

It said that more than two million people have already withdrawn from the Party. It also reported on overseas defectors and about a list of 1,000 Communist spies in Australia that one defector gave either the Australian or American the government."

"After this introduction, calls to quit the Chinese Communist Party came on the screen. One caption said: 'Heaven will Punish the CCP, Withdrawing from the CCP will Guarantee Your Safety.' I could not see the details of the sentence. However, when the screen settled, the caption was very clear: 'Only Without the Communist Party, Can There Be a New China.' This went on for at least two minutes, and then the screen went black."
According to the reader, she changed the channel more than 10 times but every channel was black, which lasted until 10:00 p.m.

The reader said: "The Mainland Chinese audience who saw the broadcast were very excited. Although many people were extremely happy, they were also afraid, and would only discuss it in private. If there were more such broadcasts, people would not be afraid anymore."
The CCP has always censored news on the "Nine Commentaries" and the great wave of people denouncing their membership from the CCP with 2.8 million withdrawals to date.

The CCP has established a strict information blockade. For international events that the government does not want its citizens to know about, like the large-scale 2003 march in Hong Kong, government officials cut the stories from the international channels broadcasting it.

According to previous reports, the editor for political law at The World Economic Herald, Mr. Zhang Weiguo believes that the broadcast interruption was in reaction to the Chinese media's suppression of freedom. The Chinese government is the roots of all its own problems, he believes.

The broadcast interruption is a breakthrough for anyone who wants to bring freedom back into Chinese news. Advanced technology is the new weapon in the battle a gainst the domination and control of the Communist government. Mr. Zhang Weiguo believes that control over public opinion is imperative for the CCP's ability to pursue its interests. The government manipulates or manufactures "public opinion" to demoralize and repress the population. Thus, the people have tried many ways to topple their dominating control.

The renowned writer Hu Ping believes that there is lawlessness only when all people are fully complying with the law. "When people have been denied their

freedom of speech, a television broadcast interruption
is necessary and lawful."

WOW !!!!!

Also check out the S-40B at HQ;
the BC-348 in the C-47 is OK,too as is the
vintage Vibroplex "Champion" bug.
Did anyone else wonder how they got two aircraft
engines in those C-47's with standard airline
passenger-type doors?

I agree craig. In my home it's mandatory to have good grades and do well in school. Yes it's hard finding the energy to help three kids with their homework and attend their school functions after working all day but it's my responsibility to make sure they get a good education. My parents didn't get involved in my schooling and when I got in high school my grades suffered because I screwed off and it cost me a architectural career. It took me years to catch up in order to make a good living but I'll still never be an architect :(

15 years ago it was EAMs constantly, several REACH missions simultaneously, AF1 and 2, Generals ordering limos and T-times, personal HF phone patches, etc.

I think people just have a tendency to romanticize the past.

(Copied from a preious responce of mine on another thread, but on target
here)

For the most part, listeners in third world countries tune in to get news
and
information. They aren't into it for any "hobby" appeal. They just want
the info that they couldn't get otherwise. It would go to reason that third
world listeners wouldn't be in the market for rigs like the R8b, IC-R75 or
NRD-545. They would be well served with a capable and economical portable
like the ones being churned out in China by Degen. As far as most of the
western/modern world is concerned, with internet and satellite
communications widely available, sw listening for content is a second string
medium. It is less reliable and it is always of a lesser quality as far as
the clarity of the transmission. It is true, however unlikely that the
internet could go down and satellite com could be interrupted for any one of
a number of reasons. If that does occur, you can count on it coming back up
in a fairly short time. Not to mention, solar occurrences that are intense
enough to wipe out satellite communications would also wipe out hf
propagation. So, for getting information of all kinds, you dont have to
worry about needing a pricy tabletop sw rig. It isn't 1920-1980 any longer.
For the most part, the only ones left in the western/modern world who want
an expensive sw tabletop rigs are hobbyists like us. So, I can see why
fewer and fewer manufacturers are sticking with making tabletop sw radios.

Michael

Well for one thing, everyone who is important in the defense, state,
and intelligence departmnet still uses it. INTERNET is too easy too
trace, and is full of bugs.

Second, if it is dead then I suggest you get a better receiver...it is
crawling with signals.

And third, in my line of work, the bad guys and everyone with a cause
is using it......only a fool would use a system or a computer with
tracability on it and throughout the servers it threads the
communications to.

SW is far from dead...probably the same people who missed out on the
Cold War action are missing out on the hottest thing since then.

Hi

Yes that is the spirit. This is what makes SW fun and gives it a community
draw. In my personal experience with other SWLers, I found the majority of
them to be smart, comprehendible, logical, responsible and patriotic. Of
course there are those that are Not here for the spirit of radio or lack it.
What can you do?

Thanks for info on your website
Lucky

Get a standby (or two or three) Shortwave Radio,they don't need to be the high priced spred) put them in a metal trash can with a tight fitting lid,put a few handy dandy walkie talkies in there too.The old tube type radios are the best (in my opinion)
Shortwave/AM/FM/whatever,tube type radios.Just like Firearms,Buy one,Hide one.

Hi there Steve,

Hope things have been going well for you.

I see one on Ebay with 16 hrs to go and a bid of $248. Are these portables worth say $300 used price/performance wise for program and some SSB/Ham listening compared to say a Degen 1103 for $45 or perhaps a Sony 7600GR for $130 ??

Hi

I agree the DE 1103 for $65 shipped is just unbeatable. It's a mini tabletop for me when I take it out. When I bring in down near the beach, it pulls tons of SSB signals out for me. The sensitivity on it for a radio this cheap is almost impossible to even compete with. It's excellent for me here in Florida.

On top of that the FM stereo is also superb. Very nice. The only problem with this whole picture is it *might be manufactured by slaves of the CCP. But, I bought one a while back and it sometimes bothers me.

But anyway the 1103 has to be the best portable price/performance wise for both BCB and SSB. Quality for $45.

I've been employed at three companies over the past
10 years, and what I've seen is that companies are less
willing to hire grads right out of college without some
internship time (aka co-op time) first. The reasons for
this are numerous, but two big ones are:

-Grades aren't worth much in the real world,
especially with grade inflation.
-Whether the person can do the work is not
necessarily reflected by the college experience.

The teams I've been on in the past have been
burned in by new grads coming in, expecting the
world, and then finding out that they actually are
expected to work. 5 out of 6 grads then get
jaded and leave because "they don't pay me
enough for what I do." Usually by the time they
leave, they are enough of a drag on the team
that we're happily showing them the door.

I'm a big believer that your first job out of
college should teach you humility, so that you
can appreciate where you came from when you
land a better job.

I've seen some ballroom dancing events (my sister-in-law
used to compete), and that's pretty much what they
typically wear in those events. Not to defend a show
that I've never seen, but the fact that a wide demographic
tuned in to watch it is actually an anomaly these days,
especially where the old "family hour" on television
is about as dead as a doorknob.

> A culture that makes "Dancing with the Stars" a hit

not
> interested in SW's highbrow fare. It's a tragedy, and it may yet be
the
> end of us.

It all has to do with what is desired. There are so
many choices out there these days for entertainment
and information that it's hard for one medium and
one thing to stand above all the others and attract
your attention, particularly a "low tech" medium
like SW.

What goes around, comes around. Who'd have thought
that swing and jump band music would have made
a comeback in the 90's?? Or Celtic music in the 90's??
Stranger things have happened.

Someone in this news group (I forget who it is) once posted that Maryann Kehoe (I don't remember the exact words) wanted him dead.Let me tell y'all this,if anybody post that they want me dead,I am picking up my phone and call the FBI building in downtown Jackson.Just try me! I will also forward such threats to that FBI building downtown via email.

Apparently, there are a lot of us crazies here:

The survey, which was conducted from July 8-11 among 1,009 adults, and which has a margin of error of plus or minus 3.1 percentage points, finds that respondents, by a 49 percent-to-46 percent margin, disapprove of Bushï¿½s job performance. Thatï¿½s a drop from the last NBC/Journal poll in May, when 47 percent approved and 47 percent disapproved. In addition, the only time when Bushï¿½s job rating has been worse was in June 2004, when 45 percent approved of his performance.

Furthermore, only 41 percent give Bush good marks for being ï¿½honest and straightforwardï¿½ ï¿½ his lowest ranking on this question since he became president. Thatï¿½s a drop of nine percentage points since January, when a majority (50 percent to 36 percent) indicated that he was honest and straightforward. This finding comes at a time when the Bush administration is battling the perception that its rhetoric doesnï¿½t match the realities in Iraq, and also allegations that chief political adviser Karl Rove leaked sensitive information about a CIA agent to a reporter. (The survey, however, was taken just before these allegations about Rove exploded into the current controversy.)

The ionosphere cannot be "destroyed" it is constantly being created /
renewed by the effects of incoming solar particles. In fact, the
ionosphere's D layer completely disappears on the night side of the earth,
but returns full-strength in a matter of less than one hour after sunrise.

Sometimes the entire global ionosphere IS completely "destroyed"
(electrically neutralized) after the CME from a large solar flare impacts -
but it always returns once the storm subsides.

The ill-informed make a big deal about the multi-megawatt ERP of the HAARP
antenna array. As it happens, the electron current in the ionosphere at any
given moment from solar radiation amounts to hundreds of BILLIONS of watts.
Compared to that, the effect of HAARP is like a mosquito biting an
elephant.

HAARP might indeed be able to create a small localized "hole" in the
ionosphere directly above the transmitting array - in the same way you
could create a temporary "hole" in the surface of a glass of water by
putting an object in the glass - a hole which would fill and disappear the
moment you remove the object... just as any HARRP-induced effect on the
ionosphere would quickly disappear once the array is switched off.

The crap that HAARP alarmists believe never fails to amaze me. It's a sad
commentary on the poor state of science and math education in the public
schools.

ATLANTIC PUBLIC/MARINE TROPICAL DISTURBANCE MESSAGES
ISSUED IN THE LAST 6 HOURS

WTNT35 KNHC 172344
TCPAT5
BULLETIN
HURRICANE EMILY INTERMEDIATE ADVISORY NUMBER 28A
NWS TPC/NATIONAL HURRICANE CENTER MIAMI FL
8 PM EDT SUN JUL 17 2005

...HURRICANE EMILY BEARING DOWN ON THE YUCATAN PENINSULA...

A HURRICANE WARNING REMAINS IN EFFECT FOR THE YUCATAN PENINSULA FROM
CHETUMAL NORTHWARD TO CABO CATOCHE...THEN WESTWARD AND SOUTHWARD TO
CAMPECHE...INCLUDING COZUMEL AND THE ISLAS MUJERES. A HURRICANE
WARNING MEANS THAT HURRICANE CONDITIONS ARE EXPECTED WITHIN THE
WARNING AREA WITHIN THE NEXT 24 HOURS. PREPARATIONS TO PROTECT
LIFE AND PROPERTY SHOULD BE RUSHED TO COMPLETION.

A TROPICAL STORM WARNING IS IN EFFECT FOR THE COAST OF BELIZE FROM
BELIZE CITY NORTHWARD TO THE BELIZE-MEXICO BORDER. A TROPICAL STORM
WARNING MEANS THAT TROPICAL STORM CONDITIONS ARE EXPECTED WITHIN
THE WARNING AREA WITHIN THE NEXT 24 HOURS.

TROPICAL STORM CONDITIONS ARE ALSO POSSIBLE OVER PORTIONS OF EXTREME
WESTERN CUBA.

INTERESTS IN THE SOUTHERN AND WESTERN GULF OF MEXICO...AS WELL AS IN
SOUTHERN TEXAS...SHOULD MONITOR THE PROGRESS OF EMILY.

FOR STORM INFORMATION SPECIFIC TO YOUR AREA...INCLUDING POSSIBLE
INLAND WATCHES AND WARNINGS...PLEASE MONITOR PRODUCTS ISSUED
BY YOUR LOCAL WEATHER OFFICE.

AT 8 PM EDT...0000Z...THE CENTER OF HURRICANE EMILY WAS LOCATED NEAR
LATITUDE 19.6 NORTH...LONGITUDE 85.9 WEST OR ABOUT 90 MILES...
145 KM...SOUTHEAST OF COZUMEL MEXICO AND ABOUT 270 MILES... 440
KM...EAST-SOUTHEAST OF PROGRESO MEXICO.

EMILY IS MOVING TOWARD THE WEST-NORTHWEST NEAR 20 MPH...32 KM/HR...
AND THIS MOTION IS EXPECTED TO CONTINUE FOR THE NEXT 24 HOURS. ON
THE FORECAST TRACK...THE CENTER OF EMILY IS EXPECTED TO REACH THE
NORTHEASTERN COAST OF THE YUCATAN PENINSULA LATE TONIGHT OR EARLY
MONDAY MORNING...AND MOVE ACROSS THE NORTHERN YUCATAN PENINSULA
DURING THE DAY ON MONDAY.

MAXIMUM SUSTAINED WINDS ARE NEAR 135 MPH...215 KM/HR...WITH HIGHER
GUSTS. EMILY IS A CATEGORY FOUR HURRICANE ON THE SAFFIR-SIMPSON
SCALE. FLUCTUATIONS IN INTENSITY ARE COMMON IN MAJOR HURRICANES...
BUT LITTLE OVERALL CHANGE IN STRENGTH IS EXPECTED BEFORE EMILY
MAKES LANDFALL. WEAKENING WILL OCCUR AS THE CENTER OF EMILY
CROSSES THE YUCATAN PENINSULA.

HURRICANE FORCE WINDS EXTEND OUTWARD UP TO 60 MILES... 95 KM...
FROM THE CENTER...AND TROPICAL STORM FORCE WINDS EXTEND OUTWARD UP
TO 150 MILES...240 KM. NOAA BUOY 42056 RECENTLY REPORTED SUSTAINED
WINDS OF 73 MPH WITH A GUST TO 85 MPH.

AN AIR FORCE HURRICANE HUNTER PLANE RECENTLY REPORTED A MINIMUM
CENTRAL PRESSURE OF 951 MB...28.08 INCHES.

COASTAL STORM SURGE FLOODING OF 8 TO 12 FEET ABOVE NORMAL TIDE
LEVELS...ALONG WITH LARGE AND DANGEROUS BATTERING WAVES...CAN BE
EXPECTED NEAR AND TO THE NORTH OF WHERE THE CENTER MAKES LANDFALL
IN MEXICO.

RAINFALL TOTALS OF 5 TO 8 INCHES ARE POSSIBLE OVER PORTIONS OF THE
YUCATAN PENINSULA WITH ISOLATED MAXIMUM AMOUNTS UP TO 12 INCHES.
LESSER AMOUNTS OF 1 TO 3 INCHES ARE POSSIBLE OVER WESTERN CUBA.

REPEATING THE 8 PM EDT POSITION...19.6 N... 85.9 W. MOVEMENT
TOWARD...WEST-NORTHWEST NEAR 20 MPH. MAXIMUM SUSTAINED
WINDS...135 MPH. MINIMUM CENTRAL PRESSURE... 951 MB.

THE NEXT ADVISORY WILL BE ISSUED BY THE NATIONAL HURRICANE CENTER AT
11 PM EDT.

FORECASTER PASCH

This movie had a similar plot line. It follows a red violin for a few hundred years as it fulfills a fortune teller's prophesy. Good film.

4559. OT: FM Radio with RDS Function

Newsgroup: rec.radio.shortwave
Date: 2005-07-18 01:45:02 UTC
From: J&D Schnoor <jimdianes@frontiernet.net>
Message-ID: <yQDCe.1438$cg.512@news02.roc.ny>
Source record: 28189

I am sorry for the off-topic post, but this group has been very helpful in the past. I am looking for a listing of FM receivers that have the RDS function. I am in the US and it is not as common here as in Europe. I am especially interested in home receivers or, ideally, a reasonably priced home theater in a box receiver that has the RDS function. I have tried various search engines, but I can't seem to find much that is helpful. I know some webpage in the past had a listing of receivers with this function, but I cannot seem to locate it.

In article <2387017833.2458F8789@tarrnews.net>
"Pale Dalek" aka Lardass Lloyd Davies <l...@no.spam> whined:
>
> And behold,

And it came to pass like the gas the ghastly inferior mutant Porky, the queen of Knob Jobs in Alabama passes when he opens his mouth, spent yet another wasted week whining about others. Friday night will be no exception, as the mentally ill retard who thinks trashcan robots are real will spend said Friday night alone, drunk and stupid, whining about others on the internet instead of actually dancing with a woman. No woman wanted the ghastly pale Porker, because of his ugly face and flaky bald head and gobs of flab that hung over his fucking belt,along with the terminal body odor and bad breath was a real turn off. The ghastly pale porker dreamt that he actually went out and interacted with people, though, when in reality people shun him like a leper and all Porky got was drunk and pissed himself and his filthy bed. Porky thinks he got promoted when he recently got fired from his high school kid's pizza delivery job/career. There are no Daleks under your command, 'tard boy. They are fictional robots used in a television show! You need to get mental help again failure boy.

You have been a failure in everything you have ever done, PERIOD!

You are indeed "pale" you never venture forth outside except for your minimum wage "job," and to buy more of that pussy Bud Lite beer. A real man's beer would probably kill a big fat pussy like yourself.

You need to seriously take a long hard look at yourself in a properly lit mirror in that roach infested hovel you call home and then take action. Lose weight, get mental help, stay off the computer for hours on end and face reality. You are 31 years of age, you deliver pizzas, you play with dolls, you get drunk and spew your filth and delusions on here and usenet. Nobody, I repeat, nobody except for a couple of geeks like yourself can stand you. The best thing you could do is to slit your wrists while in that shitty vehicle of yours this summer, then if the police didn't find you right away, the Alabama summer heat would do it without you having to be cremated. You are a blathering asshole that is a boil in the crack of America's ass. You irritate us, end it now Porky, do it!

And if Porky would ever succeed at committing suicide, it would be a first that he succeeded at something and the world would be better off. God works in mysterious ways keeping the fake xtain Porky Pale Dicklick a virgin where he can't pollute the human gene pool.
And it was good.

And the world laughed at the 31 year old virgin and it was good.

Drake sold the SW8 circuit to "Grundig". The SW8 was built in the US, the Sat800 is built in China. Quality was very poor in the initial Chinese units - has improved some according to reports. Which would you rather have?

I had the 800 but didn't care for it. Given the similarities between
the 800 and the SW8, I probably wouldn't care for the latter, either.
So, I don't plan on adding either to my collection.

Lots of people love these receivers, though, so by not adding them to
my collection, I figure I'm helping others :).

sounds like you have the white version, it is not as good as the orange
version starting with serial number 30,000

it is one of the most sensitive portables you will ever see.
I did a run off last year (or two ago) and published the results here and
they were amazing. the sony had a clear signal when other famous receivers
had mud !

4577. Comms on 5714 khz

Newsgroup: rec.radio.shortwave
Date: 2005-07-18 03:30:48 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1121657448.592257.88050@g44g2000cwa.googlegroups.com>
Source record: 28107

I've been hearing comms on this frequency on and off for the last day or so. Unfortuately, the static crashes have been so severe it's hard to following what's being said. It sounds like some sort of exercise, though, and I believe that 5714 is used by the Navy.

I've been listening from my home in Brooklyn, NY. Some of you might want to keep an eye on this frequency. There are long periods of inactivity, but with a little luck your patience will be rewarded.

I've been wondering about the manufacturing dates on the 800. How can I tell when a set was made? In what order were the fixes made during manufacture?

If I see a set, how can I tell if it's the latest version, so I don't get stuck with garbage quality control?

Funny how there was a 'hijacked plane flying into a building' exercise going on at the same time as the WTC 'attack'.

Remember how there were reports of a power black out in the subways before the bombs went off? There was a 'terror attack' practice exercise going on simultaneously to the real thing.

I do have the white version.....I also have a couple of filters that I
can throw in, but I will keep it original. You never know who will want it
in the future.
It will be nice, once I get that final wrinkle worked out of it.

Noooooooooooooooooooo!!! Haven't had time to listen for a while,
hopefully Chuck is just taking some time off; or hey, maybe starting
some new venture or network?

Dan, wouldn't it be a hoot to tune into Rush and hear Chuck sitting in
for him sometime?! Ofcourse this would never happen, but I know EVEN
YOU would love to hear that, at least once anyway!

Will try to catch Chuck this coming week.

Pork and bones....

4590. CKZN-CBU transmission solution : http://cbc.am/cbc-src.htm

Newsgroup: rec.radio.shortwave
Date: 2005-07-18 08:16:11 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <dbfoh1pit2@gnus01.u.washington.edu>
Source record: 28120

CKZN-CBU transmission solution:

http://cbc.am/cbc-src.htm

Canada's rural and northern populations are for the most part not fully served by AM & FM radio stations during daytime hours. Although CBC North runs an extensive AM / FM and TV network for northern Canadian residents -- there are still millions of square kilometres that the CBC-SRC will never be able to reach with its current broadcast network.

The lack of daytime information radio network service does not help northern and rural residents in their day to day lives. It goes without saying that the lack of access to an information radio service in Canada's remote regions increases the demands on expensive to deliver federal and provincial services. Poor delivery of basic government services has led to a negative relationship between northern and rural residents and Canada's southern urban population.

In a matter of speaking CBC-SRC has pretty much failed to meet fully the news and information needs of all northern and rural residents, since these residents fell into the revised CBC-SRC mandate in the 1970s. This mandate is providing a basic information radio service to all of Canada's regions.

Most of Canada's populated remote areas can be reached cost effectively with two shortwave transmission sites. Shortwave is an ideal media for delivering radio programming to remote regions during morning, daytime and evening hours. The proposal before you is for a transmitter site in British Columbia that could serve western and northern Canada and a transmitter site in Newfoundland that can reach Labrador, Northern Quebec and regions in the high arctic that are poorly reached by the BC transmitter site.

Technical Notes

It is assumed that the shortwave transmitters would be fully Digital Radio Mondiale (DRM) compatible. DRM allows for FM radio quality digital audio over very long distances using shortwave.
This proposal is for a 2 frequency nationwide network using the 49 meter & 41 meter bands. In total 4 frequencies may be required to provide daytime and nighttime transmission with 95% availability. This proposal requires using 2 variable frequency automated 50 kw DRM SW transmitters.

The 2 DRM transmitters would be expected to run around 16 hours a day, out of a shortened 112 hour week transmission schedule. In cases of national emergency, the network could run 168 hours a week with 5 different voice only audio streams.
I do not expect a new frequency allocation for this shortwave service, as the CBC-SRC is already using three shortwave frequencies

(http://www.cbc.ca/frequency/shortwave.html). CBC-SRC needs to make a uniform allocation of 40 khz for domestic shortwave broadcasting within the 49 m and 41 m bands. This allocation would be made for use by all domestic shortwave broadcasters.

These area coverage computations do not represent full optimization. The frequency and antenna types may need to be slightly altered so as to achieve the goal of covering 98% of Canada's land mass with a reliable shortwave service from two transmitter sites.

on the money Steve. sw77 is a great all around
portable. good 2 of them. like it more than the
2010. one is used as my number one portable-
around the house/backyard. got it new for $299
in PR about 5 years back. the other one is un-
opened from sony style last year, for back-up.
i feel, this radio will go the way of the 2010
on ebay in a few years. i feel it's the "best"
for my home use. even thought a well used RS-
390 goes in my suitcase when i travel. this
is "my personnel" situation. whatever works
for you is your favorite/best- whatever...

Really? Well, when I was a kid, I'd occasionally take a break from listening to generals ordering limos on 11175 to make statements that were much broader and much more general than the one above. And the chicks loved it!

Facts being stubborn things:

Actually, that was Wesley Clark. He admitted to having made the decision to let the Bin Ladens out of the country on his own initiative. He made this admission publicly, and reiterated it during the campaign.

But I'm sure he was listening to HF radio at the time. So, at least, THANK GOD, he was on topic.

As for the Saudi Prince...he's publicly condemned the actions of the Muslim extremists responsible for the beheadings of the innocent.

I don't suppose that is a nice way to avoid the sound
issues with the IC-R71A??

Much of the distortion with R71, which can approach 20%, are
related to the four mixers. Sometimes a good sound system at the REC
out can make an improvement, depending on speaker selection, but
often, what a higher definition audio system does, is merely enhance
the audibility of the distortion that's otherwise masked by the

'smearing' of the waveform created by the use of ceramic capacitors in the audio path. KIWA offers a nice mod for the audio of R71. And it's reasonably priced. And it DOES clean up the audio path. But the cleaner audio path only served, in the three units I've heard that were so modified, to call attention to distortions that were generated in pre-audio stages. There, currently are no mods to attenuate those distortions.

I know people who listened to R71 for MWBC all day every day. I
was one of them, and I wasn't alone.

Unless you're focussing on the audio, it's very likely you'll
never notice it.

Example, I never really paid attention to the clipping on WLS
until I migrated from R71, to Sat 650. The cleaner audio path made
the clipping distortion (over processing at the transmitter)
noticeable, and on the higher fidelity audio path, irritating.
Compared to WGN, it was a night and day difference. When I migrated
to Fanfare FTA-100, the difference was greater still.

With R71, WGN or WLS...it was AM radio. And there were few
apparent differences between the audio of the two.

If you didn't have a problem with R70, you won't have a problem
with R71.

How bad is the sound on the R71A, really?? I've had
an R70 in the past, and I didn't think it was that bad
there, but fidelity wise a Drake or the Sat 800 is better.
If it's in the realm of the R70 as far as how bad the sound
is, it's livable.

It was Richard Clarke, acting under direct orders.

The Prince's own government has the public beheadings.

Up and down the Gray Line from Vancouver to Mexico, and of course the
''daytimers'' to the East. I'm out of most L.A. stations primary
coverage and the ''monkey chatter'' in the background was way higher
than normal today.

That's not true Grey Line propagation then. That would be more along the lines of sunrise or dawn enhancement.

True Grey Line propagation would be in this case you being at dawn and the transmitter site being at sunrise.

That was at a swanky resort was it not? Where the folks were taken out of their individual bungalows and brought into a main building, hence the very nice buffet?

I rather doubt all of Mexico is that prepared, elsewise they'd be ready to welcome back all the illegals that are here.

No, he was acting on his own initiative, by his own admission.
Publicly stating so. He personally vetted the family members requesting
to leave, and he personally authorized them to exit the country
according to protocols.

>
> The Prince's own government has the public beheadings.

Public beheadings, as barbaric as they are, are part of the Saudi
culture, and part of the legal system. Just as we have executions, and
some quite barbaric here.

There have been conversations about from/to both sides.

Former counterterrorism chief Richard Clarke has testified that he
approved these flights, stating that "it was a conscious decision with
complete review at the highest levels of the State Department and the
FBI and the White House." Testimony of Richard Clarke, Former
Counterterrorism Chief, National Security Council, before The Senate
Judiciary Committee, September 3, 2003.

LOL! What's so interesting, is that you led off with a statement
that's so blatantly false, and when I rebut, you come back and admit you
had knowledge of the truth. So much so that you could correct my
mistakees and then underscore my point for me.

GOD, I love the internet.

"Review", is NOT taking orders as you had stated. "Review" only
underscores exactly what I said, that Clarke had taken the matter on his
own initiative, within the established protocols at the time. Thank you

for confirming that for me.

And that his initiative and his procedures were approved.

Approved. Not ordered. Big diffence. Especially when you're
determined to split hairs to make a false condemnation.

Thanks, David. You made my day.

> allowed to flee without being put in the hot seat.
>

No, in fact, I addressed that at the outset. I said, for those who haven't been paying attention, that they had been fully vetted, personally so, by Mr Clarke, within the established protocols. Which you confirmed and underscored. Thank you.

The point that's never addressed in this matter, one that YOU conveniently turn away from, is that the bin Ladens have openly and sharply condemned Slammin' Sammy over the years, for his politics, the corruption of his religion, and his activities. They had put as much distance between themselves Osama as they could. They were not here in secrecy. They were not here subversively. They were here openly and legally, in peace. Even after Slammin' Sammy's previous attacks on US property and citizenry, including the US Embassy's, the nightclub in Germany, the Cole and the first Trade Center attack. Once vetted by the Federal Authorities, there was little to keep them here, especially in light of the white heat directed toward Muslims of Middle Eastern descent at the time.

If there had been the slightest suspicion about the bin Ladens, they wouldn't have been let on the plane.

So, no, I didn't turn away from that fact. It was part of my original statement. But since you require...I hope spelling it out for you has now made my position clear.

And thanks, again, for your help in making my point. That kind of civility and assistance is rare in USENet dealings.

You better re-think that statement, "Everyone knows Mr. Davies is a devout Baptist tee-totaler."

Lloyd, who pretended to be the Chief of Communications for B.A.R.F. when he didn't have a license to talk on the hf frequencies, lied, swore, and drank that woman's beer, Bud Light and rambled on in a drunken stupor on the Nim Board for quite some time until he saw the light.

The light was a "real threat" of a severe ass whipping, and he took heed.

He is a disgusting individual, he tried to have sex with my prize mare mule a few years ago in my mule barn in Colliersville, Tennessee. I caught him with a stool behind her and he was flailing away at her. He needs to be put away again in another mental institution. But, this time he should be kept for more than 7 months.

Modifying the battery compartment and the speaker are good for people carrying around with their 2010. I use it as a bedside radio -with headphones mostly -.

I have my 2010 (2001D export model with "Air" button) modified with other IF-filters. A little more narrow ones in both positions. 8kc (Murata CFW) in the 'wide' and a 4kc (Murata CFJ) in the'narrow' position. This fits best in the european situation with 9kc spacing on MW BCB in europe and the 5kc spacing on SW BCB. "Fidelity" on SW is something you must not dream of here in europe.... I also added a 2nd filter of 2,4kc (Murata CFJ) to the 'narrow' position with a 2x(2x4) switch. This is *great* for SSB.
I also did the AGC mod and made it switchable for 'fast' and 'slow'. The additional diodes mod to the antenna input to prevent statics blowing the input stage are a real must.
The mods are easy to find in the web.

> Nic.

Well, since the rules for "best" are wide open, I will take that to
mean the portable that gave me the most listening enjoyment.

Probably the most enjoyable as an armchair receiver was the Panasonic
RF-5000b.

It was Panasonic's luggable answer to the Zenith TO and Sony World
Orbiter. It was large, heavy around 22 pounds with an absolutely
wonderful audio. The polished metal and black case was wood lined,
and the resulting sound was delightfully mellow.

It had four antennas, selectable filters (narrow was mechanical), agc

control, bfo, multiple bandswitches across the top and backlighting
for individual bands as selected. With a mortgage one could power it

with batteries. Otherwise a switchable voltage power supply did the
trick.

It was no dx machine, but BBC symphonies sounded great. Of course
audio on AM and FM were superb. With a bfo switch it was possible to

decode ssb. Finding a specific station on the ham bands was
hit-or-miss and a challenge. But the intent of this delightful
monster was armchair listening to broadcast stations.

Sensitivity when new was not great by todays standards, and 30 years
had probably taken its toll on electronics. Still it was a joy to
use for 5 years.

Well, given the limited number of new radios being offered I would look
for a good used receiver from Kenwood, Yaesu or Icom.

> Secondly, why are they all being discontinued?

Manufacturers of shortwave radios are dropping out of the market for
one reason: Far fewer people are buying shortwave radios than were 15
or more years ago. Casual listeners and hobbyists are dropping out of
the hobby because there are many other ways to get information about
the world that are far more stable: Cable TV, satellite TV, internet
news, CNN, internet radio "broadcasts", etc. International
broadcasters are moving from the shortwave spectrum to internet and
satellite broadcasts because they can reach a wider audience and reduce
costs.

The handles on the GE (and it's brothers from Panasonic) actually had a
very practical use. Those radios were somewhat prone to falling over
when bumped. The handles extended far enough to protect the knobs.
And the chrome handles made the radio look like a rack-mount
"professional" radio for an instant.

4643. Wanted: Kiwa Magic Tuning Eye

Ah, yes. The gratuitous oversimplified accusation. Which, by the
rules of logic, may be gratuitously denied.

And so it has.

It's been fun, David. But since you not only know, and understand,
the truth, certainly enough to argue both sides as you have so far here
today, I'll take leave of you now, as my participation in the discussion
is clearly unnecessary.

Have a good day, David.

Look forward to conversing with you again, when the mood strikes.

- Sorry David,

Dan Rather was Probably just reporting innacurate info...

Possibly making incorrect inferences from wind speeds recorded high up
over open water
and extrapolationg to whatever inland place he was at the time

read info in the links below for clarificatin..

http://clemsonews.clemson.edu/WWW_releases/1998/October1998/Peter_Sparks.html

" In the most recent example of Hurricane Georges, the National
Hurricane Center reported maximum sustained winds of 100 mph as it made
landfall.

But Sparks said an analysis of information from data buoys and land
stations by the Hurricane Research Division of the National Oceanic and
Aeronautic Administration put the figure at only 84 mph for ocean
exposures -- which would mean overland speeds would be even lower. "

< SNIP>

" He added that erroneous reports also went out after Hurricane Bonnie,
with the National Hurricane Center issuing reports that a Category 3
hurricane with sustained winds of 115 mph had swept over Wilmington,
N.C., even as the National Weather Service at Wilmington measured and
reported a maximum of only 56 mph. "

- and if you look at this wind speed. / description / effects scale
you can see that a 50+ MPH wind is probably what he was talking about..
A Non trivial speed..
Ever stood up , unsupported..in a convertible going 55 MPH ??

(They Call Him.... " David Road Rash..")

http://www.marinewaypoints.com/marine/wind.shtml

Cozumel has very few trees to slow things down and is ~20 feet high at
it's highest..

- So I Hope the forcasts of wind speed (at the surface) were similarly
exaggerated..

(Still no news..)

> insane"

Are you saying that the development of man's technology has outpaced the development of man's brain to the point that a brain hardwired for a much simpler, cruder world can't deal with the exponentially increasing complexities of the modern world? If so, then I'd have to tentatively agree with you. It would seem to be a function of chaos theory, where a system that keeps increasing in complexity eventually falls apart from the centrifugal force of its own uncontrolled expansion. Our brains developed in a hunter gatherer world, and for 99% of modern Homo Homo Sapiens's existence, that has been the prevailing norm. Even after the introduction of agriculture, life was pretty simple and straightforward. Even 70 years ago like was unhurried and simple, just ask any WW2 vet. Today we have to "multitask" and be on call 24-7. We're continually being bombarded with urgent tasks through cell phones and the internet. Most people feel rushed, can't get enough sleep, and have to work increasingly harder just to see themselves fall further behind. It seems that the stress factor of modern life has stretched our brains to the breaking point and beyond. People work 20 years without any vacations and sleeping 4 hours a night only to snap and end up locked in a rubber room for the rest of their lives. It seems that increasing numbers of people all over the world are snapping under the strain. It is an article of faith that the human mind is an elastic container that can be stretched indefinitely, when that is just not the case. Like everything

else, it reaches a point where the strain is too much and it breaks. Eventually, all of civilization will reach a point where the strain becomes too much. The Muslim world has already reached that point. With no way out of their dilemma, the only option left is suicide.

That's interesting as I heard on CBS radio news earlier this afternoon that at least at that time there were no reports of fatalities on Cozumel but that there was a lot of destruction.

Lots of activity there tonight. For anyone who's interested, here's
what it sounds like from Brooklyn:

renopithicus.tripod.com/5714.wav

Hope this link works. If it doesn't, try pasting the URL into your
browser.

Well that would be a step ahead in promoting more cleaner and efficient
fuel/energy sources. We need to get off fossil fuel.

Hello:

That Alpha Clock that shows GMT in a little window is really a cute Aplet.

Was wondering if anyone knows the significance of the "+", the "u", and I
think also a "v" that shows up occasionally to the left of the first digit ?

Thanks,
Bob

Specifically, the first White, actually Ultra White LED I found that
operated at 1.5V is on page 1550 in the above PDF file. Made by Lumex and
under heading "DSP LEDs Low Voltage LEDs, 1.5V"

Quote: (Sorry about the spacing... Lousy OE Newsreader...)
KEY:
PKG Type, Emitted Color, Lens Color, Forward V (Min), Current (@1.5V), mcd @
2V, Angle, Digi-Key Part#, Price each (1,10,100), Lumex Part#
5mm | Ultra White | Water Clear | 1.5V | 2.5 | 3000 | 30° | 67-1877-ND |
3.39 | 2.83 | 2.55 | SSL-DSP5093UWC

Here's a link to the Spec sheet for this LED...
http://www.lumex.com/images/pdf/SSL-DSP5093UWC.pdf
And webpage it was linked from:
http://www.lumex.com/product.asp?id=1006106

According to the SPEC sheet, it was dated just about 2-years ago, so I would
assume that these 1.5V white LEDs have been available at least that long...

Body handling: HTML body converted to readable text

I found the problem with the radio. TC8, the trimmer capacitor for the low end VCO range was cracked and wouldn't tune.
I looked at the parts list and all that was given was a Sony part number.......no value in pF.
What a useless manual! At least it was only 25 dollars. If I knew what value this cap was supposed to be, I would throw in a microwave trimmer cap.....that is, if I could get all of that plastic for the bandswitching mechanism out of the way.

Lawyer my ass!!!

I wouldn't know about the impersonating part, but the libel won't
stick, as it was the truth. Davies lied, got drunk, posted all kinds of
filth on the nim board. He didn't, and still doesn't have hf
priveleges. So, where is the libel "counselor?" <snicker>

Have you figured who/what you are yet?

Ok being an old Artilleryman myself....I'm getting new hearing aids from the VA tomorrow. They are called Cross hearing aids and it consists of a transmitter...a reciever and a single AF amplifier.....Being deaf in my right ear the hearing aid in that side picks up sound and transmits it to my left ear on 1.8 MHZ

Then both sides are amplified to the needed level by the left hearing aid...Power output is so low that the range is only about a foot at best.

Wild eh?

I'll try to add a link or two with technical info soon.....So tell me ...will I be able to hear CW near 1.8 MHZ ?.....Will I hear static crashes from nearby thunder storms?

Just wondering...

Jack

As we have it, Mr. Davies was given an honorary appointment as BARF Chief of Communications by none other than Mr. Schoenbaum (sp?) himself. While Mr. Davies had no HF license, we are advised that several BARF members did, indeed, communicate with him via e-mail, including the perpetrator of the famous "rrrroooooooollllll ccccaaaallll".

As far as the drunken rantings on the NIM board, we feel confident that this was the work of an impersonator. We stand by our statement that Mr. Davies is a devout Baptist, a tee-totaler, and perhaps even secretary-treasurer of his Sunday School class.

Collierville, you say? Stop by KRBC some Sunday. You'll see what Mr. Davies missed out on. Be some mity-fine sistahs in that palce, dude. And that Popeye's near the corner of Kirby and Winchester - best fried chicken in town. At least it was last time I was by there. I wonder what ever became of the guy who scored my 'fridge box as I was leaving town. He said something about moving it over to a spot on LaMar near the state fair grounds. Makes me wonder what his plans are. If you get my drift.

Aww come on, Bro. Les. Be careful - the Davies family is rife with attorneys at law. If you say the wrong thing on here, I fear you'll get double teamed by Christy and Jim both. Who needs that.

Now as far as Mr. Davies being drunk and posting filth on the NIM board - man that's a far stretch from the Sunday School boy we used to know. Maybe we better get him re-baptized or something.

As for the impersonations, etc. - I suggest you enlist the expertise of the Athens, AL office of the Lewis-Louis Detective Agency. Please pass my regards on to Messrs. Lewis and Louis. Their security and coordination services were exquisite, as usual, for the yearly event at Dayton. Yep, S-F 05 was the best yet. It's one venue that is increasing in spite of declining attendance at Hamvention. Maybe I should send you pictures.

> Where are you?

CHINA LAKE, Calif. -- Two fighter jets based at Lemoore Naval Air Station crashed in mid-air during training on Monday, base officials said.

Base spokesman Dennis McGrath confirmed the crash, which happened about 40 miles northeast of Ridgecrest. He could not immediately say whether there were any injuries and said he would not release the names of the pilots of the two Super Hornets -- a single-seat F/A-18E and an double-seat F/A-18F -- until an investigation is completed.

The investigation "will be rather extensive, but it takes a while," McGrath said, calling training accidents "rare, exceedingly rare."

The jets were not carrying live ordnance, he said.

A rescue team from the China Lake Naval Air Weapons Station, located near the crash site in the Mojave Desert, is trying to find the pilots, McGrath said.

The China Lake Naval Weapons Center is about 100 miles east of Bakersfield.

Don't know of a webpage. Many rx'es have this functionality today.
E.g. Yamaha series especially their compact "pianocraft" sets. Very nice
home stereo set.

It is very similar to my first transistor that I bought with my high
school graduation money in 1957! The difference was that it was
powered by two very large batteries with connectors similar to a
modern 9v battery but larger. I believe that they were a pp9 battery,
which are still available in the UK, but not readily available here,
and are very heavy.
There are battery holders (adaptors) available from the UK that hold 6
"C" size batteries, and have snap terminals that fit the old (larger)
terminals found on these older sets. They cost about 5 to 10 GBP.
Some Roberts (UK) radios ues these older batteries.

I wish I would have kept my GE now that these battery adaptors are
available.

Warren

When Wilson showed that GWB was lying why did they go so ballistic?
Because the nuke thing was the only workable justification. Without
that, the war is a sham.

I don't know about it being 100% based on lies. I do know that Tony Blair, Condoleeza Rice, Donald Rumsfeld and George Bush were all singing from the same sheet when it came to justifying the invasion of a sovereign country. That they were in posession of incontrovertable evidence that Iraq had weapons of mass destruction. When weapons inspectors could find no evidence of those WMD they ignored the information and moved on. When threatened by someone who dared to expose the shaky foundation of the invasion the Bush administration resorted to dirty politics of the worst kind.

Do you remember the guy who went to Nigeria on an official mission to look into a purported plan by Iraq to acquire weapons grade uranium and found nothing. When he found out the dynamic foursome were not only ignoring what he found, but were saying Iraq had intended to buy the uranium he wrote an op-ed piece exposing the fragile foundation the invastion really was built on. The Bush administration could have had the balls to react by rebutting his claims. Instead they chose to expose a CIA agent who had nothing to do with WMD and put her and her contacts at risk. Her only tie was she was married to the guy who wrote the op-ed piece. That is dirty politics on the same level as the Nixon sponsored Watergate breakin!!!

Hi, dxAce - good news, thanks. Usually, in the past, I have heard
these guys on 11734 - in this, your recent observation, have they
actually adjusted their frequency to the standard 5-kHz increment?

Thanks,
Bruce Jensen

It doesn't take Rove to know that the war was a lie. All you have to do is look at the lack of WMD found in Iraq to see that there was no proof.

Holy Smokes!

I'm sitting here minding my own bizz and reading how these hearing aids are AM...not FM on 1.8 mhz.....I'm listening to the local AM station on the IC-718 when I notice static crashes on the radio....an incoming thunder storm so I pull the plugs and antenna connector.

The static didnt stop....Its coming through the hearing aids! LOL

A metal slinky with a MLB on the end and feed your radio with
coax. Use inside or out. Collapses down to a very small package when
not using and works amazingly well. Use it vertically or horizontally.
About the most simple and most effective HF ant. you could use for
apartement life. Dont waste your money on an active antenna, they
are notorious for picking up all sorts of electrical noise, sometimes to
the point of the radio being unlistenable.

I suggest you ask the Kurds and Iranians if and when chemical/
biological weapons were ever used on them. During the 8 year war
between Iran and Iraq,, thousands of Iranians were killed with some
of the nastiest chemical weapons out there, same with the Kurds
(known enemies of Husseins religious and political party). Now
come tell us they never had them..... Where did they go??? BTW
Clinton was the "first" pres. to tell us all Iraq had WMD's

I have no doubt they had them at one time. I also have no doubts that none are there now. But it's outright atrocious and unforgivable if:

A) Our intelligence is this awful, and that the people who were there (Hans Blix, UN, etc.) were the ones that were right while we ran on half assumptions using a telescope a miles in the sky.

B) Our leader was so zealous to fight that he didn't give a rats ass about bad intelligence.

If there were WMD in Iraq, and they weren't destroyed, then they are the same threat to the world and US as they were they day before the war started and someone has them. And if they are still a threat, no one seems to care because we aren't looking for them elsewhere and we have not even mentioned them since.

So what gives?

So you think the public knows everything it needs to about 911??

I don't hate bush but think he's a corp shill who is allowing our country to be invaded my millions of enemy aliens and using Jesus to sell out this country that's all.
But nothing wrong with that. Nothing at all...

OK great. Why didn't we enter the Sudan and stop mass extermination and
slaughter recently? Thousands of women and children are getting hacked up
alive.
Where is bush and the heros?

How about China and it's human rights violations? How about North Korea
where nukes are for sale?

Sometimes I toted a shirt pocket transistor in my shirt pocket when I was in the Army.At Scott Air Force Base,Illinois I usually listened to KWK or sometimes KXOK out of St.Louis,Missouri and at Fort Knox,Kentucky I listened to WHAS out of Louisville,Kentucky and in Vietnam I listened to Armed Forces Radio from that antenna on top of that hotel (I think it was on top of a hotel) in Saigon and sometimes I would tune in some Vietnamese music,real catchy music that was.At Fort Hood,Texas,I really don't remember which radio station I listened to.I am not ashamed that I use to tote a transistor around with me long ago.

Sorry if this is a 2nd post, the network ate my first attemt.

Several months ago I asked a question about why Kiwa suggested
replacing the Si switch diodes in teh IF with Shottky diodes
and suggested PIN diodes for the front end.

I am causing trouble in another group and posed a similar question.
It wasn't that I thought Pete, who has been very helpfull!, was
wrong, it was more to bring the topic up for a general review.
I am seding this to Pete via Email.

I wrote:

Thanks for the information.

This may well be why Kiwa specifies Shottky diodes.

This weekend I may get a chance to take my "diode switch
test jig" into work and test it with a Tektronix Spectrum

Analyzer.

I will look for harmonic distortion and intermodulation distortion. I have a Minicircuits power divider that with a couple of ~10dB pads can be used to join 444KHz and 446KHz RF signals. It ought to be "easy" to get some valid numbers that really mean something.

I am going to send your Email and my response to Pete and post it to the rec.radio.shortwave group.

I am raising questions here before I build. IT is a lot easier to fix during the drawing stage instead of after it is built stage.

Terry

Anyone here with any thoughts?

What type diodes do Drake and Icom use in their high end receivers?

Terry

4761. How Propaganda Works

Newsgroup: rec.radio.shortwave

One of the most efficient tools in the hands of skilled propagandists is the ability to build a wall of disinformation around a particular fact, insulating it from examination without first having to breach the outer walls, first.

The key to seeing through propaganda is to first understand how it works.

Sometimes, it is the disinformation process itself that is worthy of examination. Our forefathers and the Bible say to seek first knowledge, then understanding, which together, yield wisdom.

'Knowledge' tells you how to start a car. You turn the key. 'Understanding' tells you what processes are involved in starting a car, telling you to give the engine time to circulate the oil before revving the engine, what happens if you pump the gas and why, things like that.

Taken together, the person with both knowledge and understanding makes wiser decisions when trying to start a clunker on a cold morning, if you can follow the analogy.

There is a disinformation campaign being waged by several here, the media and the political left against our commander in chief and Karl Rove for allegedly revealing the name of an undercover CIA agent to two reporters. The campaign itself is worthy of examination.

The Democrats and their allies in the press have been throwing around such words as 'traitor' to describe Rove and 'treason' to describe his having, 'revealed the classified name of an undercover CIA agent' who was, to quote Dr. Howard Dean, 'fighting on the front lines of the war on terror' until Rove 'destroyed her career'.

Former ambassador Joe Wilson, has demanded that Rove be fired to 'uphold the dignity' of the president's word when he said he would fire anybody leaking information from his office.

One needs to view Wilson's comments in perspective; the 9/11 Commission concluded that Wilson's testimony was not trustworthy and was discounted accordingly. Wilson claimed he was sent to Niger by Dick Cheney. That was a lie. Wilson testified that his wife had nothing to do with his appointment. That was also a documented lie.

The point isn't Rove; his case is pretty straightforward. In testimony given almost two years ago, Rove freely admitted that he spoke with two journalists, Matt Cooper and Judith Miller.

At the time of his testimony, Rove also signed a blanket waiver releasing any journalist he ever spoke with, on or off the record, from any agreements

of confidentiality.

That release was in effect a year and a half before Miller and Cooper claimed 'journalistic privilege' -- and got real famous real fast. (Watch for a new book called, "I Was a Prisoner of Conscience")

Rove also freely admitted that he mentioned that Wilson's wife worked at the CIA, although he didn't name her by name.

And it was in the context of explaining how in the world anyone as hostile to the administration as Joe Wilson could have been sent, as Wilson himself claimed, (in another lie) at the request of the Vice-President.

Rove simply said he wasn't sent by Cheney, but by the CIA, where Rove said his wife 'apparently' was in a position of authority and could have influenced his appointment.

Contrary to the claim of 'political revenge' Rove and both journalists agree that Rove didn't call them, it was the other way around. Both were looking for background on a story that Rove was waving them off. And as it unfolded, the story was as false as Rove told them it was.

Remember Bob Novak? He was the one who actually named Valerie Plame, by name, two days later, in his syndicated column. Although Cooper and Miller faced jail for not revealing their source, nobody has paid much attention to Novak, or his sources.

One or two die-hard liberals have gone out on a limb and claimed Rove was Novak's source, too, but those in the know kept quiet. Their silence speaks volumes.

Novak was no story at all, but Miller and Cooper became so important to the special prosecutor that he was willing to throw them in jail unless they disclosed their confidential source. He wasn't expecting it to be Rove.

Rove had already given a blanket release from any promise of confidentiality. He'd already told the special prosecutor what he told Miller and Cooper, eighteen months ago.

But Miller is still in jail, and Cooper's naming of Karl Rove as his source to avoid jail, is weak, at best.

Add to that the fact that Plame was no longer a covert agent 'on the front lines in the war on terror' but just another Langley bureaucrat and you really have to stretch to find anything resembling 'treason' in Rove's 'disclosure'.

The only bomb remaining in the liberal's arsenal was defused -- that Rove revealed classified information -- when it was disclosed that Rove learned of Plame's CIA role from Bob Novak.

Bob Novak, the journalist who first revealed Valerie Plame's name to the public, didn't learn it from Karl Rove . . . Novak TOLD Karl Rove!

Rove testified to that effect eighteen months ago -- eliminating the possibility that this is some new White House spin on the facts.

The truth has been out there, all the time. Rove's accusers know it, but even a false accusation leaves an impression.

And an accusation so obviously and patently false kicks in the principle of The Big Lie, whereby anything that outrageous MUST be true or 'they' wouldn't dare say so.

Note how the walls of disinformation are constructed. In order to get to the truth, which is that Rove simply told two reporters what he had been told by a third reporter, one must systematically dismantle the layers of lies surrounding it all.

Before you can get to Rove, you have to dismantle the layers of lies around Joe Wilson. That Wilson lied with he said Dick Cheney sent him.

To know that Rove was correcting the record, you have to know WHERE the record was distorted. You won't find out from the mainstream propaganda machine.

You have to dismantle the wall of disinformation around Valerie Plame. That she wasn't a covert agent.

That she and husband Joe were so 'protective' of her identity that they were the subjects of a pre-disclosure Vanity Fair photo spread. That she pulled strings to get Wilson sent to Niger in the first place.

And that the reason she did so was so Wilson could actively work against the policy of his country during time of war.

But Henry Waxman called ROVE a traitor. Howard Dean said Plame was a 'secret CIA agent fighting on the front lines on the war on terror'. If any of that were true, then any explanation in defense of Rove is irrelevant. So those walls have to be breached first.

You have to breach the disinformation wall that says Rove was motivated out of political revenge. Although all the evidence says otherwise, it sounds logical.

Wilson did make it much more difficult for America to make its case for war to either the UN or America's domestic critics. It would seem that revenge, however petty and vindictive, would be a reasonable motive.

Which is why the mainstream has said little about the fact that Rove didn't call the reporters in question, they called him. For it to be 'revenge' given those circumstances is ridiculous. They called and asked him directly; Why would Cheney send Wilson? And if not Cheney, then who?

Since Rove learned of Plame's CIA role from Bob Novak, to argue Rove knowingly revealed classified information collapses, and the answer to the question was Plame.

Leave Plame out and Rove is left with, "Cheney didn't send him. Don't know who did."

THAT answer would have spawned a new headline; "Rove: Nobody At the White House Knows What They Are Doing".

Now, to the point. How many ordinary, workaday Americans have either the time or the inclination to clamber over all the walls of disinformation necessary to get to the actual truth, as we have here?

Who has the time to research Joe Wilson, pore over the special prosecutor's subpoenas, sort through the disinformation about Wilson, Plame, their involvement in a plot to use the resources of the US government to undermine the policy of that same government, or the minute details of how the reporters interacted with Rove during this alleged 'disclosure'?

Who has the time or the inclination to accumulate all these facts, including the fact that Rove waived any promise of confidentiality more than eighteen months ago, releasing every reporter who ever spoke to him on background to name him as their source?

Instead, they hear that Karl Rove revealed the identity of a covert CIA agent fighting on the front lines in the war on terror, ruining her career, as part of some petty, vindictive effort at political revenge. And they join the chorus already shouting, "Off with his head."

What is the net effect? An administration totally distracted from the existential threat facing it from all sides.

While resources are tied up with damage control efforts, domestic or foreign policy agenda items become secondary, making the administration appear to be what it HAS become, adrift, forced into dangerous compromises, and losing support on every side.

The Bush administration has been in power for more than five years, and this is the closest thing to a scandal in all that time.

Yet it has been rendered all but powerless by the constant drip, drip, drip of false accusations and news plants forcing it to first, deny the accusations, and, having denied them, prove why they are false.

By the time it has breached the walls of disinformation, all anybody can remember is that Bush lied about something. Somehow.

Here is how powerful propaganda is. Somebody out there will come away seeing me as a blind defender of the Bush administration, and that is all they will take away.

They'll miss the fact that what is true has no political affiliation. And what is false ALWAYS does. They'll miss the fact that a weak and distracted administration during a war that threatens our existence like no war in history is NOT a good thing for America, regardless of one's party affiliation. Except the Communist Party, of course.

And they will add another distraction and keep on going with their drivel against the USA and it's commander in chief. That's how these propaganda artists work.

4762. Web Visitors in China Cheered for the Explosions in London

Newsgroup: rec.radio.shortwave
Date: 2005-07-20 00:30:18 UTC

Message-ID: <11dr6r1lc66nnbd@corp.supernews.com>
Source record: 28344

When the 9/11 incident happened in 2001, I was still in Mainland China. I remember one female colleague told me the news with a big smile and lots of excitement. I could not understand why she did not have any sympathy for such a tragedy, as she was a very good and kind person. Then, when I saw that almost all members of the CCP expressed their excitement and even congratulated each other on the tragic death of American citizens, I started to understand my colleagues. They are people who are educated by the CCP, and who have had hatred instilled in their mind by the CCP.

When I heard about the explosions in London, I expected the public opinion in China to be the same as before. So I visited the two popular Web sites in China, SINA.com and SOHU.com. It was as I expected. Only the "indignant youths" (people brought up in the tradition of the CCP) are less cultivated and less human. People who don't know the situation in China might have the impression that they are visiting a Web site for terrorists. "The education in China causes generations of the Chinese people to lose their human nature. Web sites are strictly controlled in China. Publicly cheering for terrorists, however, can be freely spread on the Web sites. We can easily see the official direction of China." This was the opinion of one of the visitors to the Web site. If you read over the words of some Web visitors attached at the end of this article, you might find that the bombers who carried out the London explosions are better than the Web site postings from China. At least they do not publicly encourage people to eliminate London with an atom bomb.

Read through the entire 3 page thread for a good synopsis. Including a propaganda by a CCP plant.

http://www.abovetopsecret.com/forum/thread131954/pg1

By the way, you will often hear Falun Gong mentioned. Falun Gong is a "passive" non-violent religious branch of Taoism. It is not a "cult". If you live in N.Y.C or San Fran. or any city with a large population of Chinese you can meet Falun Gong practitioners yourself and get a breath of fresh air from their kind and gentle nature. Most of them are elderly folks concerned about their health and enjoy the exercises they perform in a group early mornings in the parks. Benign folks in every way.

Ever since the CCP banned Falun Gong (They had obtained a very large following, too large for the CCP's comfort.) the CCP has used their massive propaganda abilities on a global scale to continue to refer to it as a "cult" and publish false stories. They went so far as to televise a fake suicide by an alleged Falun Gong practitioner dousing himself with petrol and setting himself on fire in Tianenmen Square. It was found to be a complete fake.

Be very careful, the CCP is a master of propaganda and plants news stories and pro-CCP stories in the most unexpected places. They have a fairly large department which does nothing but monitor blogs, groups, etc. and post pro-CCP comments on the internet.

The revelation that China's army of censors and monitors of the media and the internet have been instructed to intervene in internet discussions under false names and lead the discussion toward the sort of conclusions of which the party would approve is an index of the desperation of the authorities. Mere excision or suppression, of which there has been and still is plenty, is apparently no longer enough. Now the debates arising among the nearly l00 million net users in China are to be infiltrated by cultural double agents.

China's secret internet police target critics with web of propaganda

"In the information age and the internet age, the most important and critical mission in front of us is how to seize the initiative on internet opinion and how to seize the high point of internet opinion," the paper quoted the deputy director of the local propaganda department, Zhang Fenglin, as saying.

Applicants for the job - mostly drawn from the propaganda and police departments - were told they had to understand government policies, know political theory, be politically reliable and understand internet technology. Successful candidates have been offered classes in Marxist theory, propaganda techniques and updates on the development of the internet around the world.

A summary of objectives declared that commentators should "be proactive in developing discussion, increase control, accentuate the good, avoid the bad, and use internet debate to our advantage."
...
http://www.guardian.co.uk/china/story/0,7369,1506016,00.html

China's secret internet police target critics with web of propaganda

China's communist authorities have intensified their campaign against the party's biggest potential enemy - the internet - with the recruitment of a growing army of secret web commentators, sophisticated new monitoring software and a warning that all bloggers and bulletin board operators must register with the government or be closed down and fined.

If some foreign power had troops in YOUR country, would you like people showing up to help fight the occupation? And in your case, if they just happened to kill a few thousand Democrats, it would just be the natural progress of things, wouldn't it?

Your chance is coming. Some people are predicting civil war within the next decade, thanks to the scum now controlling the political process in the US. Note how the feelings of hate towards your own countrymen are being cultivated. It's not an accident.

It's not an accident that CanaDuh sucks either. It's just the natural progress (or lack thereof in this case) of things.

Now go stuff your face with some poutine, 'tard boy.

It stands for Magnetic Longwire Balun. Its really not a balun ,
rather it is more of a transformer to match the impedance of the
antenna to that of the radio..... roughly 50-60ohms. Its usually
a torroidal magnet with 2 windings, a primary and a secondary.
They work very well for their intended purposes. They are 35-45$
but are worth it IMO. Do a google search for them and read all
about them.

Because they are not a threat to anyone outside of the country.
Why should we send troops somewhere where there is just a civil war
going on? We cant stop all the misery on this earth, nor should we try.
>
> How about China and it's human rights violations? How about North Korea
> where nukes are for sale?

Not many people, percentage wise really gives a damn about China's
human rights violations. Once again they arent a threat to anyone outside
of China. N. Korea is run by a psychopath that is hard to take seriously.
They havent "done" anything yet, except huff and puff. The retard that is
running the country isnt too far gone to know if he wants to start a nuke
war he knows his country would be toast within 30 minutes. By the time
our subs got the launch command and send their multiple warhead
missiles at N Korea it would all be over very quickly, and he knows it.
One of our subs has 10 times the nukes that N Korea has total. The
discussion was about WMD's and Iraq,,, dont pull the bait and
switch routine.

Your posting is exactly what you accuse the other guys of doing. I seem to remember the phrase "obstructionism, negativism, and vitriolic rhetoric" as being charges levied by kangaroo courts in totalitarian states. Stalin and Mao come to mind. They had show trials for anyone perceived as a threat to the system. Some evil countries have now dispensed with even the show trials.

Hmmm. I wonder what kind of argument could be made that Iraq wasn't exactly "sovereign", given the fact that they signed a conditional surrender agreement and then failed to abide by it? And of course, under those circumstances, the original war is still on.

You might think it was for nothing but there are millions
of people all over the world that dont think that way. Have you
seen the recent polls on Bin Laden and terrorism lately?? Most
of the civilized world is getting real tired of this BS and want an
end to it. I dont think you libs think in the long term. You think
emotionally and not with logic. Using your logic WWII was for
nothing.

A lot of muslims are getting fed up with Bin Laden.(If in fact he is still alive,which I doubt) There are some folks on our side over there who have nukes and some folks who are not on our side over there who have nukes where Bin Laden is supposely hiding out (they know where he is ((if he is still alive)) and we can't just step over there (yet) and grab him because of that.

NJ...

4796. My Journalism course has arrived. Interview number ONE!

Newsgroup: rec.radio.shortwave
Date: 2005-07-20 02:49:50 UTC
From: m II <None@owl.nest.org>
Message-ID: <iZiDe.138480$9A2.69367@edtnps89>
Source record: 28376

Interview with the Ace 2005

m II: So, Ace..I'd like to thank you for this opportunity. I'm sure both your fans and foes in rec.radio.shortwave will appreciate a deeper insight into the workings of that wonderfully convoluted computer like brain of yours.

Ace: Yeah, but they're ninety percent 'tards, like you are you moronic screwed up CanaDUHian idiot...

m II: yes, well...tell us about your childhood, Ace, Do you remember your early years and teachers?

Ace: Yeah, but they're ninety percent 'tards, like you are you moronic screwed up CanaDUHian idiot...

m II: Surely some of your relatives and peers had an effect on your formative years? Weren't there ANY role models in your youth?

Ace: Yeah, but they're ninety percent 'tards, like you are you moronic screwed up CanaDUHian idiot...

m II: Well..I'm looking at the person behind the obviously rough and weather beaten face. What world experience you must have had to shape those character lines on your face...

Ace: Yeah, so grade five was hard, 'tard...you moronic screwed up CanaDUHian idiot. so what..

m II: At this point, gentle reader, the interview ended. The Ace decided to closely examine the sidewalk for minute cracks and remained in that horizontal position for at last three hours, at which time I excused myself in the finest of Canadian manners and tradition. I admired his devotion to this unique hobby, as his neighbours all said he does this on a regular basis.

Another interview? Who knows what the future holds. We're now getting leads on a dog molester in Mississippi and a real US Master Sargeant who practices necrophilia on cancer victims' corpses.

Stay tuned...

m II

Well, if you stayed sober long enough, you'd know that there is now an illegal war being fought on Iraq by the United States and assorted hangers on. This war was started against the United Nations wishes and was based entirely on lies and imaginary evidence.

Your comprehension skills will improve after you stop the booze, Ace.

Some industries are moving to the third world. Really cheap labour and no pollution laws. Some industries can't pick up and move their operations. The answer is easy., You bring the third world here. Same result. They pay lower wages and greatly increase the bottom line. The beauty of this is that the workers are illegals, so it's REALLY hard for them to complain about slavery.

Source record: 28388

You know friend from one ultra conservative Republican who has not
lost his mind to you,

America could do an awful lot for itself if it would just get it's
troops out of other people back yard and mind our own business as
Sweden, Switzerland, Austria, Denmark, Canada, Iceland, and many other
countries do.

These people that you claim hate us are reacting the same way you
would react if you woke up one morning and found hundreds of troops
from the Middle East stomping around in your yard and neighborhood.

That's why the Golden Rule says "Do unto others as you wish to be done
by.

Love thy neighbor as thy self.

It's not really about one party or the other. America just has to
understand that it cannot expect to rule the world when we have
already dropped two atomic bombs on Japan killing over 500,000 people,
sprayed Agent Orange on our own troops in Vietnam killing and injuring
tens of thousands, put sanctions on Iraq back in 1991 that have
resulted in the deaths of over 750,000 innocent babies, children, and
pregnant women.

Why would any sensible Christian person think that the world is going
to like and respect us when we have been destroying people all around
the world for the last 100 years?

How about them apples? :-)

Applebees allows White Nationalists to terrorize African Americans,
their friends and families, and they refuse to pay damages to make
amends for the physical and psychological destruction that this home
grown terrorism causes in their restaurants.

From A wise non-biased Ultra Conservative Black Republican who hasn't
lost his mind and
his ability to reason and think clearly about what is right for
America, and what is wrong.

White Supremacy is a Polar Bear from Hell
That eats away at African Americans intestines
Every waking moment of their lives
To remind them that the big lie about their being inferior to "whites"
Is accepted as Gospel truth by MOST of the Hellhound
white society that is destroying them.

Well,

I have had a YB 400Pe for a few years and I bought the Satellit 800
last week.

I put them side by side for a few hours and the YB 400 picked up
everything that the Satellit 800 picked up.

The 800 had better sound, but when I use headphones with the Grundig
it sounds just as good or better.

The 800 also seemed to hold on to signals that were coming and going a
little better.

Other than that I didn't notice any difference; except that the 800
costs about five times as much.

So I will take the Grundig YB400 PE any day.

Thank you.....I appreciate the info. It is interesting that semiconductors would degrade in that manner, unless they were being run near their design limits. If this is the case, the parameters were not derated properly.
I ran into the same thing with the Lowe receivers. They are using a 4569 to divide the uP clock down to the BFO injection frequencies. Every so often, these chips fail when brought up to operating temperature. Aside from the dense plated through holes, these radios aren't nearly as bad to service as that 6800 is. Anyway, it did turn out that the trimmer was indeed cracked. I have repaired the unit and it is going back to the owner. It was the most incredible nightmare to repair, but I was able to fix it.
The fellow that I made the deal with is giving me a Grundig 3400 as a consolation prize. That radio is a little bit bigger than what I would normally use, but it is good trading material.

Wasn't very kind to either you, or CanaDuh. You're both never moved beyond puberty.

As for your 'sovereignty' that really can't be the case as you still have a Queen on
some of your money... You're really still a colony.

Continue to tote and live in your dream world. You'll get a rude awakening soon enough.

Because I know deep down inside you are really a good white person.
You are not one of those millions who hate people of color, avoid them
socially, don't want to hire them for the better jobs even when they
are the best qualified, don't want you children dating, marrying, or
befriending them.

I know you feel that way because some of your neighbors told me that
you were a GOD like human. They said you are afraid to stand up and be
vocal about these things.

So I was just speaking for you. giving you a little boost in the right
direction.

Now you should have the courage to do research and continue to
increase your knowledge in an accurate manner, and rid your mind of
what is left of the junky, garbage programming that had been put in
your beautiful brain computer by your family and friends as you grew
up.

Peace.

4824. Joseph Wilson is a true hero; patriot

Newsgroup: rec.radio.shortwave
Date: 2005-07-20 13:50:35 UTC
From: David <rickets@knac.com>
Message-ID: <ljlsd19cet93iufde5ld8q0iipaaah5kk3@4ax.com>
Source record: 28254

Anybody who denigrates this man is the enemy.

'' In 1991, President George Bush introduced Joseph Wilson to his war Cabinet, calling the veteran diplomat "a true American hero." By any standard, Wilson deserved such praise. As the senior U.S. diplomat in Iraq during Operation Desert Shield, the massive U.S. military buildup in Saudi Arabia after Saddam Hussein invaded Kuwait, Wilson was responsible for freeing 150 American hostages seized by the Iraqi dictator. Indeed, he was the last U.S. diplomat to meet with Saddam Hussein, in August 1990, following Saddam's notorious July 25 meeting with U.S. ambassador April Glaspie, who failed to warn Saddam not to invade Kuwait. Wilson advocated a muscular response to Saddam's aggression, and though he sought a diplomatic solution, supported Operation Desert Storm. During his highly decorated 23-year career, Wilson also held the position of political advisor to the commander in chief of the U.S. Armed Forces in Europe and was ambassador to Gabon.

In July this year, Wilson staked out another claim to heroism when he revealed in a New York Times piece that Bush administration claims that Saddam was seeking to acquire uranium from the African nation of Niger were known by the Bush administration to be false. In February 2002 Wilson himself had been assigned by the CIA -- acting, ironically, at the request of Vice President Dick Cheney -- to investigate the uranium allegations in an attempt to strengthen the administration's arguments for war. He reported back to his superiors that there was no basis for the claims. But in January 2003, to Wilson's amazement, President Bush made the same discredited claim in hyping the terrifying nuclear threat posed by Saddam. In the New York Times article, Wilson wrote that that "I have little choice but to conclude that some of the intelligence related to Iraq's nuclear weapons program was twisted to exaggerate the Iraqi threat."

Along with a host of other revelations about cherry-picked intelligence, bogus claims about Saddam's weapons of mass destruction and arm-twisting from administration officials to find usable evidence, Wilson's bombshell made it clear that the Bush administration had decided to go to war first and come up with the justification for it second. As 9/11 hysteria faded, WMD failed to turn up and the invasion's aftermath turned brutally ugly, the fact that false evidence was used to sell the war became a major political problem for Bush. Questions about his leadership of the "war on terror" -- the heart of his appeal -- became louder. The GOP had to stop the bleeding. A decision was reached that the best way to do that was to take Wilson down. ''

No, WWII was not for nothing, but since bush has taken away so many of our civil rights, like the new emiment domain laws that allow private parties to just take your property away from you at will. Just thank the highest law court in our land for this. Bush says nothing against it.

So, the soldiers that died in WWII for these rights did die in vain thanks to bush and his buddies by him just reversing these laws. Bush is one of the worst criminals this country has seen. He kills our young people in this country for oil, doesn't make the car company's produce more efficent cars so white cracker trash can drive their big monsters one to a car.

Bush licks out mexico's "presidents" Vicent Fox ass every day by allowing millions of illegal and unknown people to enter our country every day taking jobs away from Americans and forming drug pushing gangs that the FBI now has to hassle with.

We have military all over Afganistan, but we harvest a BUMPER crop of heroin out of there. He allows TONS of drugs to enter our country thru mexico. He does more for mexicans then Americans.

I think he is a dumb hick faggot and his followers are just as bright as him.

Look,

you can't convice these people. Apples don't fall far from the tree as you
can see.
How about the supreme court allowing private parties to STEAL your land at
will to build a mall? Their man bush seems to like it so I guess these sheep
brains like it too. So how, how you can argue with people who don;t care
about this?
You don't. You do your thing and let these complete morons love this
administration.

Great thing is after 3 more years bush goes back to his horse ranch to lick
Vinceta Fox asshole out. We will never see his "dick up his ass" walk again.

But we had 911 on bushes watch which did not happen to every president. But,
he wants to make 12 million illegals here American citizens and he knows

this makes more garbage come over our border. He is a traitor to this country and uses Jesus to do it.

One day when they take your home from you for a private developer, and the police arrest you from protecting your own home, you'll understand then.

Lucky

The first WTC bombing plot was hateched during Herbert Bush's
Administration and happened a couple weeks into Clinton's Presidency.
Clinton promptly found those directly involved and locked them up.

About two and a half years ago,I got a phone call from Betsy Myers.(that woman at nbc or whichever one of those commie tv networks she works for) I didn't reckonize her voice on my phone and I didn't tell her my name.I said,Who is this? She said she is Betsy Myers.I slammed my phone down and hung up.Seee,what they do is,they phone around the country and get peoples opinions about different kinds of things and then they spin and twist those opinions so they come out on tv or wherever the way they want them too.

Civilized world = all people who are "not" living like this is
the 16-17th century like the radical arabs are doing. This crap
has been going on since the Crusades, and its time to end it.

4850. Koreans stop "broadcasting" at each other across DMZ by blasting speaker?

Newsgroup: rec.radio.shortwave
Date: 2005-07-20 17:19:36 UTC
From: Joel Rubin <jmrubin@ix.netcom.com>
Message-ID: <IIvDe.14389$aY6.5610@newsread1.news.atl.earthlink.net>
Source record: 28280

There's this old hippym, Travvus T. Hipp, who does some morning commentary on radio station KPIG near Sta. Cruz, who mentionned today that the Koreans near the DMZ had been playing sh*t at each other via loud speakers and that they had stopped. He then gave some pollyanna-ish junk about how they were going to drop all their hostilities and reunite real soon now.

(Well, he was totally right about the war in Iraq - it would be easy to win the conventional war but not so easy to win the subsequent guerilla war.)

Has there been any significant change in radio broadcasts between the two Koreas?

Of course, broadcasts from North Korea are best when you can't understand them. I understand that the rotting corpse of Kim Il Sung is still the head honcho and in the beginning, Kim Il Sung created the heaven, earth, and the Communist Party of Korea. The Great Playboy er um Dear Leader can't match up.

Dunno why I'm weighing in here. Bored, I guess. Answered all my email.
Nothing's happening on 5714. If there is, I can't hear it above the noise
floor.

But I must take exception to your position that "the bulk of the hate
eminates from the left..." Seems to me that the "hatred", the truly
offensive and vitriolic commentary really took off with the right wing talk
shows on bcb radio. Especially during the Clinton administration
(encouraged by Clinton's bad deeds). Remember when Rush Slimeball called
Chelsea Clinton "the family dog"? Remember Mary Matalin whining "Guess what
Clinton has done now!" on a daily basis? Mention Hillary's name and our
friends on the right go ballistic, and she still won her senate election,
and will probably win many more.

Tune in Rush, Hannity, Ingraham, et al, and the message is the same:
"Liberal elites" hate the president, hate the country, want our troops to
fail, want to free all the criminals and kill all the babies.

Democrats, liberals, the left, didn't invent hatred. I'm a Democrat. I
don't hate the president. I don't hate his brother Jeb, my governor. And
if I disagree with the President, it doesn't mean I don't support our
troops, no matter what some jerk on the radio says.

Thank God that reasonable men, like all of us on rrs can discuss our
differing views in a climate of friendliness and mutual respect!

Greg
Not elite!

I had a letter published about him when the newspaper asked who had the
greatest aggregate age for new parents. I said it was Scotty and his missus.
80 + 43 = 123 years.

Of course it did. But I don't Clinton received 52 warnings about
terrorists using airplanes, which he shared with his attorney general
but now with the general public.

I doubt that Clinton would have shrugged off a briefing paper called
''Bin Ladin Determined to Strike Inside USA'' and gone fishing.

Bush let 9-11 happen because PNAC needed a ''Pearl Harbor like
incident''.

The obvious answer is the news media.

But it's pretty clear both events were done by muslim terrorists, and as far as I know, none of them were journalists.

Hi Mark and I do know this,

But, for our cowboy bred and blood American president {AND our Congress and Senate} doesn't speak out on such an outrageous ruling then this is not a free country anymore. You can't even have the American dream of buying and living in a house for your retirement for the rest of your lives. Someone might come along when you're in your 80's taking your home from you to buld a hotel or mall.

This is a very big deal. I know more liberals voted on it. But guess what?
I'm not a liberal in the true sense of the word.
I don't care who is in office, Democrats or Republicans. If they run the country like crap and sell if out to other lower class entities, I would be just as mad at them.

I have no allegiance to any one party. Whom ever is best for the job. The facts are the facts but some people won't talk about them. They'll resort to talking about the poster cause they have nothing else to say to defend their super intelligent leader and his laws and how he treats legal Americans who helped build this country up honestly.

Yes, let's just give it away to them....OK

Lucky

Let's not forget that mexico loves us so much and does so much for us. That if they come here and MURDER one or several of our citizens, they can flee back to mexico and they won't turn him or them over to us if we have a chance of giving them life or the death penalty. Fox must be laughing his ass off at us fools cause he would be right.

They can sneak into the country, kill and just get back to Mexiville and be home free safe and protected by the mexican gov't and police from us.

I saw a soccer match recently. It was Americans vs Mexico. When we got a goal, they all chanted "Osama, Osama" over and over against us. I could Fu'en believe it.

But bush, who looks like a deer caught in the headlights when on TV, loves that country and it's lower class illegals over us and thinks that's fine and dandy.

What's not bad? Come here, get free medical and housing, welfare, drivers lincense, take jobs away from us then if they happen to kill one of us, they can just run back to mexico. Looks like a sweet deal for them all around.

BUT WE, must abide the laws of the land which means giving up your home by force whether you like it or not. The saddest day in the history of this country will come when the first cop puts handcuffs on a fellow American cause he wouldn't get out of his home when a private party buys it.

Watch for that day...

Lucky

Many politicians have expressed outrage over this decision. The
recently voted on a bill to deny federal funds to communities using
eminent domain to force individuals to sell their property for profit
making ventures like hotels and malls.

It passed 231-189 with 192 Republicans and 39 Democrats voting for the
bill. 31 Republicans, 157 Democrats and 1 Independent voted against the
bill.

Here's a link if you'd like to see how your representative voted:

< http://clerk.house.gov/evs/2005/roll350.xml >

Amazingly, many people never bother to find out how their
representatives vote on issues that are important to them.

President Bush isn't a position to do much other than fill vacancies on
the Supreme Court with justices who are strict constructionists - and
likely to overturn the decision. Hopefully Judge Roberts falls into
this category - but he's replacing someone who already voted the right
way. Odds are he'll need two more appointments before this decision can
be overturned.

In the mean time, you can pressure your local government to pass a law
to prevent this case from being used to take property in your community.

In a high rise building, you're probably safe - odds are you have quite
a few homeowners per acre of land.

Florida area seems to have voted yes.
But, it's not whether I'm safe cause I'm in a high rise, it's the right
being taken away from us in general. It's so outrageous it's
incomprehendable to me. I still can't believe the supreme court would pass
such a law. This is NOT the America l grew up knowing. Things are really
changing with devestating results due for us.

So let's see, some dicator in some foreign lawless country that stones
people to death can just take your land, and so can they in the United
States of America under the command of G.Bush

So, what rights do you people think you really have left???????

This is an issue where you appear to be a conservative, but you're
assigning blame to the wrong person.

At the time of the decision, President Bush hadn't appointed any Supreme
Court Justices - he wasn't in a position to influence the decision.

The President can't overrule the court.

Unfortunately the whiney 'tard boy has absolutely no idea how things 'work' in
the real world.

And it would seem that about half the population of our country is made up of
exactly the same 'tard boys and girls.

4880. Zimbabwe to launch new propaganda radio station: pay Russia to jam new station, it is cheaper...

Newsgroup: rec.radio.shortwave
Date: 2005-07-20 21:19:13 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <dbmf4h$o2k$1@xuxa.iecc.com>
Source record: 28409
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave,soc.culture.usa

Several solutions are suggested:

Russia:
Why not pay Russia to jam the new Zimbabwe propaganda station?
Russia can summon up to 1MW carrier power for jamming.
Russia may have HR 8/8/1 (33 dBi isotropic gain) Curtin array antennas aimed at Africa.
The Russian jamming approach is cheapest, and no money is spent in Africa.
For the most part Europe, nor anyone else has been interested in spending any money IN AFRICA since decolonization.

Iraq:
If Balad were reactivated, it could be used to jam Zimbabwe.
http://cbc.svserver.com/cbc.svserver.com_non_ssl/balad.html
Balad aka SED (was commissioned to ABB / Telefunken as Balad).

Hypertitantic-geopolitical-hyperrealism commentary:
In spite of the great propaganda value that could be achieved by activating all of Iraq's high power MW and SW transmitters, it is probably cheaper for the US and UK to just let their military units be killed off -- and not have anything to do with the minutiae of manipulating Iraq's entire media-broadcasting infrastructure. I believe this political habit was the creation of Kissinger during the Vietnam War when similar circumstances existed with respect to mass media in the region.

> changing with devestating results due for us.

In case anyone here cares about the truth --

One, the Supreme Court does not pass laws. Legislatures pass laws. The Supreme Court decides whether the law is constitutional or not.

Two, in the case you're all wetting yourselves over, the Supreme Court was reviewing the constitutionality of a law passed by a local legislative body.

Three, the Supreme Court held in this case that "economic development" is not automatically an unconstitutional use of the power of eminent domain. It was asked to declare that economic development is NEVER a public use under the Fifth Amendment, and it couldn't do that, because there are plenty of circumstances in which economic development is a perfectly justifiable "public use." The construction of any big hydroelectric dam, or a long-distance power transmission line, are two very common examples. Neither could be done without the forcible taking of private property by eminent domain.

Four, people seem to believe that eminent domain didn't exist until this recent decision. It's been around since the beginning of this country.

Five, "conservatives" are traditionally "strict constructionists" in constitutional matters. Remember Roe v. Wade? Conservatives hate that case because there's no express language in the Constitution guaranteeing a right of privacy, the Supreme Court in 1973 found that right of privacy in the "penumbras" of the Constitution -- i.e., you can read it between the lines. Well, guess what? There's no express language in the Constitution which says that economic development is or isn't a "public use." It only says that if private property is taken for a "public use," that fair compensation has to be paid. So, this recent Supreme Court decision is a conservative, strict constructionist decision. Yet, somehow, the so-called "conservative" loudmouths of talk radio have decided that this is a "liberal" decision being foisted on us by "liberal" judges. You all want the Supreme Court to "read between the lines" and find that the government can't take private property for economic development. Logically, if you're against this recent decision, you should also be a supporter of Roe v. Wade. At the same time, the radio loudmouths rant and rave about how the Supreme Court is out of control, creating laws without any accountability to the public

-- yet, in this case, the loudmouths wanted the Supreme Court to do exactly that -- create law which is not in the Constitution! You so-called "conservatives" better figure out exactly what it is that you stand for. You're pretty confused right now.

Six, eminent domain is a legislative creation. Your local or state government creates it and controls it by statute. It's not unconstitutional, the Supreme Court can't overrule it. You don't like it, quit bitching about the Supreme Court and go to your legislators and make them change the law. They are the ones with the power to declare, by statute, that economic development can never be a "public use."

Seven, none of you could possibly have passed your high school civics classes. Some of the loudest of you loudmouths in here claim to be the most patriotic -- ferchrissakes, you're showing a lot of ignorance of the way this country's government works.

The ANARC site and group closed down several years ago. All stuff on it is
now outdated. As for NASWA it still exists on the East Coast. Give it a
Google search and you will find it quickly.

>

[SSSSHHHHH - Raffles is generally considered something of a tourist trap,
but don't tell *her* that.

I do hope she got the souvenir glass that her Singapore Sling came in,
though...]

> Doubt the humidity was worse than Hotlanta, though. There is nothing
worse
> than Hotlanta in summer. <yuck!>

Both temps and dewpoints are generally lower in Singapore than in Atlanta.
Mary Ann was probably all huffing and puffing because she actually had to
get up and get out of her house and *go* somewhere. And most everything in
Singapore is air conditioned to the max, some guidebooks even recommend
bringing along a *sweater* to counter - act the a/c chill...

And yeah, the heat in Atlanta during summer is SO bad you can actually
smell it :-|

I just ran across a set of 3 memory chips for the Grundig Satellit 700.
These things are going for $15-17 on ebay. Last time I posted some, I sold
them for $5... I'll let these go for the same. Postage to the US would be
about 60 cents for first class.

If I'm not mistaken (don't bet money on it), the Supreme Ct's decision approved that unholy eminent domain policy only where local (or state?) laws didn't prohibit it. Supposedly, we in Florida have more protection under state law. And I heard a news headline, but not the details, that other states are scrambling to enact similar laws to protect their citizens' property rights. Hope that's true. If so, the Sup Ct's ruling, heinous as it may be, won't affect most of us.

-----BEGIN PGP SIGNED MESSAGE-----

Funny, and I have only taken college psychology, but I would venture to guess that only a
teenage or a child molester could get very excited by a woman breast feeding. Of course the
teenage would be excited because he would remember the excellent meals he received by such.

The adult male becoming excited should be given a psychiatric examination and evaluated how
best to treat his perversions.
```

But, if there were virtually ﷺdrovesﷺ of these sick fellows, it would not surprise me. Just look at how many sick, twisted, vile homosexuals/queers/lesbian/perverts there have been proven to exist in the world. Growing up I was informed such sick people existed in the world, however, I thought them few and far between, and my chances of meeting them slim.

```
Better to know the evil you face than to live in ignorance, I suppose.

> tens of thousands,

Nobody in the U.S. is set upon ruling the world. Your ignorant comments are
simply repeats of propaganda.

> put sanctions on Iraq back in 1991 that have
> resulted in the deaths of over 750,000 innocent babies, children, and

>

You need to dig around and research the U.N. oil for food scandal. There
you
will find the motives of why the Socialist EU preferred to prolong the
program REGARDLESS
OF WHAT SADAMN WAS DOING WITH THE MONEY!

> Why would any sensible Christian person think that the world is going
> to like and respect us when we have been destroying people all around
> the world for the last 100 years?

Wow! What public schools have you been attending?
Your lack of depth of historical knowledge is incredibly shallow and warped
and reeks of propaganda.

> Applebees allows White Nationalists to terrorize African Americans,

It is sad that you live in a society which you perceive as such.
A wise sailor once deduced -
"If you can't change the wind, change the sail."
If that doesn't work, get a new sailor.

The world is an awfully big place, Clyde. And I can promise you that not
every neighborhood in the U.S. is even remotely as racist as you perceive.
I can tell you that from experience. Further, there are many countries
which are far far worse, far worse than any racism you have experienced in
the U.S. That to is from experience. So if your sail ain't workin' find
another sea to sail in.

same way as Jackson gives orders to the armed forces. Now doing that is
one the thing that might get him impeached Not sure of the "kelo"
ruling and enough ahs been snipped But executive force is always
possible, however that trump can only be used as a last resort

Oh, I don't know...how about everytime they violated the no-fly zone? Or everytime they painted an American fighter plane with targetting radar while said aircraft was patrolling that no-fly zone? Hostile and provocative actions on the part of Iraq were to -cease-.

They didn't, therefore....

And lest we forget, the very existance of a no-fly zone puts the lie to the "sovereign nation" argument, which is a silly phrase anyway. Japan was sovereign, Germany was sovereign, Korea was sovereign, etc. Is it okay for us to attack non-sovereign nations? That's the unintended implication. Does that make Canada a target?

Frivolity aside, Iraq was -not- sovereign according to every usage of the word that I'm familiar with. They didn't have the final authority over their own affairs. We had to baby-sit them, and that makes them less than sovereign.

Here's more specific info on their failure to abide.

http://tokyo.usembassy.gov/e/p/tp-se1692.html

> Did the violations warrant destruction of
> the country

Of the military and political aspects and assets, you bet your ass. Saddam did. Unfortunately, he bet a lot of other peoples' asses as well. And unfortunately, that's not our problem and can't be helped. Personally speaking, I'd have been -much- stricter than Bush the First was. Keep lighting our fly-boys up with radar and we'll hand you your ass is one

example. And I'm not talking about just taking out the radar installation; that's a given.

But that's just me.

Especially
> at night.

Same here in Chicawgo...the dewpoint here lately has been higher than
Singapore and other "warm" places...Atlanta is positively beastly.

Singapore (and KL I'd suspect too) has the benefit of tradewind breezes at
certain times of the day, DC and the hot humid US midwest, etc. do not...

Daily temps in the mid - 90's (30 - 35 Centigrade) here, may hit 100 on
Monday...

Singapore and neighboring areas, being a few degrees above the equator,
don't have a wide temp range, the temp rarely goes above 91 F. or so and 70
F. is almost a cold snap...

I've known folks who have lived in Singapore (UK ex - pats) who did not have
air conditioning in their home, they cooled off in their swimming pool, had
fans, and the architecture of their home helped cool down things so it was
tolerable.

In fact if I had more through ventilation (all my windows face the south)
and a screened sleeping porch I could probably survive okay without a/c in
the Midwest heat. Modern apartments though are generally not designed this
way :-|

4931. A domestic shortwave broadcasting solution for Canada (DRM)

Newsgroup: rec.radio.shortwave
Date: 2005-07-21 11:27:21 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <dbo1c3$2v0$1@gnus01.u.washington.edu>
Source record: 28571

CKZN-CBU transmission solution:

http://cbc.am/cbc-src.htm

Canada's rural and northern populations are for the most part not fully served by AM & FM radio stations during daytime hours. Although CBC North runs an extensive AM / FM and TV network for northern Canadian residents -- there are still millions of square kilometres that the CBC-SRC will never be able to reach with its current broadcast network.

The lack of daytime information radio network service does not help northern and rural residents in their day to day lives. It goes without saying that the lack of access to an information radio service in Canada's remote regions increases the demands on expensive to deliver federal and provincial services. Poor delivery of basic government services has led to a negative relationship between northern and rural residents and Canada's southern urban population.

In a matter of speaking CBC-SRC has pretty much failed to meet fully the news and information needs of all northern and rural residents, since these residents fell into the revised CBC-SRC mandate in the 1970s. This mandate is providing a basic information radio service to all of Canada's regions.

Most of Canada's populated remote areas can be reached cost effectively with two shortwave transmission sites. Shortwave is an ideal media for delivering radio programming to remote regions during morning, daytime and evening hours. The proposal before you is for a transmitter site in British Columbia that could serve western and northern Canada and a transmitter site in Newfoundland that can reach Labrador, Northern Quebec and regions in the high arctic that are poorly reached by the BC transmitter site.

Technical Notes

It is assumed that the shortwave transmitters would be fully Digital Radio Mondiale (DRM) compatible. DRM allows for FM radio quality digital audio over very long distances using shortwave.
This proposal is for a 2 frequency nationwide network using the 49 meter & 41 meter bands. In total 4 frequencies may be required to provide daytime and nighttime transmission with 95% availability. This proposal requires using 2 variable frequency automated 50 kw DRM SW transmitters.

The 2 DRM transmitters would be expected to run around 16 hours a day, out of a shortened 112 hour week transmission schedule. In cases of national emergency, the network could run 168 hours a week with 5 different voice only audio streams.
I do not expect a new frequency allocation for this shortwave service, as the CBC-SRC is already using three shortwave frequencies

(http://www.cbc.ca/frequency/shortwave.html). CBC-SRC needs to make a uniform allocation of 40 khz for domestic shortwave broadcasting within the 49 m and 41 m bands. This allocation would be made for use by all domestic shortwave broadcasters.

These area coverage computations do not represent full optimization. The frequency and antenna types may need to be slightly altered so as to achieve the goal of covering 98% of Canada's land mass with a reliable shortwave service from two transmitter sites.

This is "assumed"? Why? Is the objective to squander as much bandwidth
as humanly possible? While we're at it, maybe we should burn their
forests and poison their water.

> The President can't overrule the court.

OK, I didn't know that. But, he can address the nation, Congress and the
Senate about it and show his disapproval.

This way he can force this ruling to be oveturned but we don't hear a peep
from the cowboy.

And, I don't believe the supreme court makes any major decisions that the
"boss" wouldn't like.

BTW, I'm more conservative then liberal.
I'm more in the middle. In some older traditional laws and ways I'm in favor
of.
But I'm NOT in favor of the SELLING OUT of this country to illegal
foreigners and destoying the middle class whose backs BUILT this country up.

Now, we get rewarded by letting these low class, uncultured, law breaking
non citizens to take over our country. In their culture they multiply like
crazy. They have no problem having 3 and 4 children whether they can afford
them or not.

I on the other hand took great consideration into planing and seeing if my ex wife and I could afford to bring ONE child into this world. But what do they care? They know us moral Americans will make sure they have food, housing and free medical care. In fact, they purposely have "anchore babies" just to stay in this country. How low life is that?

To bring a baby into this world not out of love but to use us and make money. What low, low animals. I have ZERO repect for these people.

I pay almost $700 a month for medical. I'm subsidizing these illegal animals. But I won't do it for much longer. Plus, these people don't integrate and become true Americans. They live here for instance in Miami for YEARS, yet they still can't speak English and don't care to. You see WE must learn spanish to communicate with them. Not here. Not with me. If they can't speak English then I won't go out of my way to talk with them.

They took a part of Miami and turned it into "Little Havana" or "Little Cuba" It's like they lifted a 10 square mile of Cuba and set it down in America. I truly believe their alligence is to their motherland instead of America.

And you think these illegal mexicans are behind our country? They hate our guts. They only reason they are here is to use us all they can and get FREE, FREE, FREE everything while they take jobs from us then send billions BACK to mexico depleting this country's economy.

And bush isn't finished yet. He wants to make ALL these illegal criminals into "instant Americans" and this will entice millions more to come here. I mean why not? We have walls and fences that the federal gov't will not fix or supply the funds to fix them up.

But, bush's blind white trash followers don't even know what's going on in this country nor do they care. Just utter the word "Jesus" and you're in like flint. This country is headed into becoming a 3rd class, uncultured, low paying banana republic RIGHT BEFORE YOUR EYES.

Bow to your leader and his administration you clueless fools....

Hi

Eminent domain has been around for years I know that. But now, {read}
PRIVATE parties can say the structure is "blighted" and old and if they
remove your house, they can build a private structure{s} like a MALL or
hotel to bring more taxes in for the city.

That is a BIG difference in taking land away from a private citizen for
another private party. I can see taking land away from a private party for a
hospital or something similar to serve the wider public. But NOT for a mall
or private entity. What part of this do you not understand??? What part of
taking away the house that a 80 year old lady in Cleveland has lived in all
her life for a mall against her will? Yes I'm all "wet" over this issue.
Nothing you say will change that. I'm glad you're happy with this.

I hope you're right Greg but that's still not the point. The point is that this ruling was approved and passed and I don't see the media or our political leaders making an issue of it. This should have been taken care of already. Instead, we have assholes like Rick Santorm mouthing off about things that makes no sense at all.

I don't care whether you label the judges whatever you wish. The fact is this ruling was passed and it's up to our political leaders to overturn it. Isn't it funny how we have lost many of our civil rights under this administration and the country is allowed to flooded with illegals. You can say whatever you wish to defend the draft dodging hick from texas that sends young men and women to get killed or the arms and legs blown off for oil. There is NOTHING you can say to change the facts.

I just wish to say this. I'm not a racist. These illegals just happen to be
Latin. But it doesn't matter to me what nationality they are. It's the fact
they are illegals who hate us and come here and use us and in many caes kill
us. Those they want open borders use the racist agenda to fight us. I don't
give a crap. I'll fight them all the way.

Lucky, it's been all over the media and on all the commentary shows from one end of the political spectrum to the other. And governors and state legislators are working to see how they can add more property rights protection in their states. There just may be some good works coming from this.

Thanks to Mr. John Smith for the following link -
http://hraunfoss.fcc.gov/edocs _public/attachmatch/FCC-05-143 A1.doc

Mr. Time Lord -
Your dream is coming true - the FCC is about to dump the code
requirement.

You better go to Huntsville Hamfest and get a nice HF rig and a huge
amp so you can check in to The Great Liberty Net.

Sir Sidney and Kind Jewish Indian will be there to welcome you.

Nashville Joe might even drop by and say hello, too.

The strict construction argument is "Public use" should not be
interpreted to include "economic development" or increasing tax revenue.

A hydroelectric dam goes beyond economic development - electricity is a
resource - Do you know anyone who doesn't benefit from having
electricity available?

A mall, office building and high density housing can change the
character of the community. Reasonable people can reasonably disagree
if this is an improvement.

In this particular case, they intend to add 80 housing units. This
could create a host of additional expenses for the taxpayers of the
community because of increased traffic on roads, demand on water and
sewer systems, and educational expenses.

> Four, people seem to believe that eminent domain didn't exist until this
> recent decision. It's been around since the beginning of this country.

>
Who said that?

The expansion of the definition of "public use" is significant.

In CT, non profit organizations are exempt from paying property taxes.
Any property they own could be at risk.

> Five, "conservatives" are traditionally "strict constructionists" in

> so-called "conservatives" better figure out exactly what it is that you
> stand for. You're pretty confused right now.
>

Your logic here depends on the assumption "economic development" or
"increasing the tax base" has always been "Public Use".

Another way of looking at it is the court expanded the power of the
government.

Think about it - if what you say were true, it would mean on this one
case, four consistently liberal judges voted as conservatives and three
staunch conservatives decided to vote as liberals.

> Six, eminent domain is a legislative creation. Your local or state
> government creates it and controls it by statute. It's not
> unconstitutional, the Supreme Court can't overrule it. You don't like
> it, quit bitching about the Supreme Court and go to your legislators and

>

Contacting your elected officials to find out if this decision could
affect your community and to push for a change if it's needed is a good
idea. So is voting for different people if you don't like what they're

doing.

> Seven, none of you could possibly have passed your high school civics
> classes. Some of the loudest of you loudmouths in here claim to be the

Nope, I'm saying the right wing media, once they found their voice and
reached their audience, mostly on the am BCB, ran amok and ratcheted up the
hateful commentary to an unprecedented (in my lifetime) degree. The only
liberal equivalent to Rush/Hannity/Savage/Ingraham/et al is Air America, and
those folks are basically irrelevant. Lionel, a lonely liberal voice on am,
is pretty reasonable and well-behaved compared to those neocon spokespeople.

> Nothing you say will change that. I'm glad you're happy with this.

Okay, Lucky, you tell me -- you refer to the Fifth Amendment, and you tell me what the Supreme Court should have ruled in this case. Describe where in the Fifth Amendment it says that taking private land for economic development is prohibited. And, while you're at it, tell me why this situation is the Supreme Court's fault, as opposed to the local government entity that created the law and actually did the taking.

The floor's all yours.

>
> I did pretty well in Civics.

Mark my friend,

the one MAJOR POINT that everyone is missing, is this.

It doesn't matter if the community would gain an extra million a year in
increased taxes.

It's the idea that money OVER RULES your private right as home owning
citizen.

Your right should be paramount above all else as a private homeowner. The
gov't should have NOTHING to say about what you do with the land you bought
except tax collection and THAT'S IT.

People have fought and DIED and fought and DIED to protect this right. How,
how in the name of monetary paper does a persons rights get plundered and
thrashed? I don't care what level of gov't is doing it. Whether it's local
or not makes no difference.

This expansion of eminent domain law is the worst blow to a American's
citizen rights.

Everyone is missing the whole point. You're just making excuses of what is
really happening and what will happen in this "free" country.

Guess what? It might happen to you, someone you know or your children and
grandchildren in the future. Do you want to leave your kids this law?

Lucky

Hi

I don't have to look at any Amendment.
It's not whether it's not prohibited, it's that they chose to pass this
"expansion" of Public Domain to PRIVATE DOMAIN.

Don't be wise guy and tell me that it's not prohibited therefore it's OK.
How about slavery? Why not go back to it? That would be a big economic
developement for everyone except the slaves of course.
Why not use it?

And it's the Supreme Court's fault for approving the local law. If they
struct it down, being the SUPREME LAW OF THE LAND, the "your land is my land
now" law wouldn't given such high legitamacy.

The floor is all yours...

Yes Greg I saw it all over the media for a couple days then it stopped. I hope you are right and it gets overruled and we have more protection. But we shouldn't need any. We should not have to fight our own gov't to keep our land. Just the opposite. They are supposed to protect us from such siezures but now they do it themselves.

Very nice huh? Welcome to America now. If we don't do things as a MASS to change things and take back our country and all rights that went with it, we are doomed and so is our culture.

All this needs to start with having the police and military on the right side of the real laws since the enforce these laws. Like I said, watch for the day an honest American get handcuffs put on him for not giving up his home to a private developer with mega dollar attorneys.

IF that ever happens it might be time to move on....

There are instances where eminent domain is justified. The
hydroelectric dam was a good example. In earlier days it was used for
building railroad tracks to allow expansion westward.

In one of my communities it's been used to prevent over development -
but only for property that's on the market, and they'll match what a
developer is offering before going to court.

> People have fought and DIED and fought and DIED to protect this right. How,

As Brian has mentioned, the logical thing to do is make sure you know what the laws are for your community, and change them if there's a problem.

And change your elected officials if they're part of the problem.

Many folks only vote in Presidential elections, because they feel those are the most important ones. The reality is what your local government does is usually going to have a greater impact on your life.

You proved my point by bringing-up Cook County in 1960.

Reich Wingerscontinue to use that incident to justify their assault on
the most sacred of all American rituals and will probably do so
forever, unless they are forcibly stopped.

Hard to admit you've been hoodwinked, but for the sake of the country
please take the blinders off. Thanks.

Exactly. Do you know that well known gang members that were deported have been re-entered up to 5 and 6 times and were deported each time again?

Judges know they are illegal but set court dates knowing they will never show up and waste the courts time and our tax money.

The FBI now has to fight these well organized gangs like MS13 that murder and it's said they smuggled Al-Qaida members in this country already?

Why were they allowed to enter this country freely in large numbers?

How about diseases they bring in? There is a rare form of tuberculosis in our country now that is drug resistant. We know have 7000 cases of leprosy. Yes leprosy that was wiped out of this country long ago. These same people work in our restaurants handling our food. Nice huh?

Enjoy your meal...

Lucky

Mark, I'm not saying that there are not times when it's justified, but NOT
for a private party to build a mall. Show me a hospital or something that
will greatly improve the area for the ENTIRE PUBLIC ONLY and even then, pay
that person double of what the property is worth for compensation. That
should be a law. Double the market value to ensure just compensation so that
said person is not limited to where he now has to move.

You should also check with your representatives in the State
Legislature, and your local city government.

You have more influence on elected officials who are closer to home.

Yes, perhaps. But the CW requirement probably keeps a lot of people out of
ham radio.

Hey,I am not joking.JT and Dave on their radio talk show
www.supertalkms.com just now said something about setting the clocks
back one hour in March instead of April and some Canadians are worried
about that because they fear the extra Sunlight might damage their
crops.

The written test probably does as well. Should that also be dropped.

If one can't learn even a minimum 5 WPM then they have no business in amateur radio. 5 WPM is incredibly easy, heck, even the 'tards should be able to master that.

MnMikew:

Interesting theory. We could propose a test to see if what you say is true.

Say, require a person to do 5 WPM before they can use usenet, IRC or IM clients? ROFLOL!

Perhaps we would find it is actually a "good thing." Next we could require a person be able to rollerskate 5 miles over rough pavement before we allow them a drivers license? I mean, what if traffic is too heavy or their car breaks down--it will be useful! <grin>

I say give techs a piece of HF and if they like HF, they can take the test
to get access to the rest of it. I'm half-heartedly studying for the tech
test and only really have interest in 2m right now.

I couldn't agree more with dropping CW from the ham test.
It reminds me of the legal profession here in South Africa.
It used to be a requirement that lawyers had to pass Latin in high school
and have at least two courses in Latin for their law degree.
That was scrapped about ten years ago amid loud protests from the dinosaurs.
Today the law profession is flourishing more than ever before with high
quality judges and advocates.
The only thing I have noticed is that the high and mighty no longer spew out
Latin quotations = R.I.P.

Our SARL (South African Radio League) ham club is diminishing by the year
and the once crowded ham bands are now empty.
We need to make it easier for new entrants to come into this wonderful
hobby.

Well, yes there are trends. Some people have actually taken the time
to review the data before making a judgement on the health of the
hobby. The news is not good. Take a look at:
http://users.crosspaths.net/~wallio/LICENSE.html

I do agree that removing the morse code requirement will probably have
little impact on long term registration. It is probably too little too
late to reverse the trend of the hobby moving from grey to white hair
as the age of active participants continues to increase. The hobby is
almost a quaint anachronism to younger people who are aware of it.
There are so many viable alternatives that do not require tests and
licenses.

Yes, or require that prospective drivers be proficient in the use of a
buggy whip in addition to passing a written and practical driving test.

Yeah. The logic escaped a lot of people the first time. We keep
hoping that in the repeating some common sense will sink into the
conceptually challenged minds out there. Hasn't happened yet...

That might have been true in Samuel F.B.Morse's time. Get real, code
is an archaic leftover from the "old days" and has been used merely as
a "stumbling block" to keep the hobby a closed society. In fact,
radio itself seems to be going the way of the dodo bird, what with
satellite, internet, etc. Code is about as useful as C.W. McCall'
song about CB radio back in the 70's. I am not sitting at a key,
wearing gaiters on my sleeves, a green visor and tapping out code over
the air while the ship hits an iceberg. Come into the 21st century
for Christ's sake. Should everybody go back to spark controls on an
automobile? Attic fans and no A/C? McGuffey's Reader? Face it,
people, technology and now rules, have to move on. Of course, I drive
a 1940 Chrysler, so what do I know!

> said person is not limited to where he now has to move.

Now you're starting to get to the real issue. You say that a private party building a mall is not a public purpose. That's fine. Then, you say that a hospital is a public purpose, and suggest that projects that will "greatly improve" the area for the entire public only are a public purpose. Now you're getting into the gray area. Most hospitals are privately owned. Are you saying that you'd approve of the forcible taking of private property for the construction of a private hospital? Sure sounds like it. You know what? That's not a legal application of eminent domain, you couldn't do it. How about your definition of "improve the area for the entire public?" What does that include? What if other citizens disagree with you? Can it ever be a private development? What if a privately-developed amusement park, open to the public, would "improve the area for the entire public," because presently there's a hog-slaughtering plant on the land? Would that be okay? What if the owner of the property disagrees with your definition of "improve the area for the entire public"? Here's the ultimate question: Do you want the Supreme Court of the United States to decide the definition of "improve the area for the entire public," or do you want to have some input into it? In the recent case, the Supreme Court said it would not enter into that gray area, it would leave the decision up to the local government -- and that's exactly the way it should be. What if you disagreed with the Supreme Court's definition -- you'd have no recourse at all. Under this recent decision, if you disagree with the local government's definition, at least you can do something about it. Why on earth would you want the Supreme Court to be making decisions for your local government?

> I'm going to call my local Congressman to find out what his stance is on
> this.

Don't bother, eminent domain is not a federal matter, it's controlled by state law. Call your state representative and your local government offices.

McGuffey's Reader is still in publication, and folks who do home
schooling claim they're better than recent textbooks for teaching the
basics.

But I'll agree with you on the code.

And that's the point. The written and practical drivers test is a measure of whether a prospective driver knows something about the law and theory of driving and has some proficiency in the operation of a motor vehicle.

The written amateur test proves that the owner has some knowlege of the theory of radio construction and operation.

The morse code test only tests the ability to translate a language for which there is no practical use. It does not shed any light on the ability if the prospective ham to operate a ham radio in a safe and courteous manner. A live on-the-air test of a prospective ham setting up a rig and using voice or one of the digital modes would prove something about his competence as a radio operator.

Copying morse code proves nothing.

From the posts which follow this one of yours, it is plain these fellows last interest is in really getting a lot of people on the bands to communicate with. Indeed, for some strange reason the think themselves "special", just like those latin chanting lawyers you pointed out.

In all truth, these guys should have their radios taken away, all they are coming up with is ways to hamper the hobby!

Could you please explain why you say that.

To state the obvious, CW is just one of *many* modes available to hams;
moon bounce, meteor scatter, lots of digital modes (PSK, MFSK, RTTY,
Hellschrieber and probably a few I missed), slow scan TV, fast scan TV,
APRS and on and on.

CW-just another mode. Why test for it and not test for, say, moon
bounce? You probably missed it, but a while ago the FCC said CW was
required in the old days when CW was primarily used for marine
safety-they didn't want hams to be transmitting over distress calls.
That was it. Period. As you are well aware, CW for maritime applications
is virtually dead.

Before you think I am a whining, sniveling "no coder", I am a 20 wpm
Extra who operates 20% digi modes and 80% CW, fairly comfortable at
25-30 wpm.

And puh-leze, don't even think about trotting out the old saw that "I
had to learn the code so the new guys should too". That's akin to saying
everyone should hand crank the engine on their car rather than using
those new fangled $#@*^! electric starters.

Morse code is not used in communications of any consequence in the
western world. Try communicating in morse code to FEMA, the Hurricane
Hunters, local police, fire or medical workers and see how far you get.
Nobody will be listening.

> The strict construction argument is "Public use" should not be
> interpreted to include "economic development" or increasing tax revenue.

I disagree, Mark. The Fifth Amendment only says that fair compensation must be paid when private property is taken for a public use. Strict construction would conclude that the Constitution is silent on the issue, therefore, the legislative branch is not prohibited from defining "public use."

> A hydroelectric dam goes beyond economic development - electricity is a
> resource - Do you know anyone who doesn't benefit from having
> electricity available?

The only reason electricity is generated and sold is for commercial, economic purposes. The construction of a big hydro project is for nothing but economic purposes, and many, if not most, are built by privately-owned utilities.

> A mall, office building and high density housing can change the
> character of the community. Reasonable people can reasonably disagree
> if this is an improvement.

And that's the point of the Supreme Court's recent decision. They were asked to declare that "economic development" can NEVER be "public use." They refused to do that, and left it open for reasonable people to draw their own conclusion -- in the legislative bodies of government. The real bad guys here are the legislators in Connecticut who are allowing the eminent domain law to be used this way. They could change it any way they want. But, for some reason, everyone wants to tar and feather the Supreme Court for upholding local decision-making.

> In this particular case, they intend to add 80 housing units. This
> could create a host of additional expenses for the taxpayers of the
> community because of increased traffic on roads, demand on water and
> sewer systems, and educational expenses.

I'll concede that all of this is true. But, it's not the Supreme Court's role to make case-by-case determinations of what they think is right and what they think is wrong. Again, I have to ask, why on earth would you want the Supreme Court to get involved in local policy decisions?

>> Four, people seem to believe that eminent domain didn't exist until
>> this recent decision. It's been around since the beginning of this
>> country.
>>
> Who said that?

Not necessarily here in this thread, but I hear people talking about
this case as if it created some new law. It didn't.

> The expansion of the definition of "public use" is significant.

Explain how the Supreme Court expanded the definition of public use.

> Your logic here depends on the assumption "economic development" or
> "increasing the tax base" has always been "Public Use".

I don't think I get your point. The Supreme Court did NOT say that
economic development is ALWAYS a constitutional public use. They
refused to do the opposite, and say that it is NEVER a public use.

> Another way of looking at it is the court expanded the power of the
> government.

No, again, they just refused to limit it, that's all.

> Think about it - if what you say were true, it would mean on this one
> case, four consistently liberal judges voted as conservatives and three
> staunch conservatives decided to vote as liberals.

Everybody is harping on this point -- what's the significance?

> Contacting your elected officials to find out if this decision could
> affect your community and to push for a change if it's needed is a good
> idea. So is voting for different people if you don't like what they're
> doing.

There is a lot of abuse of the power of eminent domain, and most of the
abuse takes place at the lowest levels of government. Here in my city,
the city council recently declared a large part of the downtown area
"blighted," as a preliminary step to condemning it by eminent domain and
then turning it over to private developers. Problem is, it's not
"blighted," and it's a transparent ploy to benefit a couple of
well-connected local developers. The solution to this kind of abuse is
not to get the Supreme Court to issue blanket rules that will tie the
hands of legitimate uses of the power of eminent domain, it's to go to
city hall and raise hell, and not let the bastards get away with stuff
like that. The problem is, that requires an intelligent citizenry that
stays in touch with what the government is doing and is willing to
participate in the process. That's a lot to expect of people,
especially when it's much easier for them just to listen to talk radio
and bitch about things.

That's a truth not limited to ham radio...pilots have known that VOR stations identify in Morse coded since the beginning of VOR. As did/do ADF stations before them. Charts are marked with frequency, station indentifier, and the Morse equivalent. Knowing the code saves a lot of time and helps reduce confusion when navigating by radio.

Frankly, I don't give a rats behind about CW ability. Unless someone
is interesting to chat with, they can go take a leap.

CW masks the voice, speech inflections, emotion in the speech, etc,
etc...

CW is for anti-social ma'roons, phone is for the educated to have a
real exchange of ideas over...

Video is good too, but only if it is a lady ham and she is wearing a
thong! <grin>

John S.:

You will learn, logic will get you no where here, these guys simply have a "religious bent" for CW, if feeds their ego in some weird way I cannot fathom and makes 'em feel "special."

Give up, the sum of their combined ignorance is much larger than the pool of logic which available...

But surfing through the bands and finding cw only proves one thing:
That there is a small band of hams that still enjoy an early form of
semi-digital communications. None of the people that do the searching,
rescuing, faghting wars, etc., use morse code. It was THE way to
communicate under difficult conditions, but no more.

So I guess you are saying that you don't have to be smart for moon
bounce or meteor scatter...well, I can't argue with "logic" like that.

> Get the point dumbshit?

Well, at least you're consistent--the usual dx "ace" vulgar, name
calling response rather than intelligently debating the issues...just
like m II pointed out in his right on the mark "Journalism" post--> Ace:
Yeah, but they're ninety percent 'tards, like you are you moronic
screwed up CanaDUHian idiot...

Well, I guess I should be thankful that you didn't call me (gasp, horror
of horrors), a ...Canadian.

You seem like a very angry, bitter and vulgar person, unable to carry on
an intelligent debate and actually address the issues.

Get help.

73,
Carter K8VT

Sure, but whether I or anyone else knows it is pretty much irrelevant
since there are very few practical uses for it any more. I'm not sure
what you meant by: Still is and always will be. If you are saying
there are rescue, search, military or other professional groups in the
western world that use cw actively I would like to have a list.

Funny you should mention the POW camp and taps...

I was just in that situation last week, quite strange the vast numbers
which end up under such circumstances--yep, just lucky for me I do
know CW or I wouldn't be hear to tell about it...

ROFLOL!!!!!!!!!!!!!!!!!

China's new destroyers feature Aegis tech copied from U.S.

Special to World Tribune.com

EAST-ASIA-INTEL.COM

Thursday, July 21, 2005

China's military put its new guided missile destroyers on display last week, disclosing its two new warships that are equipped with Aegis-type battle management systems.

The two Luyang II guided missile destroyers are Beijing's first Aegis-type ships. The ships are currently undergoing sea trials.

U.S. intelligence officials say China stole the technology for the Aegis battle management system by setting up a front company in the United States that became a subcontractor for the Aegis system manufacturer.

Both types of destroyers are equipped with Russian military equipment and weapons, including missiles, as well as indigenous Chinese anti-ship missiles.

The four warships are part of China's military buildup that U.S. officials say is designed for more than just a Taiwan conflict. The Chinese are building a deep-water navy able to project power, especially against the United States.

But what possible connection is there between licensing a ham for communications on 40 meters and the ability of a pilot to interpret station designators. Unless the FCC and FAA are merging and they will be offering one combined license for the amateur Hamilot

Everthing else snipped.

Well,I am shocked and just totally taken by surprise with the news that one nation would stoop so low as to engage in spying and dare to copy another technology. I do believe that is a first, don't you think?

If folks can't learn how to spell properly,they should not have access to the internet.What does that have to do with CW? I don't know,but I think it makes some kind of a point,whatever.Computers are Radios and computers conversing with other computers are Transceiver Radios.Typing this right now,I am wirelessly (my wireless keyboard) transmitting via a glorified Transceiver Radio.OK,let the arguments begin.

Eleminating the CW test won't bring in any significant numbers of new
minds into ham radio. Ham radio just isn't interesting to the current
generation code test or no code test. All your yapping is for naught.

> I've seen that before.. cracked coils and trimmers are the signs
> of a twirler,someone with tools but little skills with regard to
> rf alignment. was the trimmer accessable before dismantling?

The trimmer is only accessable once you remove the chassis from the cabinet. It wasn't a matter of somebody destroying it..it didn't need any help. It just fell apart over the years. I did replace the trimmer, and the alignment notes stated that an external frequency counter could be used if the radio's digital display was defective. Of course, the internal display wasn't defective, but Sony's alignment notes are utterly useless. They tell you to disable the high frequency PLL.....once you do this, the system goes out of lock and the internal display shows what appears to be the preset frequency.
Ok.............I decided to use an external frequency counter. The only problem here is that the useless service manual doesn't show where to hook up the counter.
The radio went back to its owner, and a Grundig 3400 was traded to me instead. I am working on the Grundig unit now. I just got through cleaning the I.F. bandwidth switch and adjusting the indexing mechanism for the SW bands.
One thing I can say after comparing the innards to my Grundig TR-6001.....the mechanical construction of the indexing mechanism on the TR-6001 is much better than the 3400. Instead of using these leaves sticking out from each of the band range modules the way it is done on the 3400, the 6001 has either gold plated or brass rivets that make contact with the leaf springs instead.
A much more reliable radio.......I think that the 6000 series was the best of their whole model line, although the 3400 was still made in Germany, it still used ERO polypropolene audio capacitors, and it still used a Variometer that was mechanically coupled to the main 2-gang tuning capacitor to add that extra 3rd gand, so it wasn't completely without its good points. Once I finish it up, I will play with it for awhile, and then trade it off.

Pete

THATS MY POINT! Sure it might get crowded, I doubt it but it could happen. Seems the more the merrier? So people get bored on 2 and 6m and eventually drop out of ham radio. Perhaps if their interest was peaked with some HF they'd get motivated to get the code. Or if they dont like HF, no biggie.

Guess I could always get an amp and a modded Galaxy. :-)

Unless the FCC operates very differently from other federal agencies the fact that they are using a Notice of Public Rulemaking signifies that they have pretty much made up their collective mind to go ahead with abolishing the morse requirement.

I wonder if all of those against change have expended as much energy writing to the FCC as they have repeating the same worn old arguments here on the news group.

The only worn out arguments are those expressed by those who want the code test dropped. The majority of whom it would seem are to stupid or lazy or both to take the time to actually learn something.

MnMikew:

When I got my first amateur license (1969) I had an old karr cb radio driving a 100 watt amp which drove a final amp of 1200 watts. From there did couriers, johnsons, cobras, unidens, browning eagles, trams, etc on CB...

Now I run an old russian 5KW linear. Thing is a battleship (100% keydown time at 3.5KW in), and 1 to 75MHz bandcoverage. At 1KW with reduced input voltage and drive it purrs, same russian tubes have been running in it for over two decades and constant usage, tubes still check out great. I have a newer 3.5KW unit but the old 5KW is my favorite.

There is a lot to like about old equipment. I have ran newer amps but none finer than this old timer... australia is only a quick CQ away, anyday the band conditions are barely alive...

CB has always been one hell of a lot more fun than amateur radio. I will always be a CB'er at heart, and an amateur second...

Tell me, what is/are a legitimate argument(s) to keep CW a
requirement, which any sane man/woman could argue with real and
logical conviction?

If such existed, I am sure it could be pressed into service and quite
well stop the removal of the CW requirement.

However, I think any argument posed would have "them", in the end,
considering the person posing the argument booked for a three day stay
in an institution and giving them a mental observation!

Anyone who still poses an "important argument" here and fails to make
others aware of the terrible travesty which is about to be committed
by the dis-continuance of the code requirement is a "TRUE FOOL!!!" and
should hardly be surprised when laughed at here...

The ARS written test has been a joke for years. All the answers are published, all one has to do is buy the book and memorize the answers.. no need to actually KNOW anything. How many of these damn 'appliance operators' nowadays can actually build their own equipment? How many can repair the appliances they buy from HRO or Universal Radio (beyond looking on the internet for mods)?

Carter,I happen to own a 1914 Ford Model T Runabout Roadster car.I have to push the starting handle in and keep my right hand thumb (I am right handed) and my knees out of the way when I start up that old car.But,once I get it warmed up a little bit,all I have to do is shut off the ignition and let the engine stop running and then switch the ignition back on and if one of the four cylinders is on or near top dead center,all I have to do is kick a tire and that old Ford T Model engine will start right up.(it works every time) What if your modern day vehicle has a burned out starter motor? How are you going to get it started up if it isn't a straight shift and you can't push it down a hill in second gear?

> John

No. My point is that nobody needs to know ANYTHING to get an amateur radio license, because all the questions in the FCC question pool are published for anyone that wants to look for them. I don't know about where you grew up, but when and where I grew up, this was commonly referred to as cheating, and used to result in a failing grade. The fact is, most current 'appliance operators' don't know anything about the equipment, modes, propogation, or operational/electronics theory behind the equipment they are using. And the aforementioned knowledge is part of the point behind amateur radio. Hams are not inventing anything new.. manufacturers are.

A few years ago,old man Charles McKitchuen had a Russian ship radio and an English radio for sale.Both shortwave radios.$50.00 for the russky radio and $35.00 for the limeyland radio,he was asking.I kick myself everyday for not buying those old radios.I am going to phone that old coot in a couple of hours and see if he has come up with something I need to buy.Radios,computer stuff,stuff like that.

Brenda:

Do you actually think a ham, in his garage, is going to invent a new type of device, in his garage, which is going to function like a tube or transistor--now that might be possible--just not very likely.

They (new hams) need to know the band allocations, they need to know about modern methods of data transmission, data compaction/encryption--to make real advancements. They need to be very computer savvy!

Mostly, they need to know how to operate a radio, take a look at the new ones, with smc components and such, no one is going to be building much equipment anymore, maybe linears and antennas, but that is about it.

Even if a ham knows how to build a crystal radio, a trf receiver, a regen receiver or a QRP transmitter--he darn sure is NOT going to use it.

The new ham gear will be your computer with a pci receiver board and xmitter board stuck into it--maybe an external power amp...

Times have changed, the tests are simply changing to reflect those changes... of course the old timers are having a problem adapting--read about peoples views and feelings when the automobile replaced the horse and buggy--took decades and if you read the articles of the time, was hauntingly familiar!!!

> offices.

Ok number one,

I'm not in favor in any forcible taking of someone's home be it for the public or not. I only gave the example of a hospital actually as a symbol of "what's good for mankind and serves everyone" That's something I might be able to put up with.
Something that could make some sense to some poor soul.

No one has any right, to take your property away from you without your approved consent. Now I don't approve of my "say it in" in ANY form. You see, without that law, if a private party wants the land, a deal might legally be worked out. So, even without this law, land could still be bought for public use. Except the decision would be all mine. I decide when I want to sell, to whom and for how much.

Don't tell me you're taking my land from me to build ANYTHING. I don't care if it comes from the local gov't or from a ruling. You are taking MY rights away as a land owner.

Now if a giant highway needs to be built for instance, then in that case I can see it's no use. This is major progress. So, the person should be paid double or triple what it's worth and any other compensation the person offers up as a real concern.

In other words I want NO recourse on this law. I don't want it at all. If I want to build a mall and one person doesn't want to sell, then back your bank accounts up and find another spot for that mall. Period.

Lucky

Means that the loopstick in your radio is already higher Q and more closely
tuned than the RS loop. It's not a problem, it's a good thing.

That's just their current excuse for dropping the code. The tired old line about the buggy whips just wasn't cutting it any more.

Bottom line, the majority are simply either too stupid or too lazy to take the time to learn it.

COBOL viable?

Hmmm, you mean in the sense that Egyptian mummies are still "viable?"

Well damn, they did make damn durable mummies back then, didn't
they??? <grin>

And, COBOL continues to go away slowly... but little new is actually
created in it, but uncounted lines of COBOL code is still
maintained--like the mummies...

The constitution applies to U.S. citizens. Unless you feel the U.S.
constitution should be applied globally????????

With the exception of Jose Padilla, none I know of are U.S. citizens. Enemy
combatants (even if they are U.S. citizen traitors) fall under different
rules than uniformed soldiers that are captured and fall under the Geneva
Convention category of prisoners of war.

Well they should have ruled NEVER EVER can public land be used for economic
developement period.

Why? Cause the land can still be bought off private hands for public use. If
they said Never, that protects the citizen from having his home marked as
"blighted" and taken away.

If someone truly lives in a blighted home and area, they would be more then
happy to sell to developers. Then everything works the way it was supposed
to. You want to buy my land, OK I will sell it to you.

You want to buy my land, No, I don't want to sell it to you. That's it.
Finito. Get the picture?

So yes, I blame the 9 shitheads of the court that didn't rule never.

Have I made myself clear??

Lucky

But, the Supreme Court did rule in the developers favor cause they left this
law OPEN to abuse. This ruling only benerfits the private developer. Tell me
how it benefits the private home owner?
> They refused to do that, and left it open for reasonable people to draw

We generaly don't have as much worry about lightning along the
coast of Calfornia. But we do have the local power utility.

Some years back, a worker dropped a multi-KV line across the
local 110V line. It took out almost all electronics on at least one
block, as well as burning out the motors on some refrigerators and
blowing a lot of light bulbs which were not even turned on at the
time.

Bullshit. It's right there in black and white, and I'm not talking about
weapons. There were other violations of the terms of surrender; he violated
them on numerous occasions, and you're trying to change the subject.

It's really simple:

1) Did the terms of surrender that Saddam agreed to dictate that he make no
hostile or provocative action?

Yes, or no?

2) Did the Iraqi military on numerous occasions knowingly target American
aircraft with radar used to control AA or ground to air missiles?

Yes, or no?

The answer to both questions is yes. Your assertion that he complied with
all demands (IOW terms of surrender) is therefore shown to be crap unless
you can somehow show that the answer to either question is no.

And of course, my original assertion that Iraq wasn't a sovereign nation
still stands.

> We lied because we wanted the spoils of war. We are pirates.
> Barbarians.

That's not what we're discussing. We're talking about whether or not he complied. Stay on track.

> Code proficient.

Answer the question, stupid. What is the specific reason for learning an obsolete mode of communication? So what if code is better, so were Beta videotapes, and how long has it been since you've seen one of those? Face the facts: morse code is obsolete, it has been for a long time, and the only ones who demand that the newbies learn it are 60 year old hams who had to learn 20wpm for their ham test in 1962. Code still has a few applications, yes-specifically airplane waypoint beacons, which broadcast in code. But those aren't actually copied by the pilots, instead a light goes on in the cockpit when the plane passes over a beacon, so the pilot knows he's on course. But for ham applications, and marine distress signals, and most everything else, it's obsolete. It's a requirement that was useful in 1920, but it's outlived its usefulness.

I figure that the A+ Certified computer technicians at my vocational school (whose ranks I hope to join by early next year) know more about electronics theory and construction than the average appliance operator ham. It seems to me that a lot of hams are old farts who were educated on tube equipment-all this modern stuff, including microprocessors, might as well be Chinese to them. I like the idea somebody had of an over the air test, graded by a panel of judges situated around the country. Of course, with today's appliance equipment one just has to plug it in and hook it up. I'd like to see some stuff on electrical engineering (basic theory and application) and maybe a hands on portion where the prospective ham builds and operates a simple rig. That would eliminate the "appliance operator syndrome". Of course, all this would require a lot more commitment on the part of the FCC than just a written test where the published answers can be memorized, but the FCC has shown that they don't give a flying fuck about amateur radio. Like the rest of government, they're in business to give maximum profit to a favored few (the NAB, in this case) and extract maximum taxes (fines) out of the rest of us. All the FCC cares about is AM/FM broadcast radio (thus the hefty fines handed out to FM pirates while SW pirates operate with impunity for years) and TV. The FCC doesn't control cable or satellites, which have been and are taking market share away from on air operators, so the FCC is focusing on what it has control over. But SW? Forget it. WWCR operates in the tropical bands, WWRB operates out of band, and the FCC does nothing (and did I mention the pirates?). There's no profit in SW, no NAB for SW, so the FCC ignores it.

I think public school systems are failing miserably at teaching
anything of substance in the area of history and government. To say
the Supreme Court wont make decisions contrary to the Presidents likes
or dislikes is a classic example of an extreme lack of any real
knowledge in this area. "Clue" the President has zero authority over
the Supreme court. The President is in the "Executive" branch of
government and the Supreme Court is in the "Judicial" branch of
government. There is no overlapping. When you are a member of
the Supreme Court you have "absolute" autonomy over "your"
decisions. They cannot be over ruled by anyone. Thus endith
Government 101.

rd:

I don't know about the A+ test, in fact, I wasn't even aware that was still around--last time I seen it was when it still seemed focused on DOS...

However, any student in math, sciences, engineering, etc would have no problem studying, digesting the information and regurgitating it on a test--with excellent results... just fact...

dx-boob:

Actually, I have a severe distaste for "roger beep." (indeed, I should think I would dislike his whole family! <grin>)

However, my computers sound card, patched to a mic in is able to say cutsie little mp3's, such as:
"Houston, I think we have a problem" and, "Maybe the dingo ate yer baby!", etc...

I don't really do echo either, however the dsp software on the sound card (written by myself, in C++) is able to provide a plethora of strange/unusual and not-often-heard effects, it is one-of-a-kind, I assure you... <grin>

Never say never. Have you forgotten, or maybe you didn't hear, about the Republican legislators and the President discussing passing legislation to allow Congress to overrule Supreme Court decisions? This would be totally unconstitutional.. not to mention the legislative/judicial gridlock it would cause..

No credible confirmation - just a few wackos posting non-sense on the nimbuster board.

Hopefully Mr. Davies will put in an appearance to let us know that the reports of his demise are a little premature.

Nahhh .. he'd rather sit back and watch everyone squirm.

That's ok - only a few weeks till Huntsville hamfest. We'll look him up then.

I wonder when some idiot power company employee, bored out of his gourd,
will hook up a KV line to 110V and watch the houses blow up. Of course,
he'd probably spend a few years in prison, possibly the rest of his life
if he kills somebody, but at least he'll have fun doing it. I doubt that
the people whose lives he destroys won't be laughing, and the judge
won't like his explanation of "I was bored, Your Honor, so I decided to
have a little fun".

Several times when my grandparents lived out in the country, lightning
hit their power pole and literally sent flames shooting out of the
electrical sockets. Somehow, their house never burned down, although
everything electronic was ruined and so was their wiring. My grandfather
estimated that the lightning bolt must have been hundreds of GIGAVOLTS,
if not teravolts.

The code is there so the pilot can verify, if necessary, that he is
tuned to the correct VOR. The Morse characters are printed on the
sectional chart next to the VOR symbol.

As far as the 5 wpm code goes it's near worthless. It there was an emergency the person would be more likely to die from old age by the time he got the message sent or copied. If there's going to be a code requirement it should be fast enough to accomplish something immediately rather than too late at 5 wpm. Let's start at 20 wpm and make everyone retest periodically so they won't get rusty. But there probably wouldn't be many hams left that could pass the 20. Actually I'd rather see the code dropped.

Considering the treatment you deal out to anyone you disagree
with, you have no damned standing to rail against some cursing in a
fucking movie. It's fiction, dumb shit. If the woman involved agreed
with you, she could also have refused to participate. So if they both
consented, you'r whining is without meaning. And do you really think
they give a rat's ass about your single-digit IQ criticism?

Continue to tell people to continue to tote -- it's about as
good as we can expect from a low grade moron like you.

Well, he probably wasn't better or worse than most other soldiers. He probably experienced his "golden hour" where the body and/or mind closes off any warning signals.

I know a person (Danish soldier) who experienced this in Ex Yogoslavia. A couple of mortars exploded just a few feet away from him, and he almost got blown to pieces. He didn't feel any pain and apart from the fact that he couldn't move, he felt just fine. He actually wondered why he couldn't move. It took about an hour, maybe one and a half, before the pain set in and he realized that those explosions had been more than fire crackers.

He still has a lot of splinters in his body, some in his testicles, which makes me wonder about the colour of a certain body fluid, but I havn't asked about that. What is more critical is the large number of splinters in the rest of his body. The organism tries to push these splinters out of the system, but what would happen if a minor splinter were pushed into one of the major veins?

But what has all this got to do with short wave? I know that the person I've written about is in the Signal Corps - I've been in the same company as him. But apart from that, this is OT.

So what else is new? The Chinese are undisputed masters at copying
other's technology. Their ability to reverse-engineer just about anything
is world renowned. I will bet their got ahold of the AEGIS technology
at either a surplus sale or on e-bay. (Laughing all the way to the bank as
they did not have to do any of the R&D to get it either!)

Yes, I think the Chinese are really overstepping by creating a modern
military force. Why would they have any interest in protecting a border
that stretches over 40,000 kilometers. :-)

(BTW "Burr" is one of many names used by someone with a very pointed
agenda)

his July 18 syndicated column, U.S. News & World Report senior writer Michael Barone made a series of false statements, claiming that former ambassador Joseph C. Wilson IV "lied" in a July 2003 op-ed he wrote for The New York Times. In his op-ed, Wilson contradicted the infamous "16-word" assertion from President Bush's 2003 State of the Union address that "the British government has learned that Saddam Hussein recently sought significant quantities of uranium from Africa."

Falsehood #1: Wilson claimed Cheney sent him to Niger

Barone repeated the frequently asserted falsehood that Wilson claimed in his Times op-ed that he was "sent by the CIA at the request of Vice President Dick Cheney" to investigate whether Iraq had sought uranium from Niger. In fact, Wilson never claimed that Cheney or his office requested the CIA send him to Niger. Rather, he claimed that the CIA sent him to Niger in an effort to satisfy requests from the Office of the Vice President for more information on the Niger-uranium allegation. The Senate Intelligence Committee's findings match Wilson's assertion:

Officials from the CIA's DO [Directorate of Operations] Counterproliferation Division [CPD] told committee staff that in response to questions from the Vice President's Office and the Departments of State and Defense on the alleged Niger-uranium deal, CPD officials discussed ways to obtain additional information. ... CPD decided to contact a former ambassador to Gabon [Wilson] who had a posting early in his career in Niger. [PDF p. 49]

Falsehood #2: Bush's "16 words" were well-founded

Barone defended President Bush's "16 words," noting that "the British government has stood by its report," but Barone failed to acknowledge that both the CIA and the Senate Intelligence Committee have repudiated Bush's claim, with the CIA explicitly dissenting from the British view.

Barone wrote:

Wilson's article said George W. Bush lied in his 2003 State of the Union Address when he said that British intelligence reported that Iraq had sought to buy uranium in Africa. But Wilson's mission covered only one country, and the British government has stood by its report.

In fact, a July 2003 statement by then-Director of Central Intelligence George Tenet explained that the CIA disagreed with the British on the uranium issue and that the "sixteen words should never have been included in the text written for the President." The Senate Intelligence Committee report on pre-war assessments of Iraq's weapons capabilities similarly concluded that after October 2002, when documents purporting to document the sale of Niger uranium to Iraq were exposed as forgeries, it was no longer "reasonable for analysts to assess that Iraq may have been seeking uranium from Africa". [PDF p. 82]

Falsehood #3: Wilson's report strengthened "the case against Saddam"

Barone also falsely claimed that following Wilson's trip, "the report that Wilson sent the CIA said that Iraq had sought to buy uranium from Niger in 1998, unsuccessfully." In fact, following his trip, Wilson reported that Iran, not Iraq, had attempted to purchase uranium from Niger in 1998, according to the Senate Intelligence Committee's report [PDF p. 54]. Barone was apparently echoing a July 2003 Washington Post article that erroneously reported that Iraq had attempted to purchase 400 tons of uranium from Niger in 1998. The Post has since added a correction to its article.

Barone wrote:

Moreover, the report that Wilson sent the CIA said that Iraq had sought to buy uranium in Niger in 1998, unsuccessfully; agency analysts concluded, not unreasonably, that this strengthened rather than weakened the case against Saddam.

Because the statement about Iraq in 1998 is false, Barone's assertion that the CIA concluded from this that their case against Saddam was strengthened is, of course, also false.

While the Senate Intelligence Committee report did state that "most analysts" thought Wilson's report as a whole supported the theory that Saddam sought uranium from Niger, analysts at the State Department's Bureau of Intelligence and Research interpreted the report as support for their competing assessment that "Niger was unlikely to be willing or able to sell uranium to Iraq":

The report on the former ambassador's trip to Niger, disseminated in March 2002, did not change any analysts' assessments of the Iraq-Niger uranium deal. For most analysts, the information in the report lent more credibility to the original Central Intelligence Agency (CIA) reports on the uranium deal, but State Department Bureau of Intelligence and Research (INR) analysts believed that the report supported their assessment that Niger was unlikely to be willing or able to sell uranium to Iraq. [PDF p. 83]

The Senate Intelligence Committee also concluded that INR's overall assessment of Iraq's nuclear program, which Wilson's Times op-ed supported, was the correct assessment based on the intelligence available at the time:

After reviewing all the intelligence provided by the Intelligence Community and additional information requested by the Committee, the Committee believes that the judgment in the National Intelligence Estimate (NIE), that Iraq was reconstituting its nuclear program, was not supported by the intelligence. The Committee agrees with the State Department's Bureau of Intelligence and Research (INR) alternative view that the available intelligence "does not add up to a compelling case for reconstitution."

Looks like Li,Chanchun<L,C@ccp.gov.cn> may have been right when he said
China is secretly backing the muslim terrorists.

U.K. police shot and killed a man this morning who they say was a suicide
bomber. The thing is he was Asian, not
an arab. Of course this means nothing as he could just be a lone kook. But,
I'm surprised by him being Asian. The first person I thought about was
Li,Chanchun and his post about China and terrorism.

Makes sense to me.

The so called Third Generation Sat 800 is a term that was started by our favorite e-Bay scamster. It was so effective a marketing tool that it was picked up by Lextronix/Eton and used in their promotional materials. Its use was also strongly encouraged when setting up the numerous Grundig drop-ship "retailers" on e-Bay and other other outlets. But the term is entirely fictional. It has no meaning.

There is only ONE change in the Sat 800 over its entire production cycle: ball bearings on the tuning shaft. No other changes were made throughout the life cycle of the product. This according to an insider from Lextronix, now Eton, and reported here, numerous times.

Though QC appeared to have improved in successive production runs, the rate of failure was still high enough in later runs to require a significant percentage of refurbishment at Drake.

If you're really determined to go with this radio, find one that has been through the Drake repair center. History and user comments in these fora strongly suggest that there is no guarantee of a quality unit simply by selecting from 'desirable' serial numbers.

All of the 'fixes'--- all ONE of them--- are found in any unit with a ball bearing tuning shaft.

There is an 85 year old guy who lives down the street from me and he was in the U.S.Army 149th Signal Company in Europe in World War Two.They wanted to put him in radio but he told them he couldn't get the knack of learning Morse Code (or something like that) so he wound up in Motor Pool repairing Trucks and Jeeps and whatever other vehicles.There is another guy about his age who lives in Mesquite,Texas.(surburb city on the East side of Dallas) He was in the U.S.Navy in Asia and he is a Ham Radio operator.I don't know if he still post at www.lucianne.com or not.He goes by the handle of Duke of Duval,his name is AL.Perhaps some of y'all have talked to him before via radio.He and I used to email back and forth quite often.

I don't know about that. I know two people that will probably get their license as soon as the CW is gone. They hate it more than I do and have no interest in anything but HF. It's not a matter of "laziness", it's a matter of time management and not wanting to waste time learning something the won't use. And partly pure stubbornness, I'm sure. Even though I passed 5WPM in 73, I was totally put off by CW as a Novice, and didn't get my license back until 90.

With each passing day, the manufactured "scandal" over the publication of Valerie Plame's relationship with the CIA establishes new depths of mainstream-media hypocrisy. A highly capable special prosecutor is probing the underlying facts, and it is appropriate to withhold legal judgments until he completes the investigation over which speculation runs so rampant. But it is not too early to assess the performance of the press. It's been appalling.

Is that hyperbole? You be the judge. Have you heard that the CIA is actually the source responsible for exposing Plame's covert status? Not Karl Rove, not Bob Novak, not the sinister administration cabal du jour of Fourth Estate fantasy, but the CIA itself? Had you heard that Plame's cover has actually been blown for a decade - i.e., since about seven years before Novak ever wrote a syllable about her? Had you heard not only that no crime was committed in the communication of information between Bush administration officials and Novak, but that no crime could have been committed because the governing law gives a person a complete defense if an agent's status has already been compromised by the government?
No, you say, you hadn't heard any of that. You heard that this was the crime of the century. A sort of Robert-Hanssen-meets-Watergate in which Rove is already cooked and we're all just waiting for the other shoe - or shoes - to drop on the den of corruption we know as the Bush administration. That, after all, is the inescapable impression from all the media coverage. So who is saying different?
The organized media, that's who. How come you haven't heard? Because they've decided not to tell you. Because they say one thing - one dark, transparently partisan thing - when they're talking to you in their news coverage, but they say something completely different when they think you're not listening.
You see, if you really want to know what the media think of the Plame case - if you want to discover what a comparative trifle they actually believe it to be - you need to close the paper and turn off the TV. You need, instead, to have a peek at what they write when they're talking to a court. It's a mind-bendingly different tale.
SPUN FROM THE START
My colleague Cliff May has already demonstrated the bankruptcy of the narrative the media relentlessly spouts for Bush-bashing public consumption: to wit, that Valerie Wilson, nee Plame, was identified as a covert CIA agent by the columnist Robert Novak, to whom she was compromised by an administration official. In fact, it appears Plame was first outed to the general public as a result of a consciously loaded and slyly hypothetical piece by the journalist David Corn. Corn's source appears to have been none other than Plame's own husband, former ambassador and current Democratic-party operative Joseph Wilson - that same pillar of national

security rectitude whose notion of discretion, upon being dispatched by the CIA for a sensitive mission to Niger, was to write a highly public op-ed about his trip in the New York Times. This isn't news to the media; they have simply chosen not to report it.

The hypocrisy, though, only starts there. It turns out that the media believe Plame was outed long before either Novak or Corn took pen to paper. And not by an ambiguous confirmation from Rove or a nod-and-a-wink from Ambassador Hubby. No, the media think Plame was previously compromised by a disclosure from the intelligence community itself - although it may be questionable whether there was anything of her covert status left to salvage at that point, for reasons that will become clear momentarily.

This CIA disclosure, moreover, is said to have been made not to Americans at large but to Fidel Castro's anti-American regime in Cuba, whose palpable incentive would have been to "compromise[] every operation, every relationship, every network with which [Plame] had been associated in her entire career" - to borrow from the diatribe in which Wilson risibly compared his wife's straits to the national security catastrophes wrought by Aldrich Ames and Kim Philby.

THE MEDIA GOES TO COURT ... AND SINGS A DIFFERENT TUNE

Just four months ago, 36 news organizations confederated to file a friend-of-the-court brief in the U.S. Court of Appeals in Washington. At the time, Bush-bashing was (no doubt reluctantly) confined to an unusual backseat. The press had no choice - it was time to close ranks around two of its own, namely, the Times's Judith Miller and Time's Matthew Cooper, who were threatened with jail for defying grand jury subpoenas from the special prosecutor.

The media's brief, fairly short and extremely illuminating, is available here. The Times, which is currently spearheading the campaign against Rove and the Bush administration, encouraged its submission. It was joined by a "who's who" of the current Plame stokers, including ABC, NBC, CBS, CNN, AP, Newsweek, Reuters America, the Washington Post, the Tribune Company (which publishes the Los Angeles Times and the Baltimore Sun, among other papers), and the White House Correspondents (the organization which represents the White House press corps in its dealings with the executive branch).

The thrust of the brief was that reporters should not be held in contempt or forced to reveal their sources in the Plame investigation. Why? Because, the media organizations confidently asserted, no crime had been committed. Now, that is stunning enough given the baleful shroud the press has consciously cast over this story. Even more remarkable, though, were the key details these self-styled guardians of the public's right to know stressed as being of the utmost importance for the court to grasp - details those same guardians have assiduously suppressed from the coverage actually presented to the public.

Though you would not know it from watching the news, you learn from reading the news agencies' brief that the 1982 law prohibiting disclosure of undercover agents' identities explicitly sets forth a complete defense to this crime. It is contained in Section 422 (of Title 50, U.S. Code), and it provides that an accused leaker is in the clear if, sometime before the leak, "the United States ha[s] publicly acknowledged or revealed" the covert agent's "intelligence relationship to the United States[.]"

As it happens, the media organizations informed the court that long before the Novak revelation (which, as noted above, did not disclose Plame's classified relationship with the CIA), Plame's cover was blown not once but twice. The media based this contention on reporting by the indefatigable Bill Gertz - an old-school, "let's find out what really happened" kind of journalist. Gertz's relevant article, published a year ago in the Washington Times, can be found here.

THE MEDIA TELLS THE COURT: PLAME'S COVER WAS BLOWN IN THE MID-1990s

As the media alleged to the judges (in Footnote 7, page 8, of their brief), Plame's identity as an undercover CIA officer was first disclosed to Russia in the mid-1990s by a spy in Moscow. Of course, the press and its attorneys were smart enough not to argue that such a disclosure would trigger the defense prescribed in Section 422 because it was evidently made by a foreign-intelligence operative, not by a U.S. agency as the statute literally requires.

But neither did they mention the incident idly. For if, as he has famously suggested, President Bush has peered into the soul of Vladimir Putin, what he has no doubt seen is the thriving spirit of the KGB, of which the Russian president was a hardcore agent. The Kremlin still spies on the United States. It remains in the business of compromising U.S. intelligence operations.

Thus, the media's purpose in highlighting this incident is blatant: If Plame was outed to the former Soviet Union a decade ago, there can have been little, if anything, left of actual intelligence value in her "every operation, every relationship, every network" by the time anyone spoke with Novak (or, of course, Corn).

THE CIA OUTS PLAME TO FIDEL CASTRO

Of greater moment to the criminal investigation is the second disclosure urged by the media organizations on the court. They don't place a precise date on this one, but inform the judges that it was "more recent" than the Russian outing but "prior to Novak's publication."

And it is priceless. The press informs the judges that the CIA itself "inadvertently" compromised Plame by not taking appropriate measures to safeguard classified documents that the Agency routed to the Swiss embassy in Havana. In the Washington Times article - you remember, the one the press hypes when it reports to the federal court but not when it reports to consumers of its news coverage - Gertz elaborates that "[t]he documents were supposed to be sealed from the Cuban government, but [unidentified U.S.] intelligence officials said the Cubans read the classified material and learned the secrets contained in them."

Thus, the same media now stampeding on Rove has told a federal court that, to the contrary, they believe the CIA itself blew Plame's cover before Rove or anyone else in the Bush administration ever spoke to Novak about her. Of course, they don't contend the CIA did it on purpose or with malice. But neither did Rove - who, unlike the CIA, appears neither to have known about nor disclosed Plame's classified status. Yet, although the Times and its cohort have a bull's eye on Rove's back, they are breathtakingly silent about an apparent CIA embarrassment - one that seems to be just the type of juicy story they routinely covet.

A COMPLETE DEFENSE?

The defense in Section 422 requires that the revelation by the United States

have been done "publicly." At least one U.S. official who spoke to Gertz speculated that because the Havana snafu was not "publicized" - i.e., because the classified information about Plame was mistakenly communicated to Cuba rather than broadcast to the general public - it would not available as a defense to whomever spoke with Novak. But that seems clearly wrong. First, the theory under which the media have gleefully pursued Rove, among other Bush officials, holds that if a disclosure offense was committed here it was complete at the moment the leak was made to Novak. Whether Novak then proceeded to report the leak to the general public is beside the point - the violation supposedly lies in identifying Plame to Novak. (Indeed, it has frequently been observed that Judy Miller of the Times is in contempt for protecting one or more sources even though she never wrote an article about Plame.)

Perhaps more significantly, the whole point of discouraging public disclosure of covert agents is to prevent America's enemies from degrading our national security. It is not, after all, the public we are worried about. Rather, it is the likes of Fidel Castro and his regime who pose a threat to Valerie Plame and her network of U.S. intelligence relationships. The government must still be said to have "publicized" the classified relationship - i.e., to have blown the cover of an intelligence agent - if it leaves out the middleman by communicating directly with an enemy government rather than indirectly through a media outlet.

LINGERING QUESTIONS

All this raises several readily apparent questions. We know that at the time of the Novak and Corn articles, Plame was not serving as an intelligence agent outside the United States. Instead, she had for years been working, for all to see, at CIA headquarters in Langley. Did her assignment to headquarters have anything to do with her effectiveness as a covert agent having already been nullified by disclosure to the Russians and the Cubans - and to whomever else the Russians and Cubans could be expected to tell if they thought it harmful to American interests or advantageous to their own? If Plame's cover was blown, as Gertz reports, how much did Plame know about that? It's likely that she would have been fully apprised - after all, as we have been told repeatedly in recent weeks, the personal security of a covert agent and her family can be a major concern when secrecy is pierced. Assuming she knew, did her husband, Wilson, also know? At the time he was ludicrously comparing the Novak article to the Ames and Philby debacles, did he actually have reason to believe his wife had been compromised years earlier?

And could the possibility that Plame's cover has long been blown explain why the CIA was unconcerned about assigning a one-time covert agent to a job that had her walking in and out of CIA headquarters every day? Could it explain why the Wilsons were sufficiently indiscrete to pose in Vanity Fair, and, indeed, to permit Joseph Wilson to pen a highly public op-ed regarding a sensitive mission to which his wife - the covert agent - energetically advocated his assignment? Did they fail to take commonsense precautions because they knew there really was nothing left to protect?

We'd probably know the answers to these and other questions by now if the media had given a tenth of the effort spent manufacturing a scandal to reporting professionally on the underlying facts. And if they deigned to

share with their readers and viewers all the news that's fit to print ... in a brief to a federal court.
- Andrew C. McCarthy, a former federal prosecutor, is a senior fellow at the Foundation for the Defense of Democracies.

Not really, an open book test perhaps.

5210. The World's Most Silly Technology Law(CW)

Newsgroup: rec.radio.shortwave
Date: 2005-07-22 14:58:10 UTC
From: Anonymous-Remailer@See.Comment.Header
Message-ID: <YAXQ6LHW38555.4153935185@anonymous.poster>
Source record: 28749

The World's Most Silly Technology Law
Bruce Perens<bruce@perens.com>

When we talk about bad technology laws, we're generally discussing cryptography export restrictions or software patents. Here's a look at an older technology law that, though absurd, is still being enforced today. Consider it a warning about how inappropriate and obsolete Internet legislation could become.
A lot of people who are interested in technology become ham radio operators. Ham radio can be very educational in a way the Internet can't touch: you can learn about analog electronics, and about the synthesis of analog and digital that is wireless data communications. You can build your own equipment from the ground up, while most computer folks only get to plug cards together. You can communicate around the world without an Internet - with nothing but air between you and the person you're talking to. You can even call up Mir or the Space Shuttle, or operate one of many satellites that hams have built and had launched as "hitch-hikers" along with commercial space payloads.

So, with all of that fun to have, why don't more people do it? The world's most silly technology law is stopping them. In order to be licensed to operate a ham radio station with international range, you must pass a test on the ability to receive Morse code by ear.
Now of course it's been a long time since the invention of the microphone, but hams are still compelled to learn to read dots and dashes as if they were Western Union telegraphers from the 1800's! Specifically, U.S. hams are required by the FCC to pass a Morse code test at 13 words per minute to operate below 30 MHz, and there are similar laws in other nations. Although there's a no-code license in the U.S. that allows operation above 30 MHz, those frequencies are, in general, useful to communicate across a city rather than around the world.

There was a logical reason to pass this law in the 1920's. Military stations needed a way to order the hams off of the air if the country went to war, or if the hams were interfering with the military stations during peacetime. Since the military didn't have any voice radios, they required the hams to learn Morse Code so that they'd understand when they were given government orders. Another reason for having the hams know Morse was that the government wanted telegraphers for communication during wartime. It took a long time to train a telegrapher, so it was easier to just draft a ham who had already learned the code.

When the International Telecommunications Union treaties were drawn, this Morse code requirement was included in them. Thus, it became international law, and countries that signed the treaty (almost every country) were bound to require Morse code of their hams. The treaty still exists today - in fact it's been expanded to govern most international communications by radio, telephone, satellite, and even the Internet. If the FCC decides to drop Morse code testing today, the U.S. will be violating this treaty. Thus, to change the law we may have to get the ITU to meet in

Geneva, and have representatives of all countries vote. The problem is that ITU's agenda is full until about 2005 - they only meet once every few years, and they're not even willing to consider the question until then. Getting all countries to vote the way you want is no picnic, either.

With the advent of voice radios, you would have thought that Morse code regulations would wither and die. However, many hams were enamored of Morse becuase they thought it helped keep the "riff-raff" off of the air. Learning Morse code was a long and difficult initiation that would keep the only-casually-interested person from becoming a ham. Around 1936, ARRL, a national ham radio organization in the U.S., felt that the ham frequencies would become saturated if many more people became hams. They asked FCC to raise the Morse code testing speed requirement to 12.5 words-per-minute, as this was felt to be difficult enough to keep most people out of ham radio. FCC didn't like the .5 in 12.5 and they raised the rate to 13.

Today, ARRL wants to back off of the code requirement somewhat. Over-saturation of the ham frequencies isn't the problem they predicted, even though there are many more hams now than there were in 1936. ARRL still hasn't been convinced that code testing should be dropped entirely, but they have asked the FCC for the code testing speed to be only 5 words per minute, which is a lot easier to learn than 13. Although they can lower the speed, FCC probably can not drop the code testing even if they want to, because of the international treaty. Meanwhile, the educational opportunities of Amateur radio are still being wasted due to this silly law.

Unfortunately, many older hams who have already passed high-speed code tests are fighting to keep the tests in place. They don't really want newcomers "spoiling" their frequencies. Some of them have even asked me to let ham radio "die with dignity" rather than be polluted by people who don't know code!

In 1997, I founded No-Code International to fight the Morse Code testing requirement for Amateur Radio licensing. NCI has been growing rapidly, and today has members in 36 countries. We're lobbying ITU, FCC, and most national governments to drop Morse code testing. The following links will help you learn more about this.

No-Code International (NCI)
Bruce Perens' comment to FCC on Code Testing
ARRL's Amateur License Restructuring web pages.
ARRL's Web Site - A good place to start learning about Amateur Radio.
Other Essays by Bruce Perens.
About the author: Bruce Perens holds an Amateur Extra, the highest grade of ham radio license, for which he passed a 20-word-per-minute Morse code exam and a much-better-justified series of tests on electronics, radio operations, and safety. His ham radio callsign is K6BP. He's currently building a satellite station intended to talk to the International Space Station's ham radio.

No not really. I've tried to copy some 2m repeater CW but its a bit fast for
me. Is there someplace online you can try/practice it?

<< The ARS written test has been a joke for years. All the answers are published, all one has to do is buy the book and memorize the answers.. no need to actually KNOW anything >>

a bit of a strawman argument, as the other FCC exams are also published. When I tested for my 1st Class lic back in 78 (now the GROL) we learned the test by taking and retaking older tests, provided to us at Brown Inst by the FCC themselves.

You still gotta know the maths to do the formulae, etc. But most the other regualtory stuff is easy to whip by rote memory...

I don't see wiping away the CW req. to really boost the roles of us hams, it's a slowily dying hobby, well not dying, I don;t think it'll ever go dark on us, but it ain't what it was.

I was in ham radio outlet in Sunnyvale, CA yesterday and asked about this particular issue as there are not many SWL receivers now in the ~$500 range. I was told that they had talked to Icom about it (They move a LOT of Icom out of this HRO location, very friendly with them.) and that Icom had to discontinue it because one of the key component suppliers went out of business and there weren't alternatives for that component. They said they had spoken to Icom and that they were working on redesigning the R75 into a new radio without the component. If this is in fact true, they'll likely release it as a new radio. (Anyone for an IC-R85?)

Icom, if you're reading this, please fix the SSB on the new one, and keep all the stuff about the R75 we all love. Oh, and it would be really nice if you continue to include the DSP option, in fact, just put it in as standard at the factory. Widen out the AM just a tad to improve program listening for those of us who don't always want to chase utility, improve the speaker just a bit too. Oh, and try to keep the ~$500 price point, I think that is the sweet spot for tabletop units. Should produce enough sales volume for you to own this segment of the tabletop market. I'd even pay ~$600 for all the improvements.

p.s. a nice option would be a daughter board like the JRC-545 for a few hundred dollars that allows me to expand it into a wide-coverage receiver. That way you won't have to put out a replacement for the 8500...

The dirty little secret is that ALL Federally required tests are
published as required by law. Even FAA tests are published.

The testing issue is not an issue. And hasn't been for a long time.

And they're all multiple choice.

People can purchase a whole computer, including monitor and keyboard
for less than darn glorified radio...

... obliviously, this is not working like it used to...

Buy a cheap degen, put up a good antenna and you are in business...
$500+ dollars more just for a bit of signal improvement is obviously
not worth it, only the brain dead still pursue that route...

Well, the woman in question was an actress. She presumably knew that a good cursing out for her was coming up in the script. So, she was a willing participant. She was probably paid handsomely, too.

If the price was right, I'd gladly let Clint (or anyone else) give me a cursing. And to think I've been giving it away for free all these years!

I believe and know that. They seized power and had their 911 plan already in place or at least they knew about it and did nothing.

Even 80 year old mom saw thru it. She said "you mean to tell me they got away with hyjacking 4 planes on the same day without getting caught and got away with finishing their job without any us doing anything to stop them? You mean to tell me they couldn't stop any of these planes? Both went into the WTC"??

And she's right. You can't fool all the people all the time. Bush, Cheney are both war criminals. I believe one day this will all come out. Someone on their death bed will talk. They send young kids to die for own gain and the gain of their alliances. We're talking billions and billions of dollars.

I don't think that is fair or nice statement.
While I like my DE 1103 a lot, I sure as hell can't DX on it like I can on my R75.
And I'm insulted you group people in this hobby as "brain dead" cause they want a better quality receiver.

You cannot compare the Degen to the Icom R75 with even the best of antennas. Yes you'll pick up many of the signals but that's it. Not very enjoyable listening for SSB but for outdoor use it suffices.

Uncle Sam wants you ? even if you?re 42 years old

Army Times | July 22 2005

The Defense Department quietly asked Congress on Monday to raise the maximum age for military recruits to 42 for all branches of the service. Under current law, the maximum age to enlist in the active components is 35, while people up to age 39 may enlist in the reserves. By practice, the accepted age for recruits is 27 for the Air Force, 28 for the Marine Corps and 34 for the Navy and Army, although the Army Reserve and Navy Reserve sometimes take people up to age 39 in some specialties.

The Pentagon?s request to raise the maximum recruit age to 42 is part of what defense officials are calling a package of ?urgent wartime support initiatives? sent to Congress Monday night prior to a Tuesday hearing of the House Armed Services military personnel subcommittee.

At that hearing, David S.C. Chu, under secretary of defense for personnel and readiness, said he felt the military?s recent problems with recruiting were improving, but that additional incentives would help.

Chu mentioned the age change in passing during the hearing but gave no other details, such as whether any of the services were seriously considering recruiting 42-year-olds.

Most of the initiatives in the package were previously requested by the Bush administration as part of the 2006 defense budget, which is pending before Congress. They include raising the maximum re-enlistment bonus to $90,000; maximum hardship duty pay to $750 a month; special pay and incentive bonuses for nuclear qualified officers to $30,000; assignment incentive pay to $3,000; and increasing accession and affiliation bonuses for reservists.

The request, not yet approved by the White House, also asks lawmakers to revise some benefits proposals already before Congress.

For example, the Bush administration originally asked Congress to increase enlistment bonuses to $30,000, but the Pentagon now wants bonuses of up to $40,000.

The administration also asked for an Army-only test of a $1,000 referral bonus that would be paid to current soldiers if they get someone to enter the Army and make it through basic and advanced training. Now, the Pentagon wants that payment to be $2,500.

The request also includes a new Army initiative that officials are calling the Army Home Ownership program. It would set aside money for new recruits that could be used to buy a home at the end of an enlistment, an idea that Army officials believe will help convince parents and other ?adult influencers? of service-age youths about the

benefits of joining the military.

Lawmakers are sympathetic to the need to do more. Rep. John McHugh, R-N.Y., said he is willing to look at new pay-and-benefits initiatives, although he personally believes that what the Pentagon needs is an increase in personnel to cut the workload on active and reserve service member.

Rep. Vic Snyder of Arkansas, the subcommittee's ranking Democrat, also vowed to help.

"Recruitment is a challenge right now," Snyder said. "Both the military and Congress are working on solutions, but I expect these challenges will be with us for some time. Military service is honorable and can be a real growing opportunity for a young man or woman."

In fact, why bother with any of this ancient junk being sold at too
high a price...

Here is 9Khz to 180Mhz for anyone with a computer, I got mine off ebay
for $200, but suddenly don't see 'em there any more, guess the idgits
that wanna pay too much have already chased the price up quite a bit!
http://www.thiecom.de/english/g313i/

All you need is a computer with pci slots and you have a real
state-of-the-art receiver...

They need instructions on the bottle which make it very plain that the results of using their product are directly related to ones ability to follow simple written instruction and apply the use of simple logic.

Can you write clear enough to make yourself understood (this is unclear from your past posts here), anyway, if so, write them and explain what has happened, perhaps they have a "welfare-tail-light-replacement-plan" and will help ya out a bit.

Just a thought, hope it helps...

Executive Order No. 9066

The President

Executive Order

Authorizing the Secretary of Defense to Prescribe Military Areas

Whereas the successful prosecution of the war requires every possible protection against espionage and against sabotage to national-defense material, national-defense premises, and national-defense utilities as defined in Section 4, Act of April 20, 1918, 40 Stat. 533, as amended by the Act of November 30, 1940, 54 Stat. 1220, and the Act of August 21, 1941, 55 Stat. 655 (U.S.C., Title 50, Sec. 104) ;

Now, therefore, by virtue of the authority vested in me as President of the United States, and Commander in Chief of the Army and Navy, I hereby authorize and direct the Secretary of Defense, and the Military Commanders whom he may from time to time designate, whenever he or any designated Commander deems such action necessary or desirable, to prescribe military areas in such places and of such extent as he or the appropriate Military Commander may determine, from which any or all persons may be excluded, and with respect to which, the right of any person to enter, remain in, or leave shall be subject to whatever restrictions the Secretary of Defense or the appropriate Military Commander may impose in his discretion. The Secretary of Defense is hereby authorized to provide for residents of any such area who are excluded therefrom, such transportation, food, shelter, and other accommodations as may be necessary, in the judgment of the Secretary of Defense or the said Military Commander, and until other arrangements are made, to accomplish the purpose of this order. The designation of military areas in any region or locality shall supersede designations of prohibited and restricted areas by the Attorney General under the Proclamations of December 7 and 8, 1941, and shall supersede the responsibility and authority of the Attorney General under the said Proclamations in respect of such prohibited and restricted areas.

I hereby further authorize and direct the Secretary of Defense and the said Military Commanders to take such other steps as he or the appropriate Military Commander may deem advisable to enforce compliance with the restrictions applicable to each Military area hereinabove authorized to be designated, including the use of Federal troops and other Federal Agencies, with authority to accept assistance of state and local agencies.

I hereby further authorize and direct all Executive Departments, independent establishments and other Federal Agencies, to assist the Secretary of Defense or the said Military Commanders in carrying out this Executive

Order, including the furnishing of medical aid, hospitalization, food, clothing, transportation, use of land, shelter, and other supplies, equipment, utilities, facilities, and services.

This order shall not be construed as modifying or limiting in any way the authority heretofore granted under Executive Order No. 8972, dated December 12, 1941, nor shall it be construed as limiting or modifying the duty and responsibility of the Federal Bureau of Investigation, with respect to the investigation of alleged acts of sabotage or the duty and responsibility of the Attorney General and the Department of Justice under the Proclamations of December 7 and 8, 1941, prescribing regulations for the conduct and control of alien enemies, except as such duty and responsibility is superseded by the designation of military areas hereunder.

George W. Bush

The White House,

No you fucking idiot the Supreme Court did not "vote" Bush in.
What a dumb ass thing to even say. Classic example of Your extreme
lack of any governmental or congressional knowledge. The Supreme
Court quite simply followed the rules for presidential elections that have
been in place for a long time. And you call me the simpleton???????????
Go read a fucking book and actually learn something. I love it
when radical libs get their feathers ruffled,,, they lose all semblance
of rationality. What the Supreme Court did was to stop the "selective"
and illegal recounting methodology used by the dems. to try and throw
Gore over the top. It didnt work, even after the election was long
over with at least 4 seperate recounts by independent orgs. still had
Bush winning with an even larger number than before the election
was over. So in retrospect the Supreme Court was right on with
their decision. So get over it dipshit.

Well, if you have a very fast processor and no need for speed or the
power, java can be pressed into a functional use...

However, when you already have the syntax of C++, why tie your hands
with java, a pseudo-language really... it steals C syntax to run
scripted and byte code...

Of course, if you don't understand the difference of a real
programming language which is compiled and linked--as opposed to java,
it is a moot point...

I would say that to do what you suggest would require a Constitutional
Amendment. I dont belive you can "legislate" veto power over the
S. Court. The founding fathers had it right the first time. I dont think
this is realistically going to happen.

A general rule of thumb was (and still is) to buy the
Sat 800 from a reputable dealer, such as Universal.
We used to argue about this back when the Sat 800
was released, Peter. It always seemed that the Sat
800's sold by Universal seemed to work fine, but
the Sat 800's sold by places like The Sharper Image
seemed to have a high failure rate.

> If you're really determined to go with this radio, find one that

That's rather odd. When I spoke to the Drake people
when I went to pick up my Sat 800 after a tuneup, they
said that they made several changes authorized by Eton
as part of bringing my Sat 800 (one of the first ones
sold) up to the current model. I didn't press them on it,
but several usually means more than one, and I don't
think they meant the couple of caps that were bad and
needed replacing, either.

Also, I do know that Lextronics did replace the original
power supply after a lot of people complained about
the RF in them; I did complain, and received a different
power supply model free of charge.

>logical conviction?

The real reason for the Morse requirement was, (three quarters of a century ago or so, after WW I), to maintain a pool of people that could be inducted into the military in times of war to maintain communications on the battlefield. Learning Morse is not a natural act. Nor, for more than a small percentage of the population, very easy. Getting a bunch of Signal Corps cannon fodder to train themselves was a great boon.

Back about 20 years ago, when Digital Signal Processor ICs were first coming out, I did a bunch of library research on the possiblity of building a box that could match the performance of a human operator. The newest paper I could find on the actual use of CW, in the open literature, was from 1959. They were no longer interested in using it. It takes too long to train an operator, and the data transmission capacity is too low. And if the radio operator gets shot...

(There was, reportedly, a lot of expertise in the NSA and its military affiliates in automated CW intercepts, as the Soviet Union and third world still had a lot of tactical comm. in CW at that time).

But at that same time, 20 years ago, I got some insight, (at a job interview), into what the miltary was planning for the future. It was automating an entire infantry division with packet radio. Not much reason to learn Morse code when the field radios had 20 kbps (?) packet modems built in, and the field officers could just plug the Grid portable into them.

So the military no longer has any need and it's taken 40 years for the ham "community" to figure this out.

I bought a new one from Universal 4 months ago. It has a wobbly tuning knob
and intermittent tuning.

Good luck running that cobol on any modern application servers like
Websphere or Weblogic.

I meant that they learned that with the IRA, it's smarter
to shoot first, not that the IRA taught them.

Oh yeah, somebody has to keep those old legacy systems running. The
ones that do the job so well because they are simple for end users.

Oh really, funny? Well, yah, funny the cobol'ers/fortran'ers don't
get a clue...

But then look at ham radio, took up till now for CW to be dropped,
with the "religious fanatic following" screaming right up till the
last moment that CW would live forever.

Now they stand looking like "dumbkoffs" and worse...

Does it surprise anyone that there are groups like this on the subject
of computer languages? Well, I suppose so, but "dumbkoffs" exist
there too...

ahhh yes, the good ol green screens. Our applications still run on the good
ol AS400, though that may change once we make the switch.

Who are you talking to?

I am C++/assembly on the IBM platform here (mostly, there is always
some old code someone wants to maintain, somewhere)...

Sure in the past I have done COBOL, pascal, fortran, snobal, visual
basic, basic, etc, etc... but years ago now...

I realized the first time I seen "C" that it was the future, however,
took me a bit to accept that openly (month or two while I picked up
the syntax, back in the 90's)

COBOL is as dead as CW, but old farts still use it...

Java can do most all of what perl can do, perl just does it better...
for a "compiled script language" perl rocks...

According to the NASA website:

"NASA is wrapping up work on Discovery's fuel sensor circuit problem and now plans to pick up the countdown Saturday, with a launch no earlier than 10:39 a.m. EDT on Tuesday, July 26."

I'll try to monitor 10780 khz on Monday, July 25 in the hope of learning which frequencies to tune to during and after the launch. If I miss the announcement, hopefully someone else will catch it.

Steve

Never took a course in cobol, but used to help students debug their code
at the computer center. Wordy is an understatement.

It seemed they needed about a page of code to get the title up.

At the time, I liked fortran. But it's been years since I had time to
write my own software.

The only relevant rule for an election is that the intent of the
voter must be respected. No undue harm would have come to anyone by
counting all the votes.

I remember the arguments. Yes, Universal sold rigs seemed to have fewer difficulties. Universal's own people admitted that they had opened and tested/verified each unit sold. While the distributor, Lextronix, seemed to have trouble keeping Universal supplied, while SA, Heartland, Damark and other discount outlets seemed to be blowing them into the streets at will.

There is a lot about this radio that has never been adequately explained by Lextronix. Why Universal, Grove and other reputable radio dealers had trouble getting their hands on them, while SA had so many of them in store rooms that they discontinued accepting shipments, is only one. Others include the more than deceptive marketing, which included direct mail pieces claiming that the radio was actually designed by Grundig engineers, when it wasn't (Grundig not only had no part in this radio, they actually refused to acknowledge it. And one Grundig engineer who regularly participated on one of the Grundig/Satellit discussion groups of which I was a member actually called it an embarrassment to the name.) One direct mail piece I received claimed that Sat 800, was in fact, a German radio. I sent that one back to Lextronix with a big red circle around that claim and instructed them to remove my name from all mailing lists. (Which, to my surprise, they actually did.) But there were no corrections in promotional literature. Why information about this radio has been so jealously guarded, that schematics and service manuals have not been available from official sources (unlike any other Grundig product for which service manuals, parts and service information have been readily available), is another question that's never been answered. Break an antenna, get a replacement? Try that one sometime.

Why Radio Nederland was never able to get a factory sample for evaluation afer being promised publicly that they would (remember Sundstrom had to purchase not one, but two, at retail from SA to finally get a review written), and yet, Larry (endorse-it-before-the-prototype-has-been-produced) Magne got not one, but three of them at a time from the factory, all hand tweaked, for not one, not two, but THREE evaluations, for a total of NINE receivers. From the factory. But no other reviewer was countenanced by Lextronix on this product.

And there are more questions. But these alone paint a picture of a product that's more mystery than substance under the hood. Why, in fact, has so much been made about Drake's involvement in SAT 800, but nowhere does the name of Drake appear in any of the direct mail pieces, or advertising. And no one, even inside Drake, can actually explain what Drake's involvement was. One person here, reported a conversation with a Drake employee who said that Drake's involvement was in the design and licensing of the sync detector, and no more. Another post here detailed

a conversation with a Drake technician who said that the total involvement was a couple of conversations about the IF strip of SW-8. But definitive information is still missing. That's not true of any other product mentioned here.

Hell, anyone can call someone at ICOM and get detailed information, even parts, even full documentation on their products, at will. But this radio, produced under so many deceptions, remains a mystery. With only marketing department smoke and mirrors consistently available to the public.

Rarely has so much passion been on display about a product that so few people know so little about, with such a history of substandard quality.

Yes, I remember the arguments. I remember them well. Amused by them, in fact. Because they were SO fierce, in wake of the overwhelmingly deceptive marketing of this product. They remind me of the arguments we had in a World Religion class I recently took. A lot of fierce passion and faith. And a whole lot of ignoring any perspective other than our own.

As someone said at the beginning, it's real clear that Marketing is driving this train. That the company that claims to have produced this radio has neither an engineering department, nor a manufacturing facility, and has so obscured the lineage of the product that the only thing that users are really buying for their $500 or so, is the advertising.

Now specifically: the external power supply change is not a production change. The external power supply is not really part of the radio, as much as it's an accessory. They changed to a different model/vendor for the external power supply. And it was made available to any purchaser. That's not a production change to the radio.

There have been reported that some of the Drake refurbished models were modified to be different than production models, with changes made by Drake in the shop. Some Drake technicians have supported this claim. Specifics seem always to be lacking when pressed as to what those changes actually are. Always 'to bring them up to current production' is the claim. But that's something you hear about ANY product in for refurbishment. It's standard Marketing Mantra 1-1A. A appeasement. But at Lextronix, insiders are admitting that there have been no changes to production, with the single exception of the bearings on the tuning shaft. Now, Drake technicians would be able to make modifications to SAT 800 models in for refurbishment, in the same way that they were able to make modifications to their own radios. After all, SAT 800 is reputed to be a clone of SW-8. This after Drake engineers and technicians have publicly said that many of the parts that went into SW-8 were out of production and no longer available, btw. Truth is, that the only thing that made SW-8 unique was the IF strip, and of that, only the sync detector. So, while parts for SW-8 may no longer be available, Tecsun, the actual manufacturer of SAT 800, being experienced in radio design

and manufacture, can easily create their own circuits using parts of their own selection and tie them into a Drake inspired, if not designed, IF strip, using a Drake designed sync. Drake's involvement could be slight, at best. Even peripheral. So it makes sense that Drake techs would be able to execute mods on incoming SAT 800 models, cleaning up production errors, and making improvements, all under the heading of 'refurbishment,' and 'bringing performance up to current production.'

Absent specifics, these terms are also meaningless.

And specifics, as always with this radio, are lacking. And yet, a few consistencies remain, one of which, by the admission of Lextronix' own people as reported in this group by more than one who have had contact with persons on the inside at Lex, the only change was the tuning shaft bearings, and another, that the so called 'Third Generation' was a marketing appellation that came from a e-Bay vendor.

In this light, arguments about SAT 800 fall, again, into the same class as the arguments this week over Bush, elections, Iraq and religion: A lot of passion and faith, while ignoring any position that's not our own.

You'd think, for the kind of money that's being spent here, there would be more critical thinking. And that the vacuum created by questions unanswered would not be so readily filled with marketing slogans and 'handling' remarks.

You'd think.

Events since the election reinforce the view that these people are
criminals. I won't ''get over it'' until these swine are behind bars
(or hanging by their thumbs in the public square).

''So Al Gore was the choice of Floridaï¿½s voters -- whether one counts
hanging chads or dimpled chads. That was the core finding of the eight
news organizations that conducted a review of disputed Florida
ballots. By any chad measure, Gore won.

Gore won even if one doesnï¿½t count the 15,000-25,000 votes that USA
Today estimated Gore lost because of illegally designed ï¿½butterfly
ballots,ï¿½ or the hundreds of predominantly African-American voters who
were falsely identified by the state as felons and turned away from
the polls.

Gore won even if thereï¿½s no adjustment for George W. Bushï¿½s windfall
of about 290 votes from improperly counted military absentee ballots
where lax standards were applied to Republican counties and strict
standards to Democratic ones, a violation of fairness reported earlier
by the Washington Post and the New York Times.

Put differently, George W. Bush was not the choice of Floridaï¿½s voters
anymore than he was the choice of the American people who cast a half
million more ballots for Gore than Bush nationwide. [For more details
on studies of the election, see Consortiumnews.com stories of May 12,
June 2 and July 16.]

The Spin

Yet, possibly for reasons of ï¿½patriotismï¿½ in this time of crisis, the
news organizations that financed the Florida ballot study structured
their stories on the ballot review to indicate that Bush was the
legitimate winner, with headlines such as ï¿½Florida Recounts Would Have
Favored Bushï¿½ [Washington Post, Nov. 12, 2001].

Post media critic Howard Kurtz took the spin one cycle further with a story headlined, ï¿½George W. Bush, Now More Than Ever,ï¿½ in which Kurtz ridiculed as ï¿½conspiracy theoristsï¿½ those who thought Gore had won.

ï¿½The conspiracy theorists have been out in force, convinced that the media were covering up the Florida election results to protect President Bush,ï¿½ Kurtz wrote. ï¿½That gets put to rest today, with the finding by eight news organizations that Bush would have beaten Gore under both of the recount plans being considered at the time.ï¿½

Kurtz also mocked those who believed that winning an election fairly, based on the will of the voters, was important in a democracy. ï¿½Now the question is: How many people still care about the election deadlock that last fall felt like the story of the century ï¿½ and now faintly echoes like some distant Civil War battle?ï¿½ he wrote.

In other words, the elite mediaï¿½s judgment is in: "Bush won, get over it." Only "Gore partisans" ï¿½ as both the Washington Post and the New York Times called critics of the official Florida election tallies ï¿½ would insist on looking at the fine print.

The Actual Findings

While that was the tone of coverage in these leading news outlets, itï¿½s still a bit jarring to go outside the articles and read the actual results of the statewide review of 175,010 disputed ballots.

ï¿½Full Review Favors Gore,ï¿½ the Washington Post said in a box on page 10, showing that under all standards applied to the ballots, Gore came out on top. The New York Times' graphic revealed the same outcome.

Earlier, less comprehensive ballot studies by the Miami Herald and USA Today had found that Bush and Gore split the four categories of disputed ballots depending on what standard was applied to assessing the ballots ï¿½ punched-through chads, hanging chads, etc. Bush won under two standards and Gore under two standards.

The new, fuller study found that Gore won regardless of which standard was applied and even when varying county judgments were factored in. Counting fully punched chads and limited marks on optical ballots, Gore won by 115 votes. With any dimple or optical mark, Gore won by 107 votes. With one corner of a chad detached or any optical mark, Gore won by 60 votes. Applying the standards set by each county, Gore won by 171 votes.

This core finding of Goreï¿½s Florida victory in the unofficial ballot recount might surprise many readers who skimmed only the headlines and the top paragraphs of the articles. The headlines and leads highlighted hypothetical, partial recounts that supposedly favored Bush.

Buried deeper in the stories or referenced in subheads was the fact that the new recount determined that Gore was the winner statewide, even ignoring the ï¿½butterfly ballotï¿½ and other irregularities that

cost him thousands of ballots.

The news organizations opted for the pro-Bush leads by focusing on two partial recounts that were proposed ï¿½ but not completed ï¿½ in the chaotic, often ugly environment of last November and December.

It proves that you have basic working knowledge of a very efficient form of communication that is used for emergency communications today and tomorrow. It runs circles around audio communication and can be much more effective. Under certain conditions, having the ability to copy morse can can mean the difference between like and death.

Here! Here! Using common sense in a post will have the John Smiths of the world chasing their tails. Then again, maybe thats not a half bad idea.... You could call it, autobrownnosing. :/ MK

devilfinder has some rather strange actions/behavior (java?)...

It attempts to place cookies, activex controls and such which I am not real comfortable with (this with IExplorer.) I have locked down such actions, and now it fails to function without long pauses (in which it attempts to do the actions stated.)

Since, I have abandoned using it, however, I do notice there is much less commercial sites to deal with when using it, and much more relevant material (to my thinking) is delivered. It doesn't seem that they are placing "paid for advertising" ahead of other material which is more popularly viewed...

Source record: 28895

Morse code is not used in communications of any consequence in the
western world.

B.S. Hams use it quite often. Who cares about emergency workers..
But saying that, I could care less if they do away with it or not.
It's not
that big a deal to me. But.....I still refuse to stand by and watch
people
that are totally ignorant of the subject spew their drivel. 5 wpm?
Hell, they might as well do away with it.... 5 wpm is nearly useless to

anyone in the real world. I can do 55-60 wpm on a good day.
I can do 30-40 wpm in my sleep. Sheesh. Code is simple to ones
who don't have a mental block, or some other kind of learning problem..
Even I use it less than I used to, but I'm damn glad I *do* know it.
It
can and will come in handy at one point or the other. I've personally
assisted in an marine emergency on the ham bands, with the coast
guard involved, and the boater had to switch to CW cuz his batteries
were too weak for fone. If I was a lazy dumbass like most of these
rabid
"non-coders", they might have well been shark bait later that day.
But being I was capable of handling the mode, all was groovy in the
world.
Testing for code is testing for code. Nothing more, nothing less.
If they drop code testing , fine with me. Just don't try to convince me
the
new op's are as capable of operators as the ones that do also know
code.
Cuz, they ain't. Case closed. They will always be slightly inferior as
operators. Notice, I didn't say *hams*.

ohhh, much more that that--it is logical!

CB can be much more fun!

Of course, there is a certain "lack of prestige" there I suppose.
CB'ers don't spy for the gov't, become secret agents, etc... <frown>
Nor do they hold delusions that they do, such as you find in amateur
radio with the drama-ridden-"I-am-special"-mentally-disturbed-element
you find there, usually under rocks, or belching, passing gass and rag
chewing their rants on the unwitting....

Yep, CB is pretty low key, and what-u-c is what-u-get....

5315. An NIST Mistake on "Atomic Clock"

Newsgroup: rec.radio.shortwave
Date: 2005-07-22 22:22:33 UTC
From: qquito <qquito@hotmail.com>
Message-ID: <1122070953.589461.108670@z14g2000cwz.googlegroups.com>
Source record: 28803

Hello, Everyone:

I bought an "atomic clock" in February, 2005, and it has since been working fine. I live on the eastern coast and now use EDT.

But then at about 2:00 PM, July 20, 2005, I noticed the clock display "SAT" while it was actually "WED". The Month, Date, Hour, Minute, and Second were all correct, though. Also, the logo of a radio wave tower was on, meaning the clock had received the NIST signal for the day. When I got home after midnight (It was now July 21), the clock displayed "THU" correctly.

Could it have been that NIST sent a wrong signal for the weekday on July 20, 2005?

I don't think the WWVB signal has that much information on it. I think only
the minutes and seconds information, because of the different time zones.

Long as my clocks are within about five minutes of the time frame,I couldn't care less.I am looking at my old antique Ansonia clock tick tockin on the wall right now and it is about five minutes slow.It has a right to be slow,that old 120 year old clock has a wobbled out worn out gear bearing hole on the back of the works.I wouldn't take anything in the World (UP You!,ebay!,Sideways!) for that big old wooden case clock.Besides,it lullabys me to sleep.

Nice radio,but too much money for the amount of bread.When I drove a bread truck for Sunbeam bakery a hundred years ago,we used to put Sunbeam sandwich bread in the Star foodstores and on the back ends of the loaves of bread,with a magic marker,we marked them all 2/39.(Two loaves of bread for thirty nine cents) Take a look at what one loaf of sandwich bread cost nowdays.Know why Little Miss Sunbeam can't get pregnant? No holes,Sunbeam bread is batter whipped,hence,No holes.

No, they can be set right just by getting sync'd up.

The time zone is merely an offset from UTC, which is what WWVB sends out.
You tell the clock what time zone you are in, and it adds the needed
offset to the data recovered from WWVB.

Do you have some kind of problem with anything of any quality or character?

Yes, the new stuff is small, light, etc.. and has lots of modes and such..
but it's almost uniformly garbage. And paying more money doesn't guarantee
anything.. look at the Satellit 800.

Back in the day, the cheap 'crap' of the day was so much better quality and
built to last many times longer than the best there is today.

"Progress" isn't always good.

Oh.

I thought it clear from my previous post, I have had one in
functioning order before, lots of hallicrafter rigs too...

An uncle living in the midwest had a few army surplus stores, years
ago. He had buildings full of that stuff--I used to go though it and
could have for the asking...

But here:
http://www.monteriallc.com/spectrum/receivers.htm
you will find radio technology to blow it away...

I am hearing that a favorite of terrorists is to remotely detonate their shi$ via a cell phone, now I am thinking thats another good reason to have a cell phone jammer, the first being you won't have to listen to other discuss their lifes next to you, and the other possibly making home with your body intact.

Now how much power output is the question?

I have done that and my SLINKY (vertical) drops off severely on
wavelength shorter than 40M...Study of SLINKY antenna resources indicate
it is resonant around 7.2 Mhz

Mr. Davies rises from the dead to advise us:
I am so glad that the code is going to be droped from the stupid ham licence reqirements. Now I can get on the liberty net and whatever else I want to and it will all be legel.

Aha ! ! ! You're alive and well. Thank you for checking in to let us know the rumors about your demise were bogus.

We can't wait till you check in to The Great Liberty Net. Maybe Kevin will be on the air for your first check-in. I'll advise Sir Sidney and Kind Jewish Indian and a few others to expect you very soon.

Maybe Tarzan and Doofus Jammer and Red Panty Man and Raincoat Charlie will help you with your first check-in, too.

Bro. Lawrence and Bro. Les and Y-Man and a few others will be ring-side with their sw radios tuned in for the big event, too. Y-Man will bring popcorn for everybody.

Nashville Joe will be delighted to hear the news - I can't wait to tell him.

Now stick around here - get your abuse from a much better class of people. Nimbusters doesn't do you justice.

I have no worries. It's made in China after all. It'll probably fall apart in a year, just after the warranty runs out.

That apparently is not the case. When I first put the battery in the clock after I bought it in February, all it displayed---Month, Date, Day, Hour, Minute, etc.---were wrong. I did not adjust anything and just left it that way. I wanted to see if everything would be signaled by the WWVB. Yes, it was what happened: EVERYTHING got correct automatically!

Techs can listen in on the HF bands and determine if they like it. If
so, then let that serve as the incentive toward upgrading their license.
The incentive licensing has worked well up until now..if you want more
privileges, you put in the study to gain the privileges. No need to have
techs given a piece of HF, but they can earn it with the upgrade.

Hams?

Some ancient grey-haired-geriatrics passing gass and ranting that the
world is changing in ways they never dreamed possible or like?

You obviously don't know me very well.

Someone whose best argument for CW is probably based on "historical
reasons?" You propose these peoples opinions are to be considered
legit and worth taking the time to consider?

I don't propose a thing. You have me confused with someone
who really gives a hoot. You think I could care less?
It's not going to have any effect on what I do. I can already
do it all, being an extra, and nothing is going to change.

Really, you believe the world considers these people of much
consequence? Do you even think the world ever considers them as they
tap their "hobby keys?"

Who gives a rats ass what the world thinks. They aren't hams.

Get a life, put down the opium pipe, welcome back to reality!

You are one to talk. You have your head stuck so far up your
ass it would take a cement chisel to pry it out. I see you blather
your silly crap all over many groups. You are the lazy flake, not me.
You have already admitted you are a problem child of sorts, and
has to see some kind of doktor. *You* need to get back to reality.
Usenet is not reality. Even if I were smoking an opium pipe, I
could still pass that silly slow 5 wpm code test. Am I gifted?
Am I special? No. I'm just not lazy, and sit around and whine about
it all day.

ROFLOL!!!!

Doing my best "Gunny Hartman" imitation....Jeeezzuusss H. Christ,
I think he's got a hard-on....

Honestly, I believe I said then (and I still believe it)
that Grove, Universal and Co. wouldn't have sold
the Sat 800 if it was a real turkey, and Lextronix
knew this. Therefore, Lextronix made certain that
the shipments that went there were better than
to other places. Why?? Who shops at Universal??
The people who are into the hobby, not the casual
guy who's just dabbling. To that latter guy, The
Sharper Image is a place to blow a wad of dough
with the impression that you're getting a quality
product, when the reality is that it's just a fancier
way of saying "I don't know what I'm doing, but
I'm making too much money to concern myself
with knowing what I bought."

sometime.

To be honest, I've never owned a Grundig/Lextronix
other than this one, so I have no point to compare
with other Grundigs. As for the other items, I will
concede all points. I suspect it comes more from a
jealous guarding of company secrets (this is Lextronix,
not Grundig, so the viewpoint is different) than from
a screw thy neighbor approach.

this
> product.

I do not think it an accident that they got it to Magne
the way they did. If they were putting Passports into
some of the boxes for shipments, it would behoove
Lextronix to have a review of the Sat 800 in the best
possible light in the Passport inside the box. Dishonest??
No. Trying to maximize exposure?? Yes. Doing it in
a less than aboveboard manner?? Yes.

As for Radio Nederland, that doesn't surprise me much.
The Sat 800 was designed for the American market,
and the marketing geniuses at Lextronix probably figured
that it wasn't a high priority to get a sample out to a
"foreign" reviewer. Last I checked, though, Tom was
still located in the U.S. I've seen how marketers think,
and getting a lot of them to think outside of the narrow
viewpoint that they have and accept a wider scope
is an exercise in deprogramming.

> But definitive information is still missing. That's not true of any
> other product mentioned here.

When I spoke to the service manager at Drake, he
told me that eton/Lextronix had bought the Drake
design for the SW8, and tweaked it themselves
for use in the Sat 800. A nice little side effect of this
is that you get to put your name on the box, and
don't have to reference Drake's name.

> quality.

Like I said then, I can say that I know I didn't get
a turkey. That doesn't invalidate all those other
people who did, but that also doesn't mean that
the people (like me) who didn't aren't idiots, either.
I honestly have not kept track of the quality of the
runs after I dropped out of the hobby for a couple
of years in the early 2000's, so I also can't say if
Lextronix has ever solved their production issues.

All I can say is that it is a good portatop if you get
a good production model. At the time, if you
couldn't plunk down the kilobuck for a good
tabletop, the Sat 800 was a decent alternative.
I know that the Sat 800 isn't the Second
Coming, and I know that the Sat 800 has had a
checkered past mainly based on the fact that
to keep costs down they rolled the dice and went
overseas to China for production.

> Yes, I remember the arguments. I remember them well. Amused by

our own.

Ha. That's like telling people on r.r.s. to stop responding
to political postings. At least it was on topic back then.

> As someone said at the beginning, it's real clear that Marketing

> advertising.

This is what a lot of companies want to evolve into:
a marketing and "core business" company. Sell off
assets that aren't part of the "core business" (whatever
the hell that means) and concentrate on what you
do best. Thing is, when you sell off things like
factories, you're at the mercy of a contractor to provide
the quality people have come to expect from you.
Think of the upsides to this that IBM is pitching
to their customers: let us handle your HR or your
IT or your payroll or your accounting, and you can
go and do the "big things". The problem is, IBM
has a different set of goals to make a profit, and that
may or may not intersect with your own.

Unfortunately, I see more of this in the future, rather
than less.

> Now specifically: the external power supply change is not a

the
> radio, as much as it's an accessory. They changed to a different
> model/vendor for the external power supply. And it was made
available to
> any purchaser. That's not a production change to the radio.

Technically, you are right, but it was a change to
the end packaging. And that was done within
several months of the initial release of the Sat 800,
which means that it was done because they sucked
and the consumers let them know about it.

> There have been reported that some of the Drake refurbished

production.'

As I mentioned above, I was told that Lextronix bought
the design and then tweaked it. The extent of the tweaking
was something I didn't follow up on, but he did mention
that he knew that the audio was tweaked a bit.

> Absent specifics, these terms are also meaningless.

Ugh. I should have probably mentioned that my reference
above was a quote from RHF. I'm gonna have my head
dragged in the mud for that for a while, I suppose.

> In this light, arguments about SAT 800 fall, again, into the same

Ha. I'm older and wiser than when I was back then,
and I know that a good slogan and damage control
can hide many defects and deflect energy away from
what really matters. As does enough yelling and
screaming. Unfortunately.

B. Otten:

I don't think anyone is going to "listen in and like it", right now anyway.

Rather, let the techs listen in and come up with new ideas on how they can change it and breath some new life in it... if need be, perhaps some Chicken Banders can grab a license and add some help... then implement them with a purpose...

No one likes change but a baby with a wet diaper--get ready baby... <grin>

Well son, perhaps some of those Chicken Banders have degrees in a
mental heath field... perhaps they can offer counseling and make the
transition easier...

Let's not jump to any conclusions until they get here...

I served seven years in uniform, just turned 56, and would serve again if the services would have me. Problem is, as a disabled veteran (service-connected) I couldn't meet the physical requirements regardless of my age.

The above doesn't mean that I want to make war, seek adventure, enjoy wearing uniforms or crave MREs. It does mean that I recognize the reality of the situation -- we are fighting a new kind of enemy who wants all Americans dead, and I'd rather engage them in Iraq or Afghanistan than make it easy for them to bring their kind of warfare to my neighborhood. Besides, as an old fart I have less to lose than some young guy or gal with their entire life ahead of them.

The Wahabists who follow bin Laden and other radical Islamic terrorist bosses don't care if you want to be their friend. They don't care if you think the entire Western world should get out of the Middle East. They don't care if you hate Bush, Blair and all their supporters and allies. If you aren't one of them, they want you DEAD! And even if you are one of them, they're willing to kill you if they can kill an "infidel" in the process. They are the ones who have chosen to kill or be killed; I just prefer that they die instead of us.

Wahabists and their useful idiots are welcome to flame away. And I'm sure a few will -- all the while denying that they are either Wahabists or idiots, of course.

If you read what I posted back then, I did say precisely that. The point, however, is that there was clearly a double tiered QC specification. That alone speaks volumes about what was really driving this train. And the true nature of the product. While serious outlets got hand selected or hand tweaked rigs, general production went to SA, and their like and kind. With one SA outlet reporting almost 100% returns, tipping the real story about SAT 800. No other product in it's class has received such hand selected product distribution. Certainly not R-75. One is as good as another in that line. Seems not to be the case with SAT 800 and THAT tells the bigger story.

Don't make the mistakee that Lextronix products are Grundig products.
Lextronix was only a distributor for Grundig, and bought the right to
the name. Lextronix products are produced without involvement of Grundig
in anyway. And in the case of SAT 800, Grundig AG didn't even
acknowledge it's existence.

I've owned and still own a number of products from Grundig AG. They
Lextronix products bearing the Grundig name don't even come close.

And the issue is not so much 'screw thy neighbor' as much as a
marketing department run amuk. Lextronix is a marketing company. They
have no product with their name on it, so they have no brand to protect.
They have no manufacturing division, so they have little influence over
QC, or, quite frankly, any motivation to have it. They only worry about
the marketing. Any hits taken by the brand are not their concern.

Actually, Dishonest YES. If you're bringing to market a product and
promoting it in less than above board ways, that IS dishonest.

Microsoft and ATT were busted for precisely the kind of deception
displayed by Lextronix, here.

>
> As for Radio Nederland, that doesn't surprise me much.

That argument doesn't holdd water. Lextronix promised radios to RN
for the Media Network evaluation. Promised repeatedly. To the degree
that RN even went on the air with a teaser that an evaluation would be
coming shortly based on the expected, promised arrival of the radio from
Lextronix. With each missed evaluation, Media Network again promised a
full review based on receivers delivered from Lextronix. But Lextronix
never delivered. Instead superserving the one reviewer who had already
endorsed the radio as, 'the best shortwave receiver in the world,'
before the first prototype was built. Also something less than honest.

> don't have to reference Drake's name.
>

You missed the point. Whether the design of SW-8 was actually bought
is also something of a mystery. Drake was discontinuing the product,
claiming that key components were no longer available. Lex/Tecs would
be buying a product design that would no longer be manufacturable. The
circuitry would have bo be modified. In fact, Tecsun has more than
enough experience to do this, and as I said, the only thing they would
really need is the IF strip, or more specifically, the sync circuitry.
But, there, again, is more mystery. A service manager tells you that
Lex/Tecs buys the SW-8 design, an engineer at Drake tells another member

of this group that they only bought the sync, another tells me that the total involvement of Drake in the SAT 800 project came down to two phone calls and a couple of faxes. More questions than mysteries. But the real point is that while Drake is touted as the architect of this rig by everyone and anyone who has an opinion, nowhere is Drake mentioned in any official literature. If the Drake involvement is such a matter, no marketing department would let that go unmentioned. Especially when everything else about the marketing of the product has been so much of a runaway train. Unusual and highly singular restraint. Which raises, again, more questions about the true nature of the product.

First of all, no one has suggested you were an idiot, so that's a bit more defensive than the situation calls for. And secondly, you have been more fair here than many have been about his radio, and I respect that. But thirdly, and this is the point I've apparently not been very good att presenting...for the newcomer to the hobby, or for the unknowing, the level of hype and the marketing noise does more harm than good. If the hobby is to survive, it need the knowledgable and the experienced. Each with a decent sense of history. This single product and the religion that's been built around it have done an enormous disservice to those who have not been fully informed, just as it's done an enormous disservice to Grundig, and to Drake through it's more than deceptive marketing strategies.

Everyone here has read the frequent complaints if not diatribes against our favorite eBay scamster, ...whatever he calls himself today...offering products are far above going prices, with elaborate hyperbole in his listing copy, even offering factory warranties for products for which he is not an authorized retailer. And the complaints have been quite shrill. And yet, Lextronix has been just as deceptive, without a peep out of the same people. Why the double standard? Deceptive marketing is deceptive marketing.

Very likely. But by acceeding to it as inevitable, we make it
inevitable. It may be an uphill battle to make sure the facts are
clearly heard, but it's a battle that must be fought.

That was clear. More powerful audio, to be sure. But you see,
aggain, there are no specifics about what was actually done. It's
entirely possible that the audio is all the changes there are.

I have an SW-8. In fact, I bought it from a member of this group. The
audio is much different than that of SAT 800. But from my experience
with both radios, actual performance, on the same antenna goes to the

Drake. That doesn't speak very well of Lex/Tecs
design/adaption/production.

It's not a new kind of enemy.

It's the Vietnam war all over again, only you don't know what country the
enemy is in.

It's like the "war on drugs," and so far just as successfull. There are more
terrorists and more terrorism now than when we started this "war."

Let's just hope all those muslims are not the radical type...

If we have to start dragging out those megaton nukes there is going to be one heck of a mess to clean up. Could even destroy someone's home, or country!

Maybe a biological weapon which was only fatal to people of middle eastern decent would be better?

Koestler's Sunbeam Bakery that used to be in Vicksburg,Mississippi.There was trucks that brought the bread and cake products to the relay store on JR Lynch Street in Jackson early,early in the morning.I drove a Sunbeam bread delivery truck on my bread route in the Jackson metro area from 1966 to 1971.The cake products were made at Wolf's bakery in Hattiesburg,Mississippi.The old Sunbeam bakery in Vicksburg closd down years ago.I don't know if Wolf's is still in operation nowdays or not.An old saying goes,Don't say Bread,say Sunbeam.

Only if we have to, look at the nukes we had to use in Japan.

If put to the way and attacks become frequent and it gets dangerous
here, who knows, I don't see us letting them run this country or even
england before there is hell to pay.

If that was the case, I'd think the war would be useful. But it really
isn't. There's a large world of Muslims and there's plenty that will fight
there and bomb here. I think you need the good Muslims to pressure their
own bad seeds. Make them realize that their intentions and actions are
wrong. And we need to develop the technology here to do bomb detedtion,
radiatio detection, etc. We may not know how to fight a worl enemy, but we
can certainly use our minds to develop better defenses.

Not to be political, but that's similar to Bush's rant afew years ago: You
are either with us or against us. I noticed that rehtoric didn't last long

But, that Muslim rehtoric of hating the west has little to do with religion,
but appeals to the extremists who see hate as the only means to live.

And even if you

Check this link:
<http://tf.nist.gov/stations/wwvbtimecode.htm>
The chart shows the timecode includes:
S, M, D, Y, UT correction, and, LY data.
The logic in the device must reduce the raw data to
month, day etc.

I once wrote a computer program to do this.
For me it was a "non trivial task", but I am not
much of a programer.

Terry

Well, Come On All Of You, Big Strong Men,
Georgie and Exxon Needs Your Help Again.
He's Got Himself In A Terrible Jam
Way Down Yonder In Iraq and mabey Iran (?)
So Put Down Your IPOD And Pick Up A Gun,
We're Gonna Have A Whole Lotta Fun.

And It's One, Two, Three,
What Are We Fighting For ? (Big Oil)
Don't Ask Me, I Don't Give A Damn,
Next Stop Is Baghdad Land
And It's Five, Six, Seven,
Open Up The Pearly Gates,
Well There Ain't No Time To Wonder Why,
Whoopee! We're All Gonna Die.

Come On Wall Street, Don't Be Slow,
Why Man, This Is War Au-Go-Go
There's Plenty Good Money To Be Made
By Supplying Halliburton With The Tools Of Its Trade,
But Just Hope And Pray That If They Drop The Bomb,
They Drop It On All of ISLAM! Wheeee!!!!!!

And It's One, Two, Three,
What Are We Fighting For ?
Don't Ask Me, I Don't Give A Damn,
Johnnie's Gonna See the Talliban
And It's Five, Six, Seven,
Open Up The Self-Serve Lanes
Well There Ain't No Time To Wonder Why
Whoopee! Premium UnLeaded is SKY HIGH!

Well, Come On Generals, Let's Move Fast;
Your Big Chance Has Come At Last.
Now You Can Go Out And Get Those Towelheads
'Cause The Only Good Islamic Is The One That's Dead
And You Know That Peace Can Only Be Won
When We've Blown Mecca To Kingdom Come.

And It's One, Two, Three,
What Are We Fighting For ?

Don't Ask Me, I Don't Give A Damn,
Next Stop Is Teheran
And It's Five, Six, Seven,
Open Up The Pearly Gates,
Well There Ain't No Time for Introversion
Momma Needs To Fill Up that Chevy Surburban!

Come On Mothers Throughout The Land,
Pack Your Boys Off To me the Talliban
Come On Fathers, And Don't Hesitate
To Send Your Sons Off Before Texaco says That It's Too Late.
And You Can Be The First Ones On Your Block
To Have Your Boy Come Home In A Box.

And It's One, Two, Three
What Are We Fighting For ?
Don't Ask Me, I Don't Give A Damn,
Next Stop Is North Iran
And It's Five, Six, Seven,
Open Up Islamics Gates,
Well There Ain't No Time To Wonder Why,
Whoopee! Usama says We're All Gonna Die.

-=jd=-:

My gawd man, you are a genius!

I can see it now, a army, navy and airforce completely composed of gays.

The battlefield is the scene of one GIANT ORGY and ends up covered in body secretions and sex toys, everyone comes away from it loving each other--war is finally non-existent in the new perverted society!!!

Now that is thinking "outside the box!"

John

Not only am I for real, if our military leaders are not on this same wavelength and have prepared well for counterstrikes and quick response--I want them gone and replace with men who do...

If we started all this just to back down in the face of great adversity it would be sheer insanity.

Either we have the cajones to take this to the wall, or we don't, judging from our actions in afghanistan and iraq--we do...

jd:

A bit of deja vu here, one is reminded of the crusades where
christians seized the course of "the world" from the muslims and
substituted a more humane system...

John

Stop with the testosterone and think.

Since 911, we have MORE TERRORISM and MORE TERRORIST.

Why?

See:
<http://www.hard-core-dx.com/nordicdx/antenna/feed/feed1.html>
and
<http://www.webex.net/~skywaves/ANTENNA/antsys.htm#4:1%20Balun>
and
<http://members.aol.com/WA1ION/nrants.pdf>
the last one uses a MiniCircuits 9:1 tranformer that caosts about ~$5.
It has been several years since I bought one.

John Doty is very correct about the advantage of "TV" mathcing
cores over the more common 1" feritte cores. Pluse the TV cores
are cheap and still fairly pentifull.

Terry

Roger:

Well duh! For decades we have sat on our duff hoping the problem
would "just go away."

It didn't. Now it is time to "take out the garbage."

As Americans we are slow to anger and act, Teddy R. said it best with,
"Walk softly and carry a big stick."

STICK TIME IS HERE!!!!

John

Roger:

Hey, just thinking, you sound perfect for the job, you ever consider
going to Iran?

Maybe do some humanitarian diplomatic work with the radical muslims
there? We would appreciate it here if you could work out things
there--for starters just get 'em to play well with the other
children...

John

5431. 11 separate acts of treason committed by the White House

Newsgroup: rec.radio.shortwave
Date: 2005-07-23 13:42:13 UTC
From: David <rickets@knac.com>
Message-ID: <n8i4e1tejbjem63eukag6ou1eopp2oaguk@4ax.com>
Source record: 29119

The Disclosures of Valerie Wilson's Identity

1. The Disclosure by Karl Rove to Columnist Robert Novak
In a column dated July 14, 2003, Robert Novak first reported that Valerie Plame Wilson was "an agency operative on weapons of mass destruction."1 Mr. Novak cited "two senior administration officials" as his sources.2 According to multiple news reports, one of these two sources was Karl Rove, the Deputy White House Chief of Staff and the President's top political advisor.3 During a phone call on July 8, 2003, Mr. Rove confirmed for Mr. Novak that Ms. Wilson worked at the CIA. During this conversation, Mr. Novak referred to Ms. Wilson "by her maiden name, Valerie Plame," and said he had heard she was involved in "the circumstances in which her husband ï¿½ traveled to Africa."4 Mr. Rove responded, "I heard that, too."5 Mr. Novak's name also appeared "on a White House call log as having telephoned Mr. Rove in the week before the publication of the July 2003 column."6

2. The Disclosure by a "Senior Administration Official" to Columnist Robert Novak
In addition to his communications with Mr. Rove, Mr. Novak learned about Ms. Wilson's identity through communications with a second "senior administration official."7 Mr. Novak's second source has not yet been publicly identified. Mr. Novak has stated, however, that the source provided him with Ms. Wilson's identity. As he stated: "I didn't dig it out, it was given to me."8 He added: "They thought it was significant, they gave me the name and I used it."9

3. The Disclosure by Karl Rove to TIME Reporter Matt Cooper
During a phone call on July 11, 2003, Mr. Rove revealed to TIME reporter Matt Cooper that Ms. Wilson worked at the CIA on weapons of mass destruction.10 Mr. Cooper reported that this "was the first time I had heard anything about Wilson's wife."11 Mr. Rove provided this information on "deep background," said that "things would be declassified soon," and stated, "I've already said too much."12

4. The Disclosure by Scooter Libby to TIME Reporter Matt Cooper
During a phone call on July 12, 2003, TIME reporter Matt Cooper asked the Vice President's chief of staff, I. Lewis "Scooter" Libby "if he had heard anything about Wilson's wife sending her husband to Niger." 13 Mr. Libby replied, "Yeah, I've heard that too," or words to that effect.14 Mr. Libby provided this information "on background."15

5. The Disclosure by an "Administration Official" to Washington Post Reporter Walter Pincus
On July 12, 2003, an "administration official" told Washington Post reporter Walter Pincus that "Wilson's trip to Niger was set up as a

boondoggle by his CIA-employed wife."16 Mr. Pincus has not publicly identified his source, but has stated that it "was not Libby."17

6. The Disclosure by a "Top White House Official" to an Unidentified Reporter
In addition making disclosures to Mr. Novak, Mr. Cooper, and Mr. Pincus, White House officials may have had conversations about Ms. Wilson with three other reporters about Ms. Wilson's identity. According to the Washington Post, a "senior administration official" confirmed that "before Novak's column ran on July 14, 2003, two top White House officials called at least six Washington journalists and disclosed the identity and occupation of Wilson's wife."18 According to this official, "Clearly, it was meant purely and simply for revenge."19 Press reports suggest that one of these unidentified reporters may be NBC correspondent Andrea Mitchell.20

7. The Disclosure by a "Top White House Official" to an Unidentified Reporter
In addition making disclosures to Mr. Novak, Mr. Cooper, and Mr. Pincus, White House officials may have had conversations about Ms. Wilson with three other reporters about Ms. Wilson's identity. According to the Washington Post, a "senior administration official" confirmed that "before Novak's column ran on July 14, 2003, two top White House officials called at least six Washington journalists and disclosed the identity and occupation of Wilson's wife."21 According to this official, "Clearly, it was meant purely and simply for revenge."22 Press reports suggest that one of these unidentified reporters may be NBC Meet the Press host Tim Russert.23

8. The Disclosure by a "Top White House Official" to an Unidentified Reporter
In addition making disclosures to Mr. Novak, Mr. Cooper, and Mr. Pincus, White House officials may have had conversations about Ms. Wilson with three other reporters about Ms. Wilson's identity. According to the Washington Post, a "senior administration official" confirmed that "before Novak's column ran on July 14, 2003, two top White House officials called at least six Washington journalists and disclosed the identity and occupation of Wilson's wife."24 According to this official, "Clearly, it was meant purely and simply for revenge."25 Press reports suggest that one of these unidentified reporters may be MSNBC Hardball host Chris Matthews.26

9. The Disclosure by an Unidentified Source to Wall Street Journal Reporter David Cloud
On October 17, 2003, Wall Street Journal reporter David Cloud reported that an internal State Department memo prepared by U.S. intelligence personnel "details a meeting in early 2002 where CIA officer Valerie Plame and other intelligence officials gathered to brainstorm about how to verify reports that Iraq had sought uranium yellowcake from Niger."27 This "classified" document had "limited circulation," according to "two people familiar with the memo."28

10. The Disclosure by an Unidentified Source to James Guckert of Talon News

On October 28, 2003, Talon News posted on its website an interview with Ambassador Joseph Wilson in which the questioner asked: "An internal government memo prepared by U.S. intelligence personnel details a meeting in early 2002 where your wife, a member of the agency or clandestine service working on Iraqi weapons issues, suggested that you could be sent to investigate the reports. Do you dispute that?"29 Talon News is tied to a group called GOP USA30 and is operated by Texas Republican Robert Eberle.31 Its only reporter, James Guckert (also known as Jeff Gannon), resigned when it was revealed that he gained access to the White House using a false name after his press credentials were rejected by House and Senate press galleries.32 In a March 2004 interview with his own news service, Mr. Guckert stated that the classified document was "easily accessible."33 In a February 11, 2005, interview with Wolf Blitzer of CNN, Mr. Guckert said the FBI interviewed him about "how I knew or received a copy of a confidential CIA memo," but he refused to answer FBI questions because of his status as a "journalist."34 A week later, Mr. Guckert changed his account, claiming he "was given no special information by the White House or by anybody else."35

11. The Disclosure by a "Senior Administration Official" to Washington Post Reporters Mike Allen and Dana Milbank

On December 26, 2003, Washington Post reporters Mike Allen and Dana Milbank reported on details about the classified State Department memo, writing that it was authored by "a State Department official who works for its Bureau of Intelligence and Research."36 The Post story was attributed to "a senior administration official who has seen" the memo.37 The Post also reported that the CIA was "angry about the circulation of a still-classified document to conservative news outlets" and that the CIA "believes that people in the administration continue to release classified information to damage the figures at the center of the controversy, former ambassador Joseph C. Wilson IV and his wife, Valerie Plame."38

Try reorienting the loop -- it may be that it isn't pointing at the station you want, so you are peaking on background noise. On a weak signal, the position can be very critical. Also on most loops there can be a substantial dip in signal strength if it is tuned somewhat off the peak.

I'm sure that the loop is working fine.

That's what Xcelite calls them (part Number 99-66). My Army repair
manual repeatedly refers to them as ''Bristo'' however.

I just love it too...you're soooo consistent and, dare I say it, sooo
predictable. Never answer the questions. Never address the issues. Just
resort to your usual, perpetual, time and again childish name calling.
You dodge the issues so often it might lead some to wonder if you have
the mental horsepower to actually respond in an adult manner. ;-)

Hmmm, interesting:

Anyone ever keep tally of the number of dead fetuses in the dumpsters
behind abortion clinics? Partial-birth abortions?

How does the number compare to the number of troops we have lost?

I think we just have a problem of perspective here...

We'll be seeing banners like, "109th Alzheimer's Unit" at training
facilities.

How about "Special Cannon Fodder Regiment"? or "Seventh Body Bag
Division"? How about "Freeze-Dried Decoy Units"? The possibilities are
staggering.

Laugh as you will. These people have committed an unprecedented act
of wreckless disregard for an ongoing intelligence operation,
endangering national security and putting dozens of human assetts in
danger.

While you ignore this, and choose to instead engage in juvenile name
calling, we are all put in deeper peril by those we entrusted to make
things better.

By historical standards, the Sat 800 isn't so expensive. Back in the 50s, a mid-level receiver would run around $100 to $150. I'm sure it takes fewer hours of work to afford a good performing radio today.

>
> Back in the day, the cheap 'crap' of the day was so much better quality
and
> built to last many times longer than the best there is today.

Quality as defined how? Selectivity and sensitivity have never been less expensive. The old radios needed repairs and I'm sure we both have replaced plenty of leaky paper caps, drifted carbon comp resistors and tubes. Yes, the old radios were more repairable. They were made mostly with standard parts and built by hand.

>
> "Progress" isn't always good.
>
>

Imagine you could go back fifty years and had hundreds of thousands of modern radios to sell, all at inflation corrected prices. Who would be interested in the then current radios? Well, I suppose they'd be even more interested in how you and all those radios got there. But that subject is more on-topic in rec.time.machine.

That's simply not true, but if you must believe it, then it clearly is
YOUR truth. There are many who believe as you do, but perhaps in
dwindling numbers. There will always be those whose emotions resonate
with any particular sales pitch. You bought the pitch, drank the
kool-aid, or whatever you want to call it.

> , and I'd rather engage them in Iraq or

> The Wahabists who follow bin Laden and other radical Islamic terrorist
> bosses don't care if you want to be their friend.

The Wahabists (if that's what you call them) own around 20% of all US
real estate. The "communist" Chinese are buying US bonds like they're
ladyfinger firecrackers. You're fighting the wrong battle against the
wrong people. Bush wants you to think that terrorists are the problem.
Go for it. No one can convince you otherwise. Since you're disabled and
too old to serve, you can spend your time convincing your nephews and
nieces that serving overseas will bring pride, dignity, VA medical
benefits, and Depleted Uranium to their lives. Make sure you spend a
few reality-based minutes to tell them about Depleted Uranium. Tell
them about the increasing, long term casualties of the first Gulf War.
Tell them about the offspring of vets who served then. That'll tip the
scales of persuasion your way.

5463. CCP Uses Internet to Spread its Ideas

Newsgroup: rec.radio.shortwave
Date: 2005-07-23 14:57:43 UTC
From: SeeingEyeDog <look@u.org>
Message-ID: <11e4mplde5tr5f0@corp.supernews.com>
Source record: 28951

...
Often the Chinese government and Western governments tango in harmony to mislead people that they are working on and making progress in improving human rights in China. The hostage diplomacy and human rights dialogues is nothing but a show in the eyes of people who are suffering and getting no real support.

The CCP is also very good at turning every opportunity into favorable propaganda for itself. Attending a Sunday worship in a state run Church in Beijing, Secretary Rice was trying to show to Chinese, (unfortunately Chinese could not see the show) how much she cares about religious freedom, and the CCP capitalized on this opportunity to show the world the China does have religious freedom.
...
When I saw that former Chinese president Jiang Zemin, was received as an honorary guest in President Bush's Texas ranch, I entertained the idea that the guest could have been Saddam, if he was as powerful and evil as Jiang. [President Hu Jintao will make his first visit to the United States as Chinese leader in September.]

Third, the communist propaganda penetrating the Western world, was made possible through its deals with Western media tycoons that want to do business with China. That allows the Chinese government- made programs to be shown freely in the US, but only entertainment programs to be shown in China.

China has successfully sold the idea to the Western world that China has changed, and that it is no longer a communist regime, but an evolving western type capitalistic super power. We like the freedom of the press in the West, and Chinese communist leaders enjoy it even more.

Deng Xiaoping's strategy of developing China in disguise is working. Now, not only the majority of Chinese, but many Western politicians and people, have been sold the idea that China and the world would be better off with the communists ruling China.

It has been proven that the theory of transforming China by engaging it, became in practice the Western world being transformed by China instead.

...it is my observation that CCP leaders love United States and Western countries, they sent their children to the West and money too. They are eager to invite Western leaders and their associates to visit China so they can show them what they want them to see, and it works even better if they allow China to cover their travel expenses. It is not uncommon to see how a politician in the US, changes his position on China issues, after being a guest of the Chinese government.

Worst of all, the CCP also uses the Internet to spread its ideas, sometimes in the name of a third party, giving Chinese people a false sense of information freedom.
...
...the US has a choice to make today choosing to take sides with the Chinese communist regime, or with the Chinese people. To continue engaging and cultivating the communist regime will lead to the development of the worst foe that the US has to deal with.

CCP's Flagrant Disregard for Human Life

As a professor and the director over China's National Defense University Defense Strategic Institute and a general in the People's Liberation Army, Maj. Gen. Zhu Chenghu said at a briefing to foreign reporters that China would resort to nuclear force should the U.S. intercede in a Taiwan Straits conflict. He added that China was prepared to sacrifice the cities east of Xi'an (implying six major cities with 33 million people) and warned that the U.S. "will have to be prepared for hundreds of cities that will be destroyed."
In a letter addressed to Zhou Wenzhong, the Chinese ambassador to the U.S., Republican Congressman Tom Tancredo criticized Zhu for making such comments. "For a senior government official to exhibit such tremendous stupidity by making such a brazen threat is hardly characteristic of a modern nation," the letter said.

Zhu subsequently claimed that he was merely expressing his personal views. However, his comments signaled a threat to the U.S., Taiwan, and above all, the Chinese people. If we look back in history, Zhu's comments are representative of the tyrant Mao Zedong.

One cannot help but wonder, why the CCP after all these years continues to walk in Mao's footsteps, failing to show any regard for human life. What could be more important than human life? If nuclear war breaks out, how many innocent lives in the U.S. and China would be lost?

Of course, history has shown us that the CCP is not afraid of sacrificing human lives. During the second session of the 8th National People's Congress in May 1958, Mao said that sacrificing lives in the event of a nuclear war, in exchange for eliminating capitalism, would not be such a bad thing after all.

Historically, under CCP rule, China's casualty rate during peacetime was comparable to that of wartime. During the Great Leap Forward, 30 million Chinese were starved to death, yet Mao showed no remorse. The deaths of millions as a result of the Cultural Revolution and many other political campaigns reflected Mao's inhumanity.

The use of tanks against its own people on June 4, 1989, was an unprecedented atrocity in the CCP's history, further revealing its flagrant disregard for human life. Deng Xiaoping once said: "Kill 200,000 in exchange for 20 years of stability."

Seen in this light, Zhu's views are not surprising. Those supporting the CCP's despotic rule would show no regard for the lives of their own people. Consider the coal mine disasters, the starvation of farmers that sacrificed

their lives for the land, the flood in Heilongjiang, which took the lives of hundreds of elementary school children, the cover-up of the SARS crisis, and the death of college student, Sun Zhigang, due to police brutality.

http://english.epochtimes.com/news/5-7-22/30495.html

A CCP General With a ?Personal Opinion?

China?s General Zhu Chenghu raised international concern when he threatened nuclear action against the United States. China?s response was to state that the threat represents Zhu Chenghu?s ?personal opinion? and not that of China. Beijing would neither condemn nor officially refute General Zhu?s statement in spite of protests from the U.S.
Zhu Chenghu is surely being celebrated for his words throughout the Chinese Communist Party?s army. Should the U.S. government be surprised?

Surely the U.S. didn?t think that the Chinese government would risk destruction to start a war with the U.S. The Chinese cannot beat the U.S. in conventional warfare, but if there were an attack against Chinese warships in a possible war over Taiwan, the Chinese government would use their nuclear weapons directly against the U.S.

The Chinese government doesn?t want to hide behind North Korea?s aspiration for nuclear power anymore. Instead, they want to make their own aggressive nuclear status clear. Therefore, Beijing let one of its own generals give the U.S. a direct warning.

The Chinese government has called it a personal opinion. If the common people of China aren?t allowed to have their own personal opinions, how can a general be allowed to have personal opinions regarding major international relations?

This was a belligerent move by the CCP. We have to believe that the CCP will most certainly do what they say they might do. The CCP considers the Chinese people worthless, not to mention Americans. If something offends the Communist Party, they will dare to do anything.

Peace loving people of China, people of the world, be aware.

5465. The Rebirth of Iraq and a Warning to London

Newsgroup: rec.radio.shortwave
Date: 2005-07-23 15:00:15 UTC
From: SeeingEyeDog <look@u.org>
Message-ID: <11e4muclq4i1oa5@corp.supernews.com>
Source record: 28953

...
Komane (AsiaNews) • For the western media, Iraq is a destroyed country; for Mgr Rabban al Qas, bishop of Amadiyah and Arbil, the country is undergoing a revival: •Certainly there are attacks,• he said in an interview with AsiaNews, •but daily life goes on. The Iraqi people continue to live, they are not afraid•. The bishop said •order, discipline, transport, displacements, and work• have improved in Iraq, •there is a change for the better compared to one or two years ago•. To confirm this, he speaks of • among other things • celebrations which take place in Iraq for children•s first Holy Communion.

Mgr Rabban dismissed fears of a possible Islamic twist in the constitution (•among Shi•ites, Christians and Sunnis themselves, there are lay figures who are pushing in the opposite direction•) and he stood firm in his accusation that fundamentalists responsible for attacks come from abroad: •Some days ago, 1,300 terrorists were arrested on the Syrian front. Guarding the border must become a resolve for all countries bordering Iraq.•

As for Great Britain, stricken by terrorism, the bishop expressed much compassion. At the same time, Mgr Rabban stressed: •[The British] extended too much hospitality to fundamentalists and now they have many who eat, drink, and publicize their war and violence• a distinction must be made between freedom of expression, respect for human rights and hospitality extended to criminals.•
...
We have been able to foresee the danger. In the name of human rights, they gave shelter to assassins. Why should London welcome a person who has been rejected by his country because he has killed? There must be a distinction between respect for human rights and hospitality extended to criminals.

We cannot extend hospitality to people who preach war, criticize Iraq, applaud beheadings, sow hatred• and with all this, such people are allowed to talk on television and in newspapers.

You're one forward-thinking individual. I read a report from yesterday
which stated that Cheney has ordered the military to prepare for
attacking Iran, and to prepare to use nuclear warheads to penetrate
deep underground facilities. As you might expect, the order leaked to
the press because some military leaders are very unhappy with this
decision.

http://www.dailykos.com/storyonly/2005/7/22/164841/163

Of course, nukes are not something that you "clean up". There's no
cleaning up of nuclear fallout that has a half-life of hundreds of
thousands of years, as does plutonium.

If nuclear weapons are used overseas, retaliation will come here.
Guaranteed. A decision to use nukes will always be suicidal.

> Could even destroy someone's home,
> or country!

Maybe this is a bigoted, racist idea that Hitler would have cherished.

How do you detemine "middle-eastern descent"? Three quarters descent?
Half descent? One thirty-second descent? What if you marry a woman
whose grandfather was part Lebanese? Do your wife and children qualify
for dying from a targeted biological weapon? Ooops! Don't want to go
there, do you?

Maybe some of your best friends are of middle eastern descent, John,
and you don't know it.

You're asking this racist to think? He has no idea what nuclear weapons
do. He's thinking in a vacuum. He may need to visit a VA hospital to
look at what microscopic DU particles do to vets who've come back from
Iraq, just for starters. And that's "depleted" uranium, not the
full-blown stuff that's released in bombs.

My God. The stupidity...

EK:

... what nuclear weapons do?

I was under the impression, that just after the initial blast, a super heated fireball was formed of temps in excess of 10,000,000 degrees C (think "surface of the sun temperature.") And, that complete vaporization of people, cars, buildings, metal and stones would occur for miles (from a BIG ONE, smaller nukes would produce less of an effect.)

Am I mistaken? Have we spent billions, trillions even, and gotten shafted? You mean that weapon will not perform as stated?

John

EK:

Think "collateral damage", it is unavoidable.

Hey, the long life of the spent nuclear by-products produced by the
blast are only a secondary benefit--still, that should be long enough
to stop the enemy from re-establishing themselves in the territory in
question. Indeed, it is very unlikely we will ever have to return to
that area, in question, ever again with weapons, such as was required
in Iraq...

I think if you tune carefully you will find there IS a signal peak
right next to the attenuation null. This is the case when I use the
loop on some of my portables.

5484. Lloyd Davies rumor....

Newsgroup: rec.radio.shortwave
Date: 2005-07-23 16:06:29 UTC
From: "ars_wa8mea@netzero.com" <ars_wa8mea@netzero.com>

Regarding this so-called rumor that Lloyd Davies is dead. I found nothing at five online newspapers and a county coroner's website.

Just wanted to let you know, that in spite of the large variety of people who dislike Lloyd and would like to see him dead, to propagate something like this is now being treated as "terrorism".

My XYL was just reading in our local newspaper this morning about an 18 year old boy/man who pulled a similar prank on a girlfriend who dumped him. He received 4 years in prison for terroristic threats.

I'd be willing to bet that out of all of the newsgroups on Usenet, even the political ones, RRS probably gets more complaints to the FBI and local law enforcement than any other. To quote Donald Anderson, W4JYZ; "It's so, so sad...."

Over-reacting with claims of "terrorism", while maybe exciting to
some, is rather juvenile.

Davies has become much of a "personality" here and about, as such, I
suspect he is no more protected than bush or any movie star you can
name--they end up the end of "cheap jokes" all the time. This
certainly DOES NOT warrant criminal prosecution!

Get a grip, everyone take a deep breath and calm down...

Who wrote this fine leftist propaganda piece Komrade David?

http://www.yubanet.com/artman/publish/article_23080.shtml

Rep. Henry A. Waxman - CaliPornia DemoCommunist

Henry A. Waxman represents California's 30th Congressional District, which includes the complete cities of Santa Monica, Beverly Hills, Agoura Hills, Calabasas, Hidden Hills, Malibu, Westlake Village and West Hollywood, as well as such areas of Los Angeles as Beverly-Fairfax, Pacific Palisades, Brentwood, Beverlywood, Topanga, Agoura, Chatsworth and Westwood.

The HollyWood Communist Actors Guild has kept him in office since the Anti-War movement in the 70's.

The Communist organization "Democracy Now" loves Henry Waxman.
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6891

Henry Waxman subjects himself to an interveiw with Red diaper baby Amy Goodman, Co-creator of Democracy Now
http://www.discoverthenetwork.com/individualProfile.asp?indid=1692

http://www.democracynow.org/article.pl?sid=05/07/12/1411222

Please notice that the DemoCommunists [Communists undercover] continue to disregard prudent security interests of the United States in order to further their Leftist/Progressive/Socialist/Communists political agenda's.

His voting record is interesting:

Jul 14, 2005 - House Vote
H.R. 3100: East Asia Security Act of 2005
Official Title: To authorize measures to deter arms transfers by foreign countries to the People's Republic of China.

Vote >>>> Rep. Henry Waxman [D-CA]: Nay <<<<

Jun 22, 2005 - House Vote
H.J.Res. 10: Flag Desecration resolution

-=jd=-:

At this point, I always lose the conversation.

My gov't (public servants, from bush on down--my employees really)
have no "rights", other than the simple rights equal to those held by
other citizens.

In any test, where a balance between "ethics" and the "peoples' right
to know" is in question, it always will tip in favor of the people.

While "being secure in ones' person" is a valid entitlement, our
servants have no expanded or other "rights." Indeed, if they ever
behave in any manner which is not beneficial to citizens as a whole,
their immediate removal and possible confinement comes into question.

While this "controversy" wages, if there is any question,
what-so-ever, that this is merely a ruse to hold the public enthralled
in disinformation or mechanizations and/or manipulations, those
individuals need to immediately be brought before a court and their
actions and intentions examined closely--or, such examined by our
representatives in congress--if appropriate...

5497. Joseph Wilson's Amazing Left-Wing Dreamland (How Propaganda Works - Pt II)

Newsgroup: rec.radio.shortwave
Date: 2005-07-23 17:03:39 UTC

AS THE SEEMINGLY ENDLESS SPIDERWEB OF LIES SPUN BY former Ambassador Joseph C. Wilson IV unravels, the media has gone out of its way to question the credibility of Karl Rove. Despite Rove's demonstrable non-leak of Valerie Plame's non-secret identity, the dogs continue to gather, hungry for a second term scandal, while the Wilsons' blatant self-promotion erodes whatever basis they had for a story in the first place. Perhaps Joe Wilson's two biggest whoppers were his claim to have spoken out because of his deep, non-partisan commitment to "truth," and his inconsolable remorse that his wife's closely guarded anonymity had become "collateral damage" in the Bush administration's war against him. What is at risk of being lost in the media hype of Karl Rove's "leak" is that Plame and Wilson had deep-seated ideological opposition to the Niger trip they set up, Plame apparently spiked that trip in advance, and she had long ago blown her status as a "secret" CIA agent.

Valerie Plame - the Soros Connection

In fact, Plame blew not only her own cover but that of a CIA front - in order to make a political donation to a leftist Democrat. The politics of non-partisan "centrist" Ambassador Wilson's wife is perhaps best expressed by her $372 donation to the George Soros front group Americans Coming Together. Plame made her grant to ACT - the part of the "Shadow Party" entrusted with getting out John Kerry's vote - in October 2004. However, the "undercover" agent previously used her CIA name, "Ms. Valerie E. Wilson" - and also disclosed her home address on the form - to make a $1,000 donation to Al Gore in 2000, listing her job as an "Analyst" at "Brewster-Jennings & Associates." Thus, her hard-driving political agenda and dismissive regard for national security exposed her fellow agents to even greater risk.

The political philanthropy of Joseph C. Wilson IV similarly lines up with his wife's leftist agenda. He also gave $2,000 to Gore in 2000 (although he took back $1,000 of that), as well as $1,000 to Sen. Ted Kennedy, and $500 to Rep. Charlie Rangel in the same election cycle. In 2002, his employment prospects dimmed while his patronage increased. Thus, he donated $1,000 to Hillary Clinton's HILLPAC; $250 to Rep. Nick Rahall, D-WV; and $500 for Idaho Democrat Alan Blinken's failed bid for the Senate in 2002. In 2004, he donated $2,000 to John Kerry's presidential campaign, where he landed a job as a consultant. Wilson's left-wing defenders cite his $1,000 donation to George W. Bush, in 2000 and the $1,500 he gave to Rep. Ed Royce, R-CA, over the course of several years as proof of his bipartisanship. Others believe Wilson was covering his bases for a federal job in 2000, and have also noted Royce sits on the Committee on International Relations.

No &#65533;Anonymity&#65533;

Joseph Wilson literally cried crocodile tears at the exposure his left-wing political activism has brought him and his CIA operative wife. He sat, wringing his hands at the fate that could befall an agent whose identity becomes known. &#65533;Naming her this way would have compromised every operation, every relationship, every network with which she had been associated in her entire career,&#65533; he shrieked. However, Plame&#65533;s identity was, in the words of Robert Novak, &#65533;not much of a secret.&#65533; Cliff May states he was told of Plame&#65533;s work &#65533; as a desk jockey at Langley, to which job she drove everyday &#65533; in a blas&#65533; manner, as though all Washington insiders knew of it. Perhaps they did; Plame acknowledges she &#65533;outed&#65533; herself to Joseph Wilson at roughly the time of their first kiss. Given the current dating-and-mating habits of Beltways divorcees, she&#65533;s likely kissed others, perhaps using her CIA job as foreplay at each rendezvous. As noted above, she also exposed her Agency name and cover job on her political donation to Al Gore in 2000. In fact, other national media outlets had named her as an agent before Karl Rove&#65533;s disclosure to Novak. Further, the CIA did nothing to prevent Robert Novak from printing her name in his syndicated column, indicating they did not consider the exposure vital &#65533; perhaps grudging recognition of the fact that this genie had long been out of the bottle. Still at a National Press Club meeting in 2003, standing alongside Daniel Ellsberg, Wilson choked up, breaking down as he looked his wife in the face and vowed, &#65533;If I could give you back your anonymity&#65533;I would do it in a minute.&#65533; Sorry, Val, you can&#65533;t get your virginity back.

Since the inadvertent &#65533;leak&#65533; of her name, Wilson and Plame have comported themselves as the perfect victims all the while seeking out the brightest spotlight the media could shine on them. A week before working himself into tears with Ellsberg, Joe Wilson told NBC&#65533;s Tim Russert, &#65533;my wife&#65533;would rather chop off her right arm than say anything to the press, and she will not allow herself to be photographed.&#65533; Plame has since posed for a picture for Vanity Fair reporter (exposing both arms) and spoke with the magazine&#65533;s reporter &#65533;on a not-for-attribution basis.&#65533; In an MSNBC interview, Wilson described his wife as &#65533;obviously nonplussed at this unwanted attention brought again on our family.&#65533; Yet two weeks ago, this Mother Bear met with London Telegraph reporter Philip Sherwell at her home, allowing him to publish the names of her five-year-old twins (Samantha and Trevor) in the international media. Not even all the mainstream media have bought the Wilsons&#65533; righteous victimology shtick. In an aside to his readers immediately before this, the MSNBC interviewer notes, &#65533;Up until recently, a tongue-in-cheek photo in Vanity Fair was the only well-known image of her. But now the Wilsons have gone public, and new photos show what the former undercover spy looks like.&#65533; Indeed, you can see Plame and Wilson, for instance, in this picture, taken at a swanky Georgetown eatery hocking Wilson&#65533;s book.

A Pre-Emptive Strike on Pro-War Intelligence

Like the Wilson family&#65533;s forlorn reaction to having media attention and a book deal thrust upon them, neither was the Plame/Wilson decision to go to

Niger to check out the yellowcake uranium what it seemed. The duo set out to spike the Niger uranium story from the first. Upon hearing the CIA had opened an investigation into whether Saddam Hussein had attempted to purchase ingredients for a doomsday device from the sub-Saharan African nation, Plame lined up her hubby for the trip, knowing his political disposition. Upon telling Wilson of his assignment, she referred to the to the Niger claim as &#65533;this crazy report.&#65533; Inspector Wilson then, by his own account, spent &#65533;eight days drinking sweet mint tea and meeting with dozens of people.&#65533; Despite his grueling interrogations, often conducted at poolside, he did not find anything whatever of value. He then went home and held his fire for months after President Bush cited the possible Niger yellowcake deal to write his op-ed. Wilson then claimed the documents Bush used to prove the yellowcake connection were forged, because &#65533;the dates were wrong and the names were wrong.&#65533; However, the CIA didn&#65533;t have those files until eight months after Wilson&#65533;s African vacation. Wilson sheepishly stated he may have &#65533;misspoken.&#65533;

The Officials Who Knew Not Joseph

&#65533;Misspoken&#65533; could designate every remark Wilson has ever made. His entire public testimony is a tear of lies.

Although he clearly intimated Vice President Dick Cheney sent him on his fact-finding mission, Cheney said he had never heard of Wilson before his scathing op-ed on Niger. Wilson responded by telling CNN&#65533;s Wolf Blitzer: &#65533;Well, look, it's absolutely true that neither the vice president nor Dr. Rice nor even George Tenet knew that I was traveling to Niger. What they did, what the office of the vice president did, and, in fact, I believe now from Mr. Libby's statement, it was probably the vice president himself&#65533; who sent him after all. OK&#65533;.

When it came to light that Wilson got his job because of his wife&#65533;s recommendation, Wilson retorted in his book, &#65533;Valerie had nothing to do with the matter. She definitely had not proposed that I make the trip.&#65533; Instead, he avers, Plame&#65533;s &#65533;supervisors asked her to contact me.&#65533; In fact, Plame wrote a CIA higher-up that her hubby enjoyed &#65533;good relations with both the Prime Minister and the former Minister of Mines [of Niger], not to mention lots of French contacts&#65533; &#65533; surprised? &#65533; &#65533;both of whom could possibly shed light on this sort of activity.&#65533; Upon reading this, Wilson responded, &#65533;I don't see it as a recommendation to send me&#65533;! Plame followed up with another suggestion that her husband get the job, which he did. In fact, she had snagged a similar trip to Niger for hubby in 1999. The fact that an apparently incompetent, apparently underqualified individual got the nod for an all-expense-paid trip to Africa due to nepotism has received no greater attention from &#65533;Good Government&#65533; liberals than, say, Bill Clinton&#65533;s appointing his wife to head up a health care task force.

Wilson has dissembled that upon returning to the States, he wrote a report of his activities. In fact, he never laid pen to paper, instead being debriefed by others at the CIA.

Although he claims there is no proof of Iraq's intent to purchase yellowcake uranium, as President Bush said in his 2003 State of the Union Address. the CIA interpreted Wilson's own findings to support that notion. The analysts who heard Wilson's oral report said it "lent more credibility to the original Central Intelligence Agency (CIA) reports on the uranium deal." Their written report of his activities reveals that Niger Prime Minister Ibrahim Mayaki told him he believed Iraq had made an overture to purchase uranium in the past. Further, the British stand by their assertion, which was the actual basis for the "16 Words" in the president's State of the Union Address.

Since penning his book and posing for a half-dozen pictures with his super-secret undercover wife, Joseph Wilson had faded into the recesses of the national memory where mediocrity should have permanently confined him. However, the latest investigation into Karl Rove's non-leak has brought him roaring back onto the public stage, this time lying that Karl Rove identified his wife by name. According to Time reporter Matt Cooper's e-mail, it was Cooper who called Rove, about another topic, and it was Cooper who abruptly changed the subject to Joe Wilson. At that point, Rove advised him not to "get too far out on" the story. Cooper's e-mail states, the vice president had nothing to do with Wilson's incompetent mission; "it was, KR said, wilson's [sic.] wife, who apparently works at the agency" who worked it out. Having seen this e-mail, Wilson stood athwart reality, insisting:

My wife's name is Mrs. Joseph Wilson. It is Mrs.Valerie Wilson. And he named her. He identified her. So that argument I don't believe stands the test of " stands the smell test.

You could cut the irony with a knife.

No Criminality

Despite the current anti-Rove witchhunt, the Left has yet to present evidence of any criminal wrongdoing. According to the strictures of the 1982 Intelligence Identities Protection Act, to break the law one must reveal the name of a covert agent, must know that person is a covert agent who has been abroad within the past five years, the CIA must acknowledge it is trying to conceal the identity of this agent, and the disclosure must "clearly represent a conscious and pernicious effort to identify and expose agents with the intent to impair or impede the foreign intelligence activities of the United States." Clearly, Rove's comments do not meet this standard. He seems not to have known her name. She never had a "deep cover" story and certainly didn't behave as though confidentiality were her prime goal. Moreover, Wilson notes in his book that Plame (sorry, "Mrs. Joseph Wilson") last returned from overseas in 1997, six years before Robert Novak's column identified her as an operative.

These facts are well-known to the media. Thirty-six "mainstream" media organizations " including the White House Correspondents " filed an amici curiae brief on behalf of Judith Miller pointing all these facts out. Yet they continue howling for Karl Rove's head. Like George W. Bush's

non-scandal at the National Guard, this is becoming the non-story that refuses to go away.

Wilson and Plame are run-of-the-mill, leftist climbers who have found a constituency on the Bush-hating Left willing to believe anything. They temporarily shook loose the fetters of anonymity to cast doubt upon the president of the United States. However, alternate media outlets such as talk radio and FrontPage Magazine have shined light upon the background of Wilson and Wilson, revealing their agenda and falsehoods for what they are. Despite this, there remains a portion of the far-Left committed to believing every Bush-bashing story floated in the media, even if it means entering Mr. and Mrs. Joseph Wilson's fantasyland.

It is a striking fact of post 9/11 history, that following its defeat in the Cold War the American left has rejuvenated itself through its opposition to the war in Iraq. It has thus launched what will possibly be another fifty year crusade against the cause of freedom, equally as futile and potentially even more destructive than its efforts on behalf of the Communist empire.

As in the last decades of the Cold War, when it did not exactly embrace our Communist enemies but instead "critically supported" them, the left does not exactly embrace the Islamist terrorists today. But it does the next best thing by offering them critical support in the form of apologetics for their savagery ("root causes" etc.), by mounting relentless attacks on America's defenses (our borders, the Patriot Act), by diversionary and morale-sapping propaganda campaigns over Guantanamo and Abu Ghraib and even through a political movement to sabotage the military effort to liberate Iraq (the "Counter-Recruitment campaign on America's college and high school campuses). Unholy Alliance is an attempt to understand this phenomenon: to explain the paradox of a left that thinks of itself as "progressive" but which has once again entered into practical alliances with the most reactionary and oppressive forces on the planet.

If this is true, then the CCP is crazier than the Soviets, or even the Indians. In both the US-Soviet and India-Pakistan conflicts, both sides eventually realized that a nuclear holocaust would be counterproductive. If the CCP is dead set on nuking the West in order to erase capitalism at any cost, they'll find that the cost is very high indeed. I suppose that after China nukes the West, the remaining world will go mad with joy that the "Great Oppressor" is finally gone. Then the Great Hangover will start. No more food (the US produces most of the world's food supply). No more markets for such things as oil, and the cheap trinkets turned out by the Chinese industrial machine. The Third World will find that the Great Oppressor really wasn't that bad after all. But by then it will be too late, and the radiation clouds will be on the move, and the black rain will start to fall. After that storm passes, the world will find that their land and water are contaminated. Permanently. I figure that the CCP officials figure that they'll be safe in their bunkers with their 5 year food and water supply. But this contamination won't go away, and eventually the elite will have to emerge, and then they'll die too. It was this prospect that brought nations back from the brink before. But if the CCP just wants to destroy capitalism, and is willing to die themselves in the process, then there's no telling what they'll do. (Watch Li ignore this post, as he's ignored all my other posts criticizing the CCP, while he's all over my posts criticizing HIM.)

The data format is available in their time standards doc, NIST Special
Publication 432. It's at their web site, somewhere in ?.nist.gov.
About a 3 megabyte .pdf, 80 pages. (Hey, I never looked at the WWVB
section before. Cool pictures of the antennas and transmitter).

There's 60 bits with minute, hour, day of year, two decimal digits of
year, and bits for leap year and daylight savings time and other stuff.
There's no seconds information, as it's sent at 1 baud and it takes
a minute to send the packet.

Unfortunately a large portion of the ham community has chosen to ignore
the fact that morse code is not used in any significant communications
in the western world. They cling to the outdated notion that group of
radio amateurs with the ability to transcribe morse code at some slow
speed will serve some useful purpose in an emergency situation. That
none of the professional services could hear them if they were to
transmit morese code in an emergency seems to escape most currently
licensed hams. They seem to enjoy Walter Mitty like daydreams where

the hams all hit the spectrum to save the little community when the hurricane hits. I have an EE in the family who helps design communications systems for the defense dept. When the office shop talk turns to hams and mars operators they just sort of chuckle about how far out of date those mostly old guys really are.

I like how you guys get all upset and need to call me names :) You guys are all the same. I'd treat you to a subscription of the Weekly Standard but I'm sure you already have it. The best part is bush will be gone for good in another 3 years shmuck-a doodle. That's all that matters.

That election was stolen. One method was not supplying enough voting machines for the millions of young smart colledge students who wanted him out. They have kicked all military reruiters off the campus too. You're an old world putz.
What you say means ABSOLUTELY NOTHING TO ME. So please, conjure up some new names for me and post them you little person.

Thank you
Lucky

Not sure what you are asking the reason for.

But if it is why hams cling to the need to require prospective hams
take a purposeless test, I think it is mostly because they had to take
the test in a time when knowlege of the code was important. It can be
difficult to realize that times have changed and that the morse code
test no longer provides a pool of hams with a useful (or useable)
skill.

Hi Steve,

Hope all is well with you.

a Sharper Image store in Ark has 30 of them. I called my local SI here in Miami and they already have an order number for them #XD413 The saleman told him he doesn't know when it will come in but it's advertised in their Aug. catalog already. We should see it in a couple more weeks.

Also, SI has a 60 day return policy at least here in Miami so if I don't like after 2 months, it just goes back. With slectable sideband on it, I can't want to try it. Plus sat radio if you want it one day.

Lucky

If I were going to buy one, I'd at least hold out until a later production run. If you buy one now, and if there are lots of quality control issues, then it may well conk out on you on day 61. And I bet it won't perform as well as your HF-150 even when it's working properly.

I assume you mean Saddam as one of those? I'm not really sure I understand how he was sympathetic to terrorists and/or Muslims. I think he just liked being dictator in his country. I don't think he really cared about much more.

> and
> occupied two whole countries that once were sympathetic to the terrorists.

In what way was Iraq sympathetic?

Good riddance. An action that was completely justifiable.

> Hussein -
> gone. Khaddafi folding like a cheap tent and abandoning WMD's.

Abandoning is always good, however wasn't he rewarded after he did that? I understand there are a lot of Pan AM victim's families that did not like what we did after that.

> Muslims
> voicing opposition to terrorists and their tactics. Iran sandwiched

Too bad we couldn't get that in Saudi Arabia. But we don't have much of a say when we are major importers of their crude.

> It remains to be seen how successful the Bush administration's
> plans and policies will be, but the successes listed above are now a

It has yet to be seen in Iraq is a success. They may be pushed into a civil war and all this Deomcracy stuff will be thrown out the window. Understand that the London type bombings are nearly a daily occurence there. Imagine if that happened here? People don't feel safe and they don't think the Iraqi forces are capable of protecting them.

Who knows. Muslims, Christians, Jews have been at odds and war for a very
long time. I don't see this as anything they haven't experienced and
learned from. Instead of a local war though, this war is against US and the
whole world now.

A draft is the only solution, because the services in general,
especially the Army are having real problems attracting people.
Throwing more money isn't going to change the fact that not many people
really want to put themselvs in harms way repeatedly for a highly
questionable cause. It sure isn't going to cause some weekend warrior
to forgo civilian pay for the pittance the military pays to re-enlist
and stnad the chance of getting shot.

There should be aCIA report outlining the damages caused by the
revelation. Since that report has not been ''leaked'' one must assume
that it makes the WH look worse than they already do.

Your timeline is flawed. The White House requested info about the
Wilsons on 7 July 2003. Rove ''leaked'' to Novak on 8 July 2003.

Where and when did anyone in the media report that Mrs. Wilson was a
CIA UC prior to Novak's piece?

Not to worry, however, you couldn't pass the written test anyways.

No, the drunk who did the "Roll Call" got his butt fragged by the FCC
for reading police and credit reoprts over the air.

Now now Mr. Ace .. those are such harsh words.

Perhaps we should call for testimonials from users of the Tiny-Tenna.
Get the info first hand. They could check in with basic info:
- name
- location
- what's the DX-iest station they ever heard with their Tiny-Tenna.
- what radio they use with their tiny-tenna
- do they wish the FCC would dump the code test from a ham license.

We could even give prizes.
First prize - Kevin will mention your name on The Great Liberty Net.
Second prize - Kind Jewish Indian will mention your name to "the
friendlies".
Third prize - the Tiny-Tenna user gets to hang out with Nashville Joe
at the Huntsville hamfest.

There - that oughta bring out a few million testimonials. We predict
(no pun intended) that they'd all be from Mr. Davies, though.

You know everytime you post a message you do nothing but
display (A) your vitriolic hatred of Bush and (B) your total lack of
any real factual knowledge. And (C) your pathetic little college Clide
attitude no doubt spoon fed by todays crop of superlib college profs.

YOU were the first one to sling names, not me, I was responding
in kind.
Here are some real facts about the 2000 election.

After the election there were 2 news consortiums conducting massive
recounts of Fla. Ballots. One group was headed by USA Today and
the Miami Herald. The other group was headed by 8 newsgroups :
The Washington Post, The New York Times, The LA Times, The
Chicago Tribune, The Associated Press, and CNN. The 2 groups
came to almost identical conclusions. To quote from USA Todays
group findings (May 11 2001) 3 questions were asked

1. Who would have won if Gore had gotten the manual recounts
he requested? Answer, GW Bush
2. Who would have won if the US Supreme Court had not stopped
the hand recount of undervotes which were ballots that registered
no machine readable vote for either candidate? Answer: GW Bush
under 3 of 4 standards
3. Who would have won if ALL disputed ballots including those
rejected by machines because they had more than 1 vote for pres.
had been recounted by hand? Answer: GW Bush under 2 of the
most widely used standards

Fla. has NO law providing a mechanism for a state wide
recount. Fla. ONLY has a county by county recount method
in place.

Lastly lets not forget the early call by the media ending the election
at 8:00PM EST. When the panhandle of Fla. which is predominately
republican is on a different time zone. At 8PM EST ABC, CBS,
CNN, FOX, MSNBC, and NBC stated the Fla. state voting is
over. CBS made 18 direct statements to that effect. Most interesting
is the fact that Dem. strategist Bob Beckel concluded Bush lost an
estimated 8,000 votes because of the anouncement by the news
agencies called an early win for Gore. Later estimates by another
group states Bush may have lost up to 10,000 votes for this reason.

Lastly the election was not stolen you little college geek. Or maybe
I shouldnt call you a college Clide, maybe your'e a drop out or just
a wanna be. But keep up with the idiot posts,, if you are an example
of your party we need more of you, so you Dems keep LOSING!

Well I may be considerably older than you and proud of it. There
is an old saying "with age comes wisdom" So you must be about
7. LOL at the little retard.

USA Today Conceals Key Information in Recount Story

4/11/01

On April 4, USA Today announced the results of its long-anticipated re-examination of Florida ballots (done in conjunction with the Miami Herald) with the headline: "Newspapers' Recount Shows Bush Prevailed in Fla. Vote."

The headline touting a Bush win referred to the paper's estimate of what would have happened if the U.S. Supreme Court had not blocked the hand recount of 60 Florida counties that had been ordered by the state Supreme Court. The paper found that Bush likely would have won such a recount.

But USA Today's investigation also found something else-- something it chose not to tell its readers: The official hand counts in the remaining seven Florida counties, completed before the U.S. Supreme Court stepped in, had missed hundreds, even thousands of potential Gore votes. If those votes had been properly counted, under two of the four counting standards used by the paper to determine valid votes, Gore would have won the entire state by 300 to 400 votes.

The paper examined ballots from all 67 counties in Florida, but it only *reported* the results from 60 counties where hand counts were unfinished (except on the paper's website, USAToday.com). The paper's decision to exclude its findings in seven counties was based on its strategy of trying to answer only one narrow question: What would have happened if the U.S. Supreme Court had not stepped in and stopped the manual recounts in Florida?

The paper therefore included only the *official* results from the seven counties, even though its own investigation found that the official results had potentially missed enough Gore votes to change the outcome of the election. None of this was revealed to USA Today's readers. The April 4 article explained that the "official counts were final and would not have changed if the U.S. Supreme Court had not

stopped the hand recount."

In making this decision, USA Today failed to report some of the most newsworthy aspects of its own ballot review. The Miami Herald, which worked with USA Today on the study, also played down the fact that the re-examination showed that Gore got more votes than Bush under two of the four standards (4/4/01). But the Florida paper at least provided its readers some valuable information about the limitations of the official recounts from the seven counties.

The Herald explained in an April 5 follow-up story that canvassing boards in Broward and Palm Beach counties "could have credited hundreds more ballots to the Democrat if they had counted every dimple, pinprick and hanging chad as a vote, a review of ballots in both counties shows. In Broward, where the official hand recount added 567 votes to Gore's county lead over Bush, a Herald-sponsored ballot review found that Gore's margin could have been 1,475, if every mark had been counted as a valid vote. In Palm Beach, where the official hand recount added a net gain of 174 votes to Gore's tally, the Herald-sponsored review found a potential Gore net gain of 1,081."

The Herald also reported on April 4 that the standards used in the original manual recount were not applied consistently: "The review found that canvassing boards in those counties discarded hundreds of ballots that bore marks no different from those on scores of ballots that were accepted as valid presidential votes. Had those ballots instead been counted as valid votes, allowing dimples, pinpricks and hanging chads, Gore would be in the White House today."

The radical msulim world could be millions. How do you defeat an enemy that has different nationalities and appear benign until they strike? It's a worldwide enemy. Not like WWII where it was the Allies vs. the Axis.

Oh, you forgot the part where you're then retired from the military but then
they un-retire you and for a duration that's unknown. That's also a reason
why people aren't going into the service.

John S. wrote:
>
> Unfortunately a large portion of the ham community has chosen to ignore
> the fact that morse code is not used in any significant communications
> in the western world.

In fact, you are incorrect about this.

Repeating our message from earlier this week:

Morse Code is used to identify every VOR station in the US. VOR station identification takes place every 30 seconds. Every VOR radio has an ident switch that permits the pilot to hear the Morse Code identifier for the VOR station he's monitoring when navigating by radio. When flying under IFR conditions, this identifier is essential for correct location of the aircraft on the grid by the pilot, and identification of the correct course.

I would hardly call that insignificant. So, your premise on it's face is incorrect.

Now, to be thorough, here....the Morse identifier for a given station is printed on the sectional chart for that given region of airspace, so, it's not necessary that a pilot actually know the code, but if you've ever tried to read a sectional chart in flight, solo in the cockpit while trying to navigate it can be an unnecessary and unwanted distraction, especially when flying under less than optimum conditions. But many pilots, having learned their Morse Code as Boy Scouts, or in the military, or as part of the Amateur service, find it much simpler to simply hear and understand the code, than to take the time to read and then try to translate it into audible intelligence.

You may also be unaware that many V/UHF repeaters also identify by Morse Code, so while it's not exactly a requirement that an operator know the code, even non Code required licensees will find that knowing the code actually facilitates their operations. Especially under unusual propagation conditions, as we're experiencing now in Northern Illinois, where VHF signals are skipping in from greater distances than local repeaters' operating areas would normally fall. In which case, the Morse identifier permits an operator to know if he's actually hearing the correct repeater, or if he's actually hearing a repeater skipping in on anomalous propragation.

Again, not insignificant. Especially where operation on a repeater is by membership only and freeloaders are not welcome.

And again, to be thorough, non code licensees would still have to be able to hear and understand the code to prevent freeloading, or take the time to look up and translate the audible signal into understandable language for identification.

So, there you have two significant and relevant, current applications of Morse Code in the US, alone. There are more, to be sure.

For the record, this debate has been going on for decades. And it laways boils down to the unwilling badgering the authority to be granted the privileges that have been otherwise earned through diligent skill acquisition. Even when I was in Jr High, the code test was a bone of contention between members of the Ham Radio Club and applicants. And that was 40 years ago. The fight has only gotten more shrill.

And the code requirement itself was widely misunderstood. It was assumed that one had to take one's tests in order of rank and that before one could have phone access to the bands, one was required to spend no less than two years pounding brass. This alone ran off a lot of applicants. Truth is that one only had to know the code to get a license. Which license was largely a matter of preference, with one exception. I know many hams who never went through the Novice or Technician classes, but went straight to General and above.

In my own circles, this misunderstood abhorrence of the code drove my friends to CB, rather than to the more exciting and more useful world of the Amateur service. I took a different path, learning the code so I could hear and understand what was on my receiver, but since I had little interest in actually conversing...most of the people I'd want to talk to were in the skip zones anyway, I never pursued it further. I've always enjoyed the listening more than the talking. But, as with many things in life, I've learned that a skill acquired is never without practical application, and have found myself brushing up on my code frequently over the years, for everything from shortwave and ham band listening, to aviation monitoring, to emergency communications monitoring, to silly things like movie/tv watching. There is always a relevant application to the knowledge of Morse Code.

Simply abandoning knowledge of something because there are newer, better ways is only smart if the newer better ways can and will never fail. This is fantasy at best. In which case having a fall back, especially in communications, is prudent, even if it does seem like filling up your head with useless baggage at the time. Considering how times emergency communications have failed because of a poor microphone, high noise, or even partial failure of a radio, OOK in Morse Code is often the only option left in an emergency. And, as has been explained here numerous times, unlike any other form of communication which requires ever increasing layers of technology to get the job done, all that's required in Morse Code is one human operator on each end, and the ability to create a signal, regardless of how or what that signal is.

Personally, when my ass is on the line, I'd much rather rely on an experienced operator than any piece of technology.

Now, like the person sitting in the exitway on an airliner you may be unable, or unwilling to assist in the event of an emergency, and that's your right. But have the decency to get out of the way and let those who are willing and able to assist to do so.

Your premise that "morse code is not used in any significant communications in the western world," is patently false.

I remember watchin the lections that night. At about !:00 AM in the morning,
2 local TV stations announced,

"Some abllot box are misiing from a couple of the precints and the olice are
out looking for them now"

Missing? Fu*cking ballot boxes missing?
Is this some of Fu*cken joke? No it wasn't. I guess they werent tampered
with huh?

Remember Jeb Bush his brother runs this state of Florida. How about that
woman Kathleen or whatever her name was I forgot that was charge of the
"vote" and now running for Congress.

And how about all the blacks that were turned away down here in FL from
voting or were actually theratend with arrest? I heard stories first hand
and saw it on TV. How about Karl Rove blocking ex convicts that did their
time and could vote but were blocked anyway? How about not confusing messed
up voting procedures in poor counties?

Don't worry. This administrations tactics, power, and people like you will
be long gone one day and we shall rule. Until then
go be a good little man and enjoy your stuffed shirt dinosaur thinking low
cultured life. You guys are on your way out....

Lucky

Freedom Fried

by Archie Kennedy

http://www.aussieseek.com/

We are crossing a line and on the other side of that line there is fascism, totalitarianism, death squads, and crypto security. But in reality there is no security. It is a myth. But there are plenty of despots.
Freedom has a price. It is a price that we have been willing to pay for hundreds of years in most Western societies. The cost is a certain degree of necessary anxiety as a result of the unpredictable nature of disparate human impulses.

When the citizens and leaders of a society become jittery and fearful enough, they tend to sell their freedom for safety from the unknown and unpredictable. In societies that have cowed to fear, you may be stoned to death for committing adultery, you may be sanctioned for â??extremistâ?? views, or you may be put to death for a crime you have not committed. That is a problem with a secure society. It is, after all, a myth. The upside is that all the trains tend to run on time.

To live in a free society we must tolerate known criminals living in our midst. We must tolerate all sorts of political and philosophical opinions that are an affront to our sensibilities. We have to accept the fact that anything can happen. Many unpleasant possibilities are plausible, even the possibility of being killed. But thatâ??s life. Security is a myth and if we take a look around, if we take a look at what happens when societies give in to fear, we can see what happens. Those societies become tyrannical nightmares.

There is a border, a clear and distinct line that we cannot cross. We must prosecute a crime AFTER the individual has acted. And no nation can act against another preemptively.

That means that we cannot prosecute pedophiles that are likely to harm children before they act. Instead, we have to be awake and aware and take steps to protect them ourselves. The state cannot do it. We cannot prosecute those that will likely murder their spouse before they act. We have to act to protect ourselves and our loved ones. The state cannot do it. In free societies we have always endured this precarious situation. But we have done it.

But now all that is changing and what it may mean for us is a future of having to endure the iron shackles of an arbitrary and brutal state

apparatus. We have to ask ourselves if we are that cowardly. Are we timid and fearful to the point that we allow the terrorists that slaughtered the people in the twin towers to take away our freedom?

They seem to be winning the war that Bush had boldly declared against terrorism. Not so much in the sense that they are managing to create enough carnage and fear in Iraq to be party to the complete terrorizing of that society as much as the effect they are having on American society. This also spills over into British, Canadian, Australian and many other societies.

Coincidentally, and fortunately for the terrorists of both stripes (the Arab terrorists and the American terrorists) there were two bombings in London just prior to a vote in the US House of Representatives on renewal of the misnamed and potentially fascistic Patriot Act. Following hours of intense debate they voted 257-171 to permanently extend 14 of 16 provisions that had a four year sunset. The remaining two provisions were given a ten year lease on life. This would not have happened without the London bombings. You'd almost think the Mid-Eastren and Western neo cons were working together. One provision is to permit "roving wiretaps" and the other will allow the state to search individuals library and medical records.

If it is the long term plan of the terrorists to destroy individual freedom in the West, they are doing a bang up job. Unfortunately, they are on the same page in this regard as the neo cons that are pushing this cancerous virus against the spirit of freedom through the media, through legislation and through the minds of the timid and fearful fools that buy into this fearful bullshit.

On this political front, we may have to make uncomfortable bedfellows. There are some conservatives that are vehemently passionate about individual liberty, some liberals and socialists as well. On this matter, we should be prepared to drop the guns we tend to hold at one another's heads and work together against the conservatives, liberals and socialists, that don't give a flying fuck about individual liberty and especially the terrorists and neo cons that are working to destroy it

Really, you don't expect to take one or two simple points, stretch
them to a whole book with gobs of un-necessary text, then expect
someone to read it to the end, do you? Well, if so, this is just to
inform you I am not... bet I am not the only fool who just doesn't
get how important your long winded rants are! <grin>

\----------

Lets say for the sake of discussion all the above to be true,
I dont buy it but lets asy its true. It still does not address the 8-10,00
votes Bush lost because of the stupid news orgs announcing an early
win by Gore. And announcing that state voting had closed at 8 PM
EST when the western counties were on a different time zone so
thousands of republican voters simply went home. It doesnt address
the military absentee ballots that werent counted for a variety of
bogus reasons. And by the way the above number of 8,000 votes
lost comes from Bob Beckell the then Dem strategist. Any way
you want to play it, Bush won whether you like it or not. SCOTUS
had it right..... Amd BTW in most states that use antiquated
paper punching type balloting, any ballot that doesnt have an actual
HOLE where its supposed to be, the ballot is discarded, kinda blows
your last point out of the water.

So why did Rove and Libby lie to the investigators? Why did they make
poor Scotty McLellan lie for them to the press?

John,trust me,,,, you don't! want to get me started about limeyland! That pretty married Irish woman (she is originally from Caherconlish,Ireland and her hubby is originally from Fethard,Ireland (www.fethard.com) I chat with in Bognor Regis,England (I call it Booger Regizz) is half Irish on her dad's side of the family (her dad just got back from two weeks in Ireland,guess what? he is fixin to head on back over to Ireland again,his daughter books his flights on Ryanair) and she is half brit on her mom's side of the family.I have been knowing that married Irish woman for over five and a half years.She hates limeyland.She isn't a dummy either,that gal is smart as a tack.

Actually, I would expect nothing less. But then, I also realize that
in today's soundbyte world of communication, expecting anyone to go the
distance is pretty much a fantasy.

But then, that's precisely the heart of this discussion, isn't it.

This "war" is bad.

It's a "war on terrorism," but terrorism is GETTING WORSE.

It's just been broadcast on the radio that the fella that got shot five times was from Brazil and had nothing to do with the terrorists.

The downside to shoot first, ask questions later.

And when with this change be occuring.

In other words, who many American soldiers and innocent Iraqis will die before this experiment starts paying off.

As I'm sure you're aware, NO ONE KNOWS, since this is the very first "war on terrorism."

If the model is the "war on drugs," we're fucked.

So what. There are some police comm systems that still send a morse
identifier. I suppose it is entertaining and marginally useful to be
able to decode the id's by oneself, but that's about all.

Yes, yes, I know and in every junior and high school there was once a
radio club with lots of junior sparkies having a lot of fun. But my
friend, along with narrow lapel natural shoulder grey flannel suits,
narrow dark ties and white buck shoes those times are long since gone.

But there is nobody of consequence to talk with using morse code.
Other than other hams. If you send morse code signals to some federal
or state agency during an emergency there is a high likelihood they
won't even hear you. If an operator happens to hear you there is every
chance you will not be understood. The world has moved on from buggy
whips and horse drawn carriages.

> communications in the western world," is patently false.

My, my you do like to write long and windy posts don't you.
Obfuscation by volume or something similar. The supposed justification
for requiring a morse code test of prospective hams is to establish a
corps of citizen communicators who can communicate with authgorities,
rescure agencies, etc., during some local, regional or national
emergency. Guess what...none of the agencies who those hams are

supposed to communicate with still use morse code. Sure, a ham can passively decode VOR or other id's. I suppose that is fun for a while. The only other real world use for morse code is a handful of hams to communicate with one another. They can't talk to anyone else using morse code because nobody else uses it to 2 way comms.

One does not need to put on a military uniform to earn one's freedom.
One can start by standing up to terrorists and their unwitting amen
corner who want to destroy freedom.

This would make perfect sense had Einstein never had invented the nuclear age.

Today, it is very possible and increasingly likely, that a terrorist will use the ultimate terror weapon. It may not happen next week, next month or even within this decade. But it will happen. It's just a matter of time. Then what? Who will you blame? Your freedom loving government which allowed it to occur? Will you blame the intelligence community which is increasing being handstrung by worldwide leftist freedom propaganda. Or will you blame yourself for your short sighted stupidity as you bury your family members and send your son off to war? Or, which I believe is more likely, you will run over to your computer and post more leftist idiotic stupidity in order to further "the cause" by stating it was a government conspiracy to yet again increase the defense and intelligence budget.

Which will it be "next time"? Or maybe there won't be anyone around next time.

That's what you can call freedom on the day after. Freedom to die!

"AussieSeek.com Political Messageboards" <nswamfm@yahoo.com> wrote in message news:1122148671.638743.188380@g14g2000cwa.googlegroups.com...
Freedom Fried

by Archie Kennedy

http://www.aussieseek.com/

We are crossing a line and on the other side of that line there is fascism, totalitarianism, death squads, and crypto security. But in reality there is no security. It is a myth. But there are plenty of despots.
Freedom has a price. It is a price that we have been willing to pay for hundreds of years in most Western societies. The cost is a certain degree of necessary anxiety as a result of the unpredictable nature of disparate human impulses.

When the citizens and leaders of a society become jittery and fearful enough, they tend to sell their freedom for safety from the unknown and unpredictable. In societies that have cowed to fear, you may be stoned to death for committing adultery, you may be sanctioned for ??extremist?? views, or you may be put to death for a crime you have not committed. That is a problem with a secure society. It is, after all, a myth. The upside is that all the trains tend to run on time.

To live in a free society we must tolerate known criminals living in our midst. We must tolerate all sorts of political and philosophical opinions that are an affront to our sensibilities. We have to accept the fact that anything can happen. Many unpleasant possibilities are plausible, even the possibility of being killed. But that's life. Security is a myth and if we take a look around, if we take a look at what happens when societies give in to fear, we can see what happens. Those societies become tyrannical nightmares.

There is a border, a clear and distinct line that we cannot cross. We must prosecute a crime AFTER the individual has acted. And no nation can act against another preemptively.

That means that we cannot prosecute pedophiles that are likely to harm children before they act. Instead, we have to be awake and aware and take steps to protect them ourselves. The state cannot do it. We cannot prosecute those that will likely murder their spouse before they act. We have to act to protect ourselves and our loved ones. The state cannot do it. In free societies we have always endured this precarious situation. But we have done it.

But now all that is changing and what it may mean for us is a future of having to endure the iron shackles of an arbitrary and brutal state apparatus. We have to ask ourselves if we are that cowardly. Are we timid and fearful to the point that we allow the terrorists that slaughtered the people in the twin towers to take away our freedom?

They seem to be winning the war that Bush had boldly declared against terrorism. Not so much in the sense that they are managing to create enough carnage and fear in Iraq to be party to the complete terrorizing of that society as much as the effect they are having on American society. This also spills over into British, Canadian, Australian and many other societies.

Coincidentally, and fortunately for the terrorists of both stripes (the Arab terrorists and the American terrorists) there were two bombings in London just prior to a vote in the US House of Representatives on renewal of the misnamed and potentially fascistic Patriot Act. Following hours of intense debate they voted 257-171 to permanently extend 14 of 16 provisions that had a four year sunset. The remaining two provisions were given a ten year lease on life. This would not have happened without the London bombings. You'd almost think the Mid-Eastren and Western neo cons were working together. One provision is to permit "roving wiretaps" and the other will allow the state to search individuals library and medical records.

If it is the long term plan of the terrorists to destroy individual freedom in the West, they are doing a bang up job. Unfortunately, they are on the same page in this regard as the neo cons that are pushing this cancerous virus against the spirit of freedom through the media, through legislation and through the minds of the timid and fearful fools that buy into this fearful bullshit.

On this political front, we may have to make uncomfortable bedfellows. There are some conservatives that are vehemently passionate about individual liberty, some liberals and socialists as well. On this matter, we should be prepared to drop the guns we tend to hold at one another's heads and work together against the conservatives, liberals and socialists, that don't give a flying fuck about individual liberty and especially the terrorists and neo cons that are working to destroy it

Hey man you leave Wayne Greene outa thissa here argy-ment. Wayne's a hero. A legend in his own mind .. I mean ... time.

You shoulda been there. Atlanta hamfest in the late 1970s. When it was held at the old Marriott. He was a forum speaker there. We dropped in 2 years in a row - 1977 &1978. It was when "hobby computers", as he called them, were first coming on. Both times he announced (emphatically) that he was going to become a billionaire (he emphisized the "b") writing computer games. (To this day I wonder if Bill Gates is feeling the heat of Mr. Greene's impending takeover.)

The 2nd year, he announced that his ex had just cleaned his clock in the divorce by taking Byte magazine from him. No problem - Kilobaud was gonna blow their doors off. He'd show her who could put out a computer magazine. Yeah right. Hey I Wonder what a complete collection of Kilobaud's would fetch on ebay. Har har har.

After one of the "seminars" we were even fortunate enough to ride the same elevator as Mr. Green and his entourage. Hmmm .. wonder what ever became of Sherry. We were guessing she was the cause of "the divorce". She was no Pamela Anderson, but for Mr. Greene, she was quite a fine specimen of "the younger woman".

I don't care if its real. It's not on topic. I don't even care if people
occasionally post off topic but when it's all they do they should find a
more appropriate news group that fits their interest.

Totally idiotic to wage a "war against drugs", should just legalize
'em and move on...

"War on Terrorism" is where it is at, just find the enemy and
eliminate him... it just takes time and there is a cost... compared to
all the women in burkas and suffering domination under an islamic
rule--worth it!!!

I think it is a pipe dream to think we can ever leave Iraq (at least with Iraq still intact and an enemy), either they now learn to get along or they must be eliminated--I don't think many have come to that acceptance yet (well, except our gov't leaders) the public at large is still in denial...

cuhulin:

It is my understanding that many military people and scientists already suspect that there are nuclear weapons here on our soil and under the control of foreign powers. Why there has not yet been a detonation is anyone's guess--perhaps they are in the act of attempting to blackmail our gov't as we speak here. But, I think all in the know, know there will be a nuclear detonation on American soil by a foreign power in the near future--then those who are not so anxious will be ready to fight, they will have little to lose then, since their life then will only depend on their willingness to fight...

I see it as similar to pearl harbor, we will know the right time to fight at our maximum potential...

Gee, do you mean sort of like your buddy, the self-appointed "ace" that just calls names rather than address issues?

As to the Taliban being gone...

...just ask the American soldiers that have been blown up or shot out of the sky if the Taliban are gone.

What's that?

You can't ask them you say?

Because they're all dead?

Well then, maybe you can ask their parents if the Taliban are gone.

"Political influence" would seem to be a moot point as long as they are still killing our boys...

The problem is, we're trying to fight an ideal, not a person or group of people. There will ALWAYS be new adherents to the ideal. There will always be those willing to give their lives for that ideal. Do you think that the west has a monopoly on people willing to die for what they believe in?

I don't know what the answer is.. maybe there isn't one. Life is that way.. some problems don't have a solution.. but this 'war on terrorism' is not a limited war, it will last indefinately, perhaps for the rest of mankind's time on the planet. It's like trying to fight crime.. a futile effort at best, because there will always be crime. We just have to take it a case at a time.

"Little Boy", the bomb dropped on Hiroshima, had a yield of ~16 kilotons

"Fat Man", the bomb dropped on Nagasaki, had a yield of 21 kilotons

To answer your question from your previous post, yes, nukes will do what you said.. but you also have to consider global wind patterns.. any bomb dropped in the middle east would have fallout all over Asia and the Pacific islands, probably Alaska as well, depending upon the time of year and position of the jet stream. This is to say, we would have China, Russia and India to deal with if we were to drop a good sized bomb anywhere over there. And that's only because of the fallout.. the greater political and economic considerations would vastly outweigh even that. We would almost certainly trigger a nuclear war from which few would emerge.

5626. Plame, Soros and Rove - Lets Tie a RED Bow On It!

DemoCommunists Showed Soros Secret Rove Plan

NR White House Correspondent Byron York's new book, The Vast Left Wing Conspiracy, details how MoveOn.org, George Soros, Michael Moore, 527 groups, Al Franken, and other Democratic activists built the biggest, richest, and best organized political movement in generations. The book reports that in 2003, as Democratic operatives were planning the campaign against President Bush, they obtained a copy of a top-secret Republican strategy plan authored by top White House political adviser Karl Rove. The following excerpt details how those operatives, as part of the effort to woo Soros and other multi-million dollar contributors, showed Soros the secret Rove plan during a crucial planning session at Soros's Hamptons estate. After the meeting, Soros became the biggest campaign donor in American history, giving more than $25 million to the effort to defeat George W. Bush.
...
...a secret, cutting-edge political strategy document prepared by Karl Rove, the president's top political advisor. The document, a PowerPoint presentation that outlined GOP strategy in the 2002 midterm elections and laid the groundwork for a similar strategy in 2004, had been made "unintentionally available" to Democrats in the first months of 2003, Steitz told me. It was not clear just how that happened [illegible] was it stolen? lost? leaked?
...
Soros might as well have been briefed by Karl Rove himself.
...
Within weeks, Soros began writing checks to ACT. First came $1 million on August 19. Then $2 million on September 12. Then another $2 million on December 23. And then $4.55 million to the Joint Victory Fund, an umbrella organization that then distributed the money to ACT, on April 15, 2004. In the beginning, Soros had pledged $10 million to ACT and other Democratic 527s. Then the number became $15 million. Then $20 million. Then $25 million. And then more. The 527s had never seen that amount of money come in from one person at one time. Soros would become the biggest donor in history.

Brenda:

Hmmm, I must look a bit dense to you... so, let's do it this way...

Do you see any great civilizations around which have existed for thousands of years in a fair, democratic state and are good for the average citizen to live under?

Ever wonder why the greek and roman empires fell? Even great empires which existed before them?

It will be darn easy for us to lose all this in a blink of an eye. For us to go the way of all past civilizations, for our lands, gov't, and way of life to fall to ruin, for all our nation to be enslaved by another and we be reduced to an existence hardly worth living...

Our forefathers knew this, in their writings they warned us to be constantly vigilant--and that they suspected there would come times in the future when we would have to give our lives--as they gave theirs--in order to hold this country--such a time has come...

Do you doubt that if the islamic nation is able to dominate us that you will be wearing a burka, your daughter forced to marry some old rich guy which favors her physical attributes, they she will never be able to realize true freedom?

Do you really doubt that those people have planned horrors for us which you do not even want to invade your nightmares, let alone ever be force to live under? Do you know if they succeed you may end up preferring death to your life as they will have you lead it?

This is very serious business here, unfortunately the American people refuse to take these matters seriously and are still just hoping for them to "go away."

Well, we will see, won't we?

> So, there you have two significant and relevant, current applications
> of Morse Code in the US, alone.

D Peter,

I am going to have to respectfully disagree with you.

For the VOR issue,

a) most (or at least many) pilots do not know the code (this from my avionics days in the Air National Guard 30 years ago and my current pilot friends)--and anyway, pilots aren't necessarily hams and thus would not be directly affected by the current FCC issue.

b) as you say, it's on the chart.

c) they can tell the station by the frequency that they dial in; i.e., if they already know enough to dial in the frequency, they already know the station).

d) many use GPS anyway

As a member of the Board of Directors for three big city repeaters , I believe it's a real stretch to call a CW repeater ID "significant and relevant"; I would say it's more like "incidental".

73,
Carter K8VT

P.S. I *like* CW--it's about 80% of my operating.

In philosophy it is called "begging the question".
A lay person may call it "The dog chasing its tail".
In David's case it is a perfect example of Communist style propaganda..

I guess some people would rather the hobby die than for it to get new members, just so they can point with PRIDE.....WE KILLED HAM RADIO! ISN'T THAT GREAT! I feel the written exams are a better way. what if we had to have hams tested in CW, RTTY, Slow scan, PSK, ad. nauseum, before they could get a license. End of my rant.

Points I already made. I didn't say it was a necessity. Or that
it was required or even suggested. But the statement to which I
responded asserted that the code was not in use in any significant
application. That's not true. It's used regularly.

>
> b) as you say, it's on the chart.

It IS on the chart. Knowing the code, however saves a lot of time
and when things are not going well in the cockpit. Especially when
VFR rules do not apply.

>
> c) they can tell the station by the frequency that they dial in; i.e.,

Not always true. Especially in very dense areas. Confirmation by
ident of the station is essential.

>
> d) many use GPS anyway

Far fewer than you thinl.

5642. I am baffled as to why anyone from Canada should care about the London bombings: UK's cultural broadcasting to Canada

Newsgroup: rec.radio.shortwave
Date: 2005-07-23 22:59:16 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <dbui6aukn2@gnus01.u.washington.edu>
Source record: 29179
Cross-posted to: rec.radio.shortwave,soc.culture.canada,soc.culture.welsh

I am baffled as to why anyone from Canada should care about the London bombings: UK's cultural broadcasting to Canada.

1. BBC World Service has totally abandoned transmissions to Canada, calling into question the nature and structure of the existing "Commonwealth" relationship with the UK.

2. There has been no UK encouragement for Canada to increase its international broadcasting budget (via RCI), so as to allow RCI to effectively become a 2nd "World Service" as it was during the 1950s and 1960s.

3. The UK has failed to persuade US TV broadcasting entities to abandon or change the way they broadcast to Canada

[US News and Information broadcasters that should "localise" to Canada]
-- CNN
-- MSNBC
-- Fox News (replaced with Sky News, Sky Fox Canada?)
etc ...

4. The UK has failed to encourage Australia & NZ to increase their (TV & SW) transmissions to Canada, a vital part of the "Commonwealth" glue.

5. Nor has the UK encouraged Australia (specifically) to increase its external broadcaster Radio Australia into a "3rd" regional axis (*) of commonwealth broadcasting.

(*) It is important for Commonwealth as a whole to have a somewhat unified multilateral cultural broadcasting effort -- not only for the security of the individual members, but for the security of the Commonwealth as a whole.

-=-=-=-=-=-
A class action lawsuit is 45 years overdue
-=-=-=-=-=-
The BBC World Service has never broadcast in Welsh to the Americas, save Patagonia (1946) -- in spite of the US & Canada having the most speakers of Welsh outside the UK. The change in broadcasting costs would be about nil.

dxAce:

This from that site:
"Public domain information does not allow a conclusive determination as to which had the largest yield. However, current best estimate is that the highest yield weapon was a version of the B41 with a yield of 25 mt."

Also, that looks like OLD data, I am pretty sure you can bet--we even have BIGGER than 250 megatons... think about it, where could we even begin to test one? Saturn, Jupiter? It would be too much to set one off here unless your real intent is to make a BIG portion of some country unlivable for a VERY long time...

However, say they don't have one that big in a single bomb... say they take one MX missile and simply detonate ALL 10 of the 20 megaton bombs on one target simultaneously--virtually the same effect, isn't it?

That will make one BIG area on this earth appear like the face of the sun, long enough to remove and sterilize EVERYTHING for tens of miles in all directions from the blast zone, if not more... I don't think anyone here can visualize the real damage such a weapon would do--let's face it, one has NEVER BEEN EXPLODED! And, there is damn good reason for that!

Frankly, I am not sure, but strongly suspect JUST ONE such detonation would make half of the state unsurvivable to live in for hundreds, if not thousands, if not 10's of thousands of years...

The term "serious weapon" is simply an understatement, "doomsday device" does not even describe the destruction capability of such a weapon accurately--it is BIGGER than that...

Now grant me the possibility that they DO have 250 metaton'ers, and they detonate a multiple number of that type of bomb on one target simultaneously--I have heard some scientists speculate that it could be enough to trigger a nuclear fusion reaction which becomes self-sustaining and the oceans of the earth catch fire and we become a small sun for a few millennia... of course, we are all gone and that is a moot point...

I will bow to those figures... and accept them...

The bombs we have will wipe out whole countries in a matter of
minutes... milliseconds-seconds for the actual detonation and
formation of a fireball reaching millions of degrees of heat...

Awesome is an understatement...

Yeah I know,the smallest nukes we have nowdays are at least twenty times more powerfull than the Fat Man and Little Boy Atomic Bombs that us good guys dropped on Hiroshima and Nagasaki.(y'all damn Japs hear that? Keep your damn noses clean!) www.devilfinder.com America drops Atomic Bombs on Japan (Send me to Hell! Devilfinder) All of the nukes on Earth,if set off at the same time would not kill off more than about thirty percent of the World's population of the species called Humans.The damn Roaches will live foever.

This is where the "shoot first ask questions later" crowd falls on its face.

If their car won't start, their best solution is to blow it up, not figure
out why it won't start.

I think it's intended to last forever.

The right-wing politicians and their defense contractor friends/donators got
powerful and rich off the cold war.

And before anyone calls me a liberal nut, it was Eisenhower who first spoke
of the "military industrial complex."

In other words, freedom is less important to you than having the "right side" win. It doesn't matter to you whether in the process of winning we've given up our humanity. As long as the US wins, that's all that's important. Freedom is just rhetoric. Well, the US is rapidly becoming like the Communist ruled China that you hate so much, and you and most other Americans don't seem to care, because to you the US is always right. Well, if we become a fascist dictatorship, the Republican Party will be no better than the CCP. All that will be different is the rhetoric. The actions will be the same. And you will be happy, since the "right side" will have won, but the only thing that will have won will be the forces of tyranny. You want to overthrow the tyranny of the CCP and replace it with the tyranny of the GOP. Well, I say bullshit.

If a man hasn't found a cause for which he is willing to die, then he isn't fit to live. -Martin Luther King Jr. I'm willing to die for freedom. Most people aren't. Most people live in fear of dying in a terrorist attack. Well, I say "bring it on". I'm not afraid of terrorists, Islamic, Communist, or American.

5654. TIS on 1610 in Clark Co(winchester) Ky

Newsgroup: rec.radio.shortwave
Date: 2005-07-23 23:23:22 UTC
From: r2000swler@hotmail.com
Message-ID: <1122161002.262388.200730@g47g2000cwa.googlegroups.com>
Source record: 29189

What power do TIS run?
I am picking up a TIS on 1610 from Winchester Ky
at S3. That is about 30 miles due east of me.
The station is a low bitrate digital job.
The bit rate is so low that it is prety distorted.
And it sounds like they program it over a phone line.
Real high quality audio. Not!

I think the ID is "72W9Uk398"
"Winchester Clark County Emergency Management travelers
information radio station operating on 1610 AM. This
station was funded by the Chemical Stockpile Preparedness
Program...."

The Army has a WWII stock pile of nerve agents located about
30 miles south west of Winchester. They have been planning
to destroy these things form 30 years.

Anyone else get this statin=on, andare they runing a "lot" more
power then is typical?

Terry

So people keeep telling me.
I have built many, around 30,of these little gems and they all
worked down to below MW with minimal losses. Read Mr Doty's
comments. They have all worked great from .5MHz to above
20MHz with every scalvaged TV core I have used. Perhaps I
have just been lucky, or maybe, just maybe for cores so small
loss are not as high as many people think.
I will include an observation from Mr Doty himself:"

> powdered iron!] core that I have tried. Anyone have any thoughts on
> that?

The biggest difference in performance due to different ferrites will be
at
longwave, not shortwave. At the highest shortwave frequencies, size
will
matter: 10 turns on a big core will have too much capacitance and
leakage
inductance at 30 MHz. At 10 MHz, 10 turns at 50 ohms looks good with
almost any ferrite.

Subject: Re: "Improved" matching transformer

In article (Who Did you Expect?) wrote:
> By "large", what do you mean? I am using the 1.2" OD type 43 Amidon
> ferritte core.

That's about the size where the problem becomes interesting. The rule of
thumb I use is that if the total amount of wire in the transformer is less
than 5% of a wavelength, the parasitics are likely to be negligible no
matter how you wind it, but if you have more wire, the winding details
will matter in complex ways. 5% of the wavelength at 30 MHz (10 m) is 50
cm, or 20". One turn on your core is about an inch, so a 10:10 is at the
edge, and a 30:10 violates the rule by a factor of 2 (but it's only a rule
of thumb).

10 turns was a conservative estimate based on the minimum inductance
expected from a small TV core. With detailed specs, you can compute the
turns required more accurately. If you want a lower 3 dB cutoff of 500 kHz
(this is likely to suffice even for LW DX), you want the magnetizing
inductance on the 50 ohm side to have a reactance of 50 ohms at 500 kHz:

Z = 2*Pi*f*L, so L = Z/(2 Pi f) = 50/(2*3.14*500000) = ~16 uH

This calculation is only valid if the lower cutoff is below the knee in
the permeability versus frequency curve. For 43 material, this is at 5
Mhz, so we're fine.

An FT-114-43 has a core constant of about 0.6uH/turn^2, so 5 turns yields
25*0.6 = 15 uH, which is close enough. A 5:5 is comfortably within the
rule of thumb, while a 15:5 is at the edge (but is probably better than
a 30:10).

> I have also used a BLN-73-202 with 7 turns triflar wound, both worked
> about the same.

This is a really good core for this kind of transformer. Just *two* turns
on the 50 ohm side yields 34 uH, for a lower cutoff below 250 kHz.
Since a turn is less than 4 cm, a transformer like this should have
good performance well into the VHF region. This appears to be the
core ICE uses in their transformer (if it isn't this one, it's
something

with very similar specs).

--
| John Doty "You can't confuse me, that's my job."

I have found his 5% of a wavelength "rule" to be very true.
And by using it Ihave never had a "TV" core, either the
binoculer or the small "O" , fail.

Before getting lost in theory, why not wind one and
see how it works.

Not exactly. Designed and approved by one fake Democratic:

''Theresa LePore is the former elections supervisor for Palm Beach
County, Florida. She designed the "butterfly ballot" in the 2000
presidential election. She lost in September 2004 to Dr. Arthur
Anderson and left office in January 2005.

LePore was a registered Republican, but then switched her party to
Democratic because according to her "when I ran [for the supervisor
position], I chose Democrat because the incumbent was Democrat and the
county registration is predominantly Democrat." After the 2000
election, she switched her party registration to Independent.''

Works fine if you use enough turns. For a 30:10 turn version, I've
measured a lower 3 dB cutoff of 330 kHz. A higher permeability material
optimized for HF would let you use fewer turns, but otherwise doesn't
perform better at HF, assuming the core is small.

The ICE model 180 transformer uses an HF core with only one turn on the
low impedance side. At HF its performance is nearly identical to 30:10
transformer on the TV core, but its lower 3 dB cutoff is 1 MHz, so it
isn't as good at MF and LF (needs more turns).

--
John Doty

To sum it up, the "correct" ferrite core will require fewer turns.
But, a VHF material will work fine, if you can get anough turns
without exceeding the "5% of wavelength" rule.

This flaming Liberal is a Michigan District Attorney who used to be a
CIA UC. He also prosecuted Dr. Kevorkian:

Testimony of James Marcinkowski
July 22, 2005

What is important now is not who wins or loses the political battle or
who may or may not be indicted; rather, it is a question of how we
will go about protecting the citizens of this country in a very
dangerous world. The undisputed fact is that we have irreparably
damaged our capability to collect human intelligence and thereby
significantly diminished our capability to protect the American
people.

Understandable to all Americans is a simple, incontrovertible, but
damning truth: the United States government exposed the identity of a
clandestine officer working for the CIA. This is not just another
partisan "dust-up" between political parties. This unprecedented act
will have far-reaching consequences for covert operations around the
world. Equally disastrous is that from the time of that first damning
act, we have continued on a course of self-inflicted wounds by
government officials who have refused to take any responsibility, have
played hide-and-seek with the truth and engaged in semantic parlor
games for more than two years, all at the expense of the safety of the
American people. No government official has that right.

For an understanding of what is at stake it is important to understand
some fundamental principles. No country or hostile group, from al
Qaeda to any drug rings operating in our cities, likes to be
infiltrated or spied upon. The CIA, much like any police department in
any city, has undercover officers--spies, that use "cover."

To operate under "cover" means you use some ruse to cloak both your
identity and your intentions. The degree of cover needed to carry out
any operation varies depending on the target of the investigation. A
police officer performing "street buys" uses a "light" cover, meaning
he or she could pose as something as simple as a drug user, operate
only at night and during the day and, believe it or not, have a desk
job in the police station. On the other hand, if an attempt were made
to infiltrate a crime syndicate, visiting the local police station or
drinking with fellow FBI agents after work may be out of the question.

In any scenario, your cover, no matter what the degree, provides personal protection and safety. But it does not end there. Cover is also used to protect collection methodology as well as any innocent persons a CIA officer may have regular contact with, such as overseas acquaintances, friends, and even other U.S. government officials.

While cover provides a degree of safety for the case officer, it also provides security for that officer's informants or agents. In most human intelligence operations, the confidentiality of the cover used by a CIA officer and the personal security of the agent or asset is mutually dependent. A case officer cannot be identified as working for the CIA, just as the informant/agent cannot be identified as working for the CIA through the case officer. If an informant or agent is exposed as working for the CIA, there is a good chance that the CIA officer has been identified as well. Similarly, if the CIA officer is exposed, his or her agents or informants are exposed. In all cases, the cover of a case officer ensures not only his or her own personal safety but that of the agents or assets as well.

The exposure of Valerie Plame's cover by the White House is the same as the local chief of police announcing to the media the identity of its undercover drug officers. In both cases, the ability of the officer to operate is destroyed, but there is also an added dimension. An informant in a major sophisticated crime network, or a CIA asset working in a foreign government, if exposed, has a rather good chance of losing more than just their ability to operate.

Any undercover officer, whether in the police department or the CIA, will tell you that the major concern of their informant or agent is their personal safety and that of their family. Cover is safety. If you cannot guarantee that safety in some form or other, the person will not work for you and the source of important information will be lost.

So how is the Valerie Plame incident perceived by any current or potential agent of the CIA? I will guarantee you that if the local police chief identified the names of the department's undercover officers, any half-way sophisticated undercover operation would come to a halt and if he survived that accidental discharge of a weapon in police headquarters, would be asked to retire.

And so the real issues before this Congress and this country today is not partisan politics, not even the loss of secrets. The secrets of Valerie Plame's cover are long gone. What has suffered perhaps irreversible damage is the credibility of our case officers when they try to convince our overseas contact that their safety is of primary importance to us. How are our case officers supposed to build and maintain that confidence when their own government cannot even guarantee the personal protection of the home team? While the loss of secrets in the world of espionage may be damaging, the stealing of the credibility of our CIA officers is unforgivable....

And so we are left with only one fundamental truth, the U.S. government exposed the identity of a covert operative. I am not convinced that the toothpaste can be put back into the tube. Great damage has been done and that damage has been increasing every single day for more than two years. The problem of the refusal to accept responsibility by senior government officials is ongoing and causing greater damage to our national security and our ability to collect human intelligence. But the problem lies not only with government officials but also with the media, commentators and other apologists who have no clue as to the workings of the intelligence community. Think about what we are doing from the perspective of our overseas human intelligence assets or potential assets.

I believe Bob Novak when he credited senior administration officials for the initial leak, or the simple, but not insignificant confirmation of that secret information, as I believe a CIA officer in some far away country will lose an opportunity to recruit an asset that may be of invaluable service to our covert war on terror because "promises of protection" will no longer carry the level of trust they once had.

Each time the leader of a political party opens his mouth in public to deflect responsibility, the word overseas is loud and clear--politics in this country does in fact trump national security.

Each time a distinguished ambassador is ruthlessly attacked for the information he provided, a foreign asset will contemplate why he should risk his life when his information will not be taken seriously.

Each time there is a perceived political "success" in deflecting responsibility by debating or re-debating some minutia, such actions are equally effective in undermining the ability of this country to protect itself against its enemies, because the two are indeed related. Each time the political machine made up of prime-time patriots and partisan ninnies display their ignorance by deriding Valerie Plame as a mere "paper-pusher," or belittling the varying degrees of cover used to protect our officers, or continuing to play partisan politics with our national security, it is a disservice to this country. By ridiculing, for example, the "degree" of cover or the use of post office boxes, you lessen the level of confidence that foreign nationals place in our covert capabilities.

Those who would advocate the "I'm ok, you're ok" politics of non-responsibility, should probably think about the impact of those actions on our foreign agents. Non-responsibility means we don't care. Not caring means a loss of security. A loss of security means a loss of an agent. The loss of an agent means the loss of information. The loss of information means an increase in the risk to the people of the United States.

There is a very serious message here. Before you shine up your American flag lapel pin and affix your patriotism to your sleeve, think about what the impact your actions will have on the security of

the American people. Think about whether your partisan obfuscation is creating confidence in the United States in general and the CIA in particular. If not, a true patriot would shut up.

Those who take pride in their political ability to divert the issue from the fundamental truth ought to be prepared to take their share of the responsibility for the continuing damage done to our national security.

When this unprecedented act first occurred, the president could have immediately demanded the resignation of all persons even tangentially involved. Or, at a minimum, he could have suspended the security clearances of these persons and placed them on administrative leave. Such methods are routine with police forces throughout the country. That would have at least sent the right message around the globe, that we take the security of those risking their lives on behalf of the United States seriously. Instead, we have flooded the foreign airwaves with two years of inaction, political rhetoric, ignorance, and partisan bickering. That's the wrong message. In doing so we have not lessened, but increased the threat to the security and safety of the people of the United States.

10W into a 15' antenna, most likely with a less then ideal
ground....I am impressed. I changed antennas, and added
to my ground system, this afternoon and was checking the
AM band. Given the garbage down there, I mean content
and technical qualtity, I haven't done any monitoring down
there in several months.

The TIS has a lot of "roll ins" for a variety of local events.
They mentinon a Sky Warn class to be held in March. I
suspect they don't update all that often and it means March
2005 not , March 2006.

Either they have increased their power, or my new antenna
and ground is a killer. I am going to have to check this out.

If I wasn't near 100F with >80% Iwould be tempted to go find
the Tx. I love to RDF fox hunt, but not in this heat.

And it was a little too hot to do antenna and ground work. But
a friend brought a ditch witch by, so it was too good a chance
to pass up. I put a perimter of 1/2" copper tubing around the
entire home. I new grounds where improtant, but if this made
this much difference...I am a little shocked.

Terry

Well, maybe...

Teller (the real life role model for Dr. Strangelove) had the idea of using nukes to "mine" natural gas.

The good news was, it worked--they actually found natural gas.

The bad news was, it was too radioactive to use for a few thousand years! :-)

Dang those pesky details...

Perhaps he has all the friends he needs. It's also possible that
he'd rather make friends based on who he is and how he behaves, rather
than putting on a front that only attracts those who would control and
reshape his style.

Interesting parallel to several threads, here, don't you think?

Some people aren't motivated by public approbation and popularity,
but would rather live their lives in the manner of their choice. And not
in the manner of someone else's choosing.

A choice that they are full well prepared to defend.

A microcosm of larger discussions in the group.

I'm not sure what "the manner of some else's choosing" has to do with name calling, rudeness, vulgarity, the lack of common courtesy and disrespect for the legitimate opinion of others. Other than those minor points, you might just be right. ;-)

< Snip >

Well then how many times am I going to have to tell you then is the
only question left.

All cores have a frequency response range. You have to pick an
appropriate one depending on where you intend it to operate. I have
come across ferrite cores that are worthless < 10 MHz so it may work
well on the upper bands and poorly on the lower. You may not notice
this right off because evening and nigh time signals on the lower bands
generally have more signal power.

I believe you have some basic equipment so you can check it out.

I think you may have better luck in the power supply section of
equipment you are tearing apart for components. Specifically the EMI
section will likely have some common mode chokes that are designed to
operate over the short wave spectrum to suppress conductive noise.

TV RF ferrites are designed for 50MHz to 500MHz or something along those
lines and their response of some falls off on the low end so I don't
recommend using them unless you can test them.

You either need to know that the material is of a certain type or be
able to test it.

Depends on the antenna. If it is a type where ground is half the antenna
then ground will have a tremendous influence on the response.

If the antenna type is a whole or balanced then it would make little
difference.

I think not this long. The radio probably has had functional design
problems. Maybe feature creep had a play in the delays.

LMAO,, now its missing ballot box's did it, and blacks were
threatened to be arrested for voting......and you know cause you stayed
up and watched the news. LOLOLOLOL .. Do you have a clue???
Do you have a clue as to what kind of retarded fool you make your-
self look like every time you post this total BS???????? But like I said
keep posting retard boy, the country needs people like you so they
can decide what a pack of fools the libs truly are..... Hell its free
advertising. Its funny retard boy that you say we're on the way out

when republicans keep winning elections. Oh and as to the messed up voting procedures in poor counties,,, guess what retard boy,, the entire election system in Fla. was designed and put in place by dimwit Dems like you. On another note, ex cons (felons) are "not" supposed to have any voting rights. Once you're a felon you lose that privilege, doing your time has nothing to do with anything. Another dumbass statement,, you really dont have a fucking clue about anything do you????????

Well, sort of. As I understand it, selectable sideband means that you
can select USB or LSB. By that definition, the sideband on some cheapie
Chinese radios, such as the Degen 1102, would be nonselectable sideband.
The 1102 has a single "SSB" button with a thumbwheel to adjust the BFO.

Actually, an Eton employee has been using one of the new E1's for several weeks now and says it surpasses the Satellit 800. Remember, the new E1 has THREE bandwidths, a FAST/SLOW AGC, selectable sideband sync detection, as well as PASSBAND tuning. So the set is actually somewhere between the Drake SW8 and the Drake R8B. The only main features missing on this portable are a Noise Blanker and extra bandwidth filters for CW reception. It is also missing a ferrit antenna for MW reception but instead uses the whip antenna, as does the Drake SW8. I would have preferred a large ferrit antenna for complete portability rather than have to hook up a loop or other external antenna for MW DXing. This should be (and I am told IS) a killer portable.

The reason given to me as to why the delays -- they are working out all quality control issues BEFORE they release any production units for retail as they don't want a repeat of what happened when the Satellit 800 came out.

Who was he? Callsign? Can you post location of the FCC enforcement action? Heard so much about this roll call guy that I would love to who he was?

He was Bob, KT4TR, had a signal to die for the times I heard him on 313 and 75m. Don't know where to find the stuff about the FCC action, it was a few years ago. I remember his trip to Spartanburg that precipitated the subsequent reading of court records that resulted in his alleged problems with the FCC.

Seems that KT4TR had it in for WB2OTK for some reason. Don't know all the particulars or reasons behind the hostility. Perhaps someone else could fill in the blanks here. Mr. Davies seemed quite involved with those goings on. While KT4TR was taking it to 'em on the airwaves, Mr. Davies was maintaining a website quite hostile to Mr. Whiten, WB2OTK.

< Snip >

Well then how many times am I going to have to tell you then is the
only question left.

All cores have a frequency response range. You have to pick an
appropriate one depending on where you intend it to operate. I have
come across ferrite cores that are worthless < 10 MHz so it may work
well on the upper bands and poorly on the lower. You may not notice
this right off because evening and nigh time signals on the lower bands
generally have more signal power.

I believe you have some basic equipment so you can check it out.

I think you may have better luck in the power supply section of
equipment you are tearing apart for components. Specifically the EMI
section will likely have some common mode chokes that are designed to
operate over the short wave spectrum to suppress conductive noise.

TV RF ferrites are designed for 50MHz to 500MHz or something along
those
lines and their response of some falls off on the low end so I don't
recommend using them unless you can test them.

You either need to know that the material is of a certain type or be
able to test it.

--
Telamon
Ventura, California

OK I am trying to be polite.
There is already enough anger in the world.
But, this is getting silly, back in Nov 2001
this same thread came up and John Doty explained why,
for this application, with small TV cores, the ferrite type
didn't mater that much. He gave actual loss values.
Your response was:

I generally wind mine with separate windings, not bifilar.

> In addition (at the frequencies of interest) they are not getting the
> inductance they think they are achieving.

Since I measure the characteristics of my transformers, I'm sure that I
do.

> Go here http://www.amidoncorp.com/f_mf g.htm

> "Material #06, red/gray color (µ A Carbonyl 'E' iron powder material
> having high volume resistivity. Offers high 'Q' for the 2 MHz to 30
> MHz. frequency range. "

High Q is of little use in a broadband transformer. Q refers to the
efficiency with which stored energy may be recovered, but you don't
want a
broadband transformer to *store* energy, you want it to transfer the
energy without storing it.

The virtue you want in a broadband transformer core is a high
permeability-frequency product f*mu. This maximizes the magnetizing
impedance for a given core size, minimizing the stored energy for a
given
applied voltage.

The classic material choice for broadband transformers at HF and above
is
type 43 ferrite, whose f*mu is about 2700 at 3 MHz, rising to 10000 at
30
MHz. Above 30 MHz, f*mu is approximately constant with this material.
The
TV transformers I've tested use a material similar to this. Materials
with
high f*mu are generally pretty lossy, but in a well designed broadband
transformer little energy actually enters the core material, so little
is
lost.

On the other hand, your #6 iron material has a permeability of only 8.
While its permeability probably doesn't decrease much with frequency

(unlike ferrite), this stuff still has a f*mu of only 24 at 3 MHz, and
240
at 30 MHz. This is a very poor choice for a broadband transformer core.
A
broadband transformer using a #6 core will need 6-10 times as much wire
as
a similar transformer using a #43 core. Wire length is directly related
to
leakage inductance and parasitic capacitance, the main factors limiting
high frequency performance of this sort of transformer.

> There is a price to be paid by separating the windings and that will be
> a reduced transfer of desired signal energy. You can of course wind the
> transformer bi-filar and still get the benefit of using the right core
> material.

Bifilar windings are mainly an antidote to leakage inductance. For a
small
amount of wire on a high mu core, leakage inductance is negligible
anyway,
so bifilar windings have little advantage.

> There is no "right" amount of turns for a broad band transformer
> because the frequency range of short wave is so large. You would pick a
> center frequency of a range of frequencies you want the transformer to
> operate over and use that in your calculations for inductive reactance.

What's the "center frequency" of a 100 kHz-30 MHz transformer? For a
conventional inductive transformer, a more workable approach is to
choose
a core that gives you adequate magnetizing inductance at your low
frequencies while using less than 5% of a wavelength of wire at your
high
frequencies (rule of thumb for controlling leakage inductance and stray
capacitance). An example:

A BN-73-202 core needs about 4 cm/turn. 9:3 turns thus requires 48 cm
of
wire, or 4.8% of a wavelength at 30 MHz. The 3 turn secondary has about
75
uH magnetizing inductance, exceeding the impedance of 50 ohm coax above
100 kHz.

Running through the same procedure with your favorite #6 material, a
9:3
T-130-6 uses as much wire as the design above, but has a lower
frequency
limit of 90 MHz (*above* its upper limit of 30 MHz). Not an effective
design. You could improve it by using controlled impedance bifilar
turns
(but that's a much trickier way to go).
John Doty

Please read the above repost as many times as you need
to understand the topic.
They work.

Every TV balun that I have tried has worked.

I have every reasond to expect every TV balun
core in the world to work. Theory is nice, but should
bow in the face of reality. I don't sell these things, I get
nothing out of these silly fights.

Have you ever built one?

If not, give it a try, and if it doesn't work flame away.

Do you remember the pointless flame war over "power dividers",
hybrids, or "passive multi set couplers? In your area of RF specialty
I am quite sure you know what you are toaling about, but as you
demonstrated in that thread you didn't ahve a friging clue what you
were talking about.

I will close this by reposting your comments from 20050427.
I am not claiming to be much of an expert in anything. I have
learned a few things over the years and based on my real world
experiences I will stand firm. Today I use Mini Circuit 9:! and 1:1
not because the TV cores didn't work, but because I can no longer
wind the damn things. Between my bad vision and stumbling
fingers it makes more sense for me to buy them. But the TV core
based units that I built still work, except for those destroyed by
lightning.

I just calculated it and you are right Tom. I have been a real dufus
and
giving Terry a headache for nothing. I generally don't think in terms
of
power since I work with small signals.

The resistive splitter is burning half the power as the T types three
16.7 ohm resistors in series are 50 ohms.

Sorry about that Terry. Looks like your transformer type is more
efficient in its bandwidth than the resistive type. Since you measured
3.2 dB on the transformer type you are very close to the ideal splitter
and your measurement on the resistive is also correct at 6 dB so you
can
stop scratching you head now.

--
Telamon
Ventura, California

Sorry for being rude, but I am sick and tired of you offereing
expert advice that is so clearly wrong, and that is clearly refuted
by people like John Doty who have a real knowledge of how
small cored ferrites behave at HF. Remember you can only
get away with this cheating by using very small cores. Anything
much over 38" and the magic quits and you must use the correct
core.

Terry

I just calculated it a
nd you are right Tom. I have been a real dufus and
giving Terry a headache for nothing. I generally don't think in terms
of
power since I work with small signals.

The resistive splitter is burning half the power as the T types three
16.7 ohm resistors in series are 50 ohms.

Sorry about that Terry. Looks like your transformer type is more
efficient in its bandwidth than the resistive type. Since you measured
3.2 dB on the transformer type you are very close to the ideal splitter
and your measurement on the resistive is also correct at 6 dB so you
can
stop scratching you head now.

< Snip >

I have made and tested choke type Baluns from impedance transformers used for TV and FM devices. Some cores worked well right on down to the bottom of the AMBCB band and others stopped working in the 10 to 15 MHz range. All worked just fine above 15 MHz. Let me define working well as I got the impedance transformation I designed it to have above 15 MHz and not below that frequency. Because I scavenged them I don't know what the cores were made of other than they were ferrite.

When you made one from scavenged parts I suggest that you test them.

Can't comment. No idea what RCI is/was.

> 3. The UK has failed to persuade US TV broadcasting entities to abandon or
> change the way they broadcast to Canada

Ummmmm ..... why would/should they? The Yanks probably don't know that
Canada exists.

> [US News and Information broadcasters that should "localise" to Canada]
> -- CNN
> -- MSNBC
> -- Fox News (replaced with Sky News, Sky Fox Canada?)

> 4. The UK has failed to encourage Australia & NZ to increase their (TV &
> SW) transmissions to Canada, a vital part of the "Commonwealth" glue.

Ummmmm ..... why would/should they? And if they tried, the Australian
Broadcasting Authority would probably suggest that they go plait their poop.

> 5. Nor has the UK encouraged Australia (specifically) to increase its
> external broadcaster Radio Australia into a "3rd" regional axis (*) of
> commonwealth broadcasting.

Ummmmm ..... why would/should they? Don't think the
Indonesians/Malaysians/Singaporeans/Japanese/Filipinos would be much
interested.

> (*) It is important for Commonwealth as a whole to have a somewhat unified
> multilateral cultural broadcasting effort -- not only for the security of
> the individual members, but for the security of the Commonwealth as a
> whole.

I suppose we don't share your enthusiasm for the Commonwealth. Useful for a tween-Lympics C'wealth Games (here in Melbourne 2006), but little else.

I recall the feeling of betrayal when I - Welsh-born and of Welsh parentage but with an Oz passport was directed to the "Alien" THEM desk at customs, while the Krauts, Frogs and other foreigners were waved through the "UK/EU" US desk. So much for the Commonwealth.

Folks, here is an interesting (and in my view brilliant) excerpt from a book by Sir Winston Churchill. He wrote this in 1899, when he was 25 years old.

I apologise for posting this as this is not exactly related to radio, but given the existing world situation with Islam, I thought that I would share this.

Peter Newman

"How dreadful are the curses which Mohammedanism lays on its votaries! Besides the fanatical frenzy, which is as dangerous in a man as hydrophobia in a dog, there is this fearful fatalistic apathy. The effects are apparent in many countries. Improvident habits, slovenly systems of agriculture, sluggish methods of commerce, and insecurity of property exist wherever the followers of the Prophet rule or live. A degraded sensualism deprives this life of its grace and refinement; the next of its dignity and sanctity. The fact that in Mohammedan law every woman must belong to some man as his absolute property, either as a child, a wife, or a concubine, must delay the final extinction of slavery until the faith of Islam has ceased to be a great power among men. Individual Moslems may show splendid qualities - but the influence of the religion paralyses the social development of those who follow it. No stronger retrograde force exists in the world. Far from being moribund, Mohammedanism is a militant and proselytizing faith. It has already spread throughout Central Africa, raising fearless warriors at every step; and were it not that Christianity is sheltered in the strong arms of science, the science against which it had vainly struggled, the civilisation of modern Europe might fall, as fell the civilisation of ancient Rome."

Sir Winston Churchill, from The River War, first edition, Vol. II, pages 248-50 (London: Longmans, Green & Co., 1899).

That one scan of the manual that has been floating around for a few years in yahoo groups is useless.

I would like to get a real one.

Now they have terrorists with machine guns running around London shooting innocent people in the head and assuming everyone understands English. Bin Ladens work is done.

Terrorists? Really? Damn, that must mean that you're a 'tard who's out running around assuming you have a clue. And that may ultimately be even more dangereous to our existence than Bin Laden.

You're hilarious!

You fail to understand that Canada (and Australia, New Zealand, India
etc.) are totally independant of the UK and have been for many
decades.

It is not for the UK government to either fund or direct these
nations' broadcasting arrangements!!

WHOA, HOLD ON A SEC!

I know you don't like Larry Magne. I frankly don't care why -- we've
covered it repeatedly in email, so I don't think we need to go there
again.

But if you claim he, or any other reviewer, called the Sat 800, quote,
"the best shortwave receiver in the world," unquote, you'd better be
able to back that up, chapter, verse, publication, page, etc.

That's way the hell over the line, Peter.

I'll refer you to any SAT 800 direct mail piece, the preview commentary by Grove and any of the numerous ads for SAT 800 during the first couple of years of release. It's been published vitually continuously. And discussed here to death. It's also in virtually any e-Bay listing straight from the Lextronix presentation materials offered to 'officially authorized retailers.'

If you want page numbers, I'm sorry. I read the comments, laughed out loud and dismissed them. I didn't catalog them. Maybe I should start doing that, this being USENet, and all.

Perhaps someone here has a SAT 800 direct mail piece they can scan for you. Particularly the one where SAT 800 is claimed to be German radio would be fun.

Well actually the very long post did make that point. And I'm sure
that being able to decode the designator would be useful. I hope that
is not the sole reason the ARRL has remaining to justify the code test
however.

I have an idea. Instead of just requiring morse code lets modernize the test and make it truly relevant. Lets give prospective hams a menu of tests to pick one from: Morse code; Kitten juggling; Controlling a horse and carriage with a buggywhip; Riding a 5 foot wave on a longboard; Completing the 5 borough bike ride in NYC. Any one would be as helpful in identifying prospective hams.

Heaven forbid that the prospective hams would actually be tested in the safe and courteous operation of radio equipment by requiring them to go live under a tutor for a couple of hours.

5761. I think we owe the Wilsons an apology (at the very least)

Newsgroup: rec.radio.shortwave
Date: 2005-07-24 14:00:46 UTC
From: David <rickets@knac.com>
Message-ID: <ul77e15fjucobkrhn608p46j5mnivi2n4d@4ax.com>
Source record: 29398

I submit this statement to the Congress in an effort to correct a malicious and disingenuous smear campaign that has been executed against a friend and former colleague, Valerie (Plame) Wilson. Neither Valerie, nor her husband, Ambassador Joseph Wilson has asked me to do anything on their behalf. I am speaking up because I was raised to stop bullies. In the case of Valerie Plame she is facing a gang of bullies that is being directed by the Republican National Committee.

Jul 22, 2005 -- 02:34:35 AM EST

I entered on duty at the CIA in September 1985 as a member of the Career Trainee Program. Senator Orin Hatch had written a letter of recommendation on my behalf and I believe that helped open the doors to me at the CIA. From the first day all members of my training class were undercover. In other words, we had to lie to our family and friends about where we worked. We could only tell those who had an absolute need to know where we worked. In my case, I told my wife. Most of us were given official cover, which means that on paper we worked for some other U.S. Government Agency. People with official cover enjoy the benefits of an official passport, usually a black passport--i.e., a diplomatic passport. If we were caught overseas engaged in espionage activity the black passport was a get out of jail free card. It accords the bearer the protections of the Geneva Convention.
Valerie Plame was a classmate of mine from the day she started with the CIA. At the time I only knew her as Valerie P. Even though all of us in the training class held Top Secret Clearances, we were asked to limit our knowledge of our other classmates to the first initial of their last name. So, Larry J. knew Val P. rather than Valerie Plame. Her name did not become a part of my consciousness until her cover was betrayed by the Government officials who gave columnist Robert Novak her true name.

Although Val started off with official cover, she later joined a select group of intelligence officers a few years later when she became a NOC, i.e. a Non-Official Cover officer. That meant she agreed to operate overseas without the protection of a diplomatic passport. She was using cover, which we now know because of the leak to Robert Novak, of the consulting firm Brewster-Jennings. When she traveled overseas she did not use or have an official passport. If she had been caught engaged in espionage activities while traveling overseas without the black passport she could have been executed.

We must put to bed the lie that she was not undercover. For starters, if she had not been undercover then the CIA would not have referred the matter to the Justice Department. Some reports, such as one in the Washington Times that Valerie Plame's supervisor at the CIA, Fred Rustman, said she told friends and family she worked at the CIA and that her cover was light. These claims are not true. Rustman, who supervised Val in one of her earliest assignments, left the CIA in 1990 and did not stay in social contact with Valerie. His knowledge of Val's cover is dated. He does not know what she has done during the past 15 years.

Val only told those with a need to know about her status in order to safeguard her cover, not compromise it. Val has never been a flamboyant, insecure person who felt the need to tell people what her "real" job was. She was content with being known as an energy consultant married to Joe Wilson and the mother of twins. Despite the repeated claims of representatives for the Republican National Committee, the Wilson's neighbors did not know where Valerie really worked until Novak's op-ed appeared.

I would note that not a single member of our training class has come forward to denounce Valerie or question her bona fides. To the contrary, those we have talked to have endorsed what those of us who have left the CIA are doing to defend her reputation and honor.

As noted in the joint letter submitted to Congressional leaders earlier this week, the RNC is repeating the lie that Valerie was nothing more than a glorified desk jockey and could not possibly have any cover worth protecting. To those such as Victoria Toensing, Representative Peter King, P. J. O'Rourke, and Representative Roy Blunt I can only say one thing--you are wrong. I am stunned that some political leaders have such ignorance about a matter so basic to the national security structure of this nation.

Robert Novak's compromise of Valerie caused even more damage. It subsequently led to scrutiny of her cover company. This not only compromised her "cover" company but potentially every individual overseas who had been in contact with that company or with her.

Another false claim is that Valerie sent her husband on the mission to Niger. According to the Senate Intelligence Committee Report issued in July 2004, it is clear that the Vice President himself requested that the CIA provide its views on a Defense Intelligence Agency report that Iraq was trying to acquire uranium from Niger. The Vice President's request was relayed through the CIA bureaucracy to the Director of the Counter Proliferation Division at the CIA. Valerie worked for a branch in that Division.

The Senate Intelligence Report is frequently cited by Republican partisans as "proof" that Valerie sent her husband to Niger because she sent a memo describing her husband's qualifications to the Deputy Division Chief. Several news personalities, such as Chris Matthews and Bill O'Reilly continue to repeat this nonsense as proof. What the

Senate Intelligence Committee does not include in the report is the fact that Valerie's boss had asked her to write a memo outlining her husband's qualifications for the job. She did what any good employee does; she gave her boss what he asked for.

The decision to send Joe Wilson on the mission to Niger was made by Valerie's bosses. She did not have the authority to sign travel vouchers, issue travel orders, or expend one dime of U.S. taxpayer dollars on her own. Yet, she has been singled out by the Republican National Committee and its partisans as a legitimate target of attack. It was Karl Rove who told Chris Matthews, "Wilson's wife is fair game".

What makes the unjustified and inappropriate attacks on Valerie Plame and her reputation so unfair is that there was no Administration policy position stipulating that Iraq was trying to acquire uranium in February 2002. That issue was still up in the air and, as noted by SSCI, Vice President Cheney himself asked for more information.

At the end of the day we are left with these facts. We went to war in Iraq on the premise that Saddam was reacquiring weapons of mass destruction. Joe Wilson was sent on a mission to Niger in response to a request initiated by the Vice President. Joe Wilson supplied information to the CIA that supported other reports debunking the claim that Saddam was trying to buy yellow cake uranium from Niger. When Joe went public with his information, which had been corroborated by the CIA in April 2003, the response from the White House was to call him a liar and spread the name of his wife around.

We sit here more than two years later and the storm of invective and smear against Ambassador Wilson and his wife, Valerie, continues. I voted for George Bush in November of 2000 because I wanted a President who knew what the meaning of "is" was. I was tired of political operatives who spent endless hours on cable news channels parsing words. I was promised a President who would bring a new tone and new ethical standards to Washington.

So where are we? The President has flip flopped and backed away from his promise to fire anyone at the White House implicated in a leak. We now know from press reports that at least Karl Rove and Scooter Libby are implicated in these leaks. Instead of a President concerned first and foremost with protecting this country and the intelligence officers who serve it, we are confronted with a President who is willing to sit by while political operatives savage the reputations of good Americans like Valerie and Joe Wilson. This is wrong.

Without firm action by President Bush to return to those principles he promised to follow when he came to Washington, I fear our political debate in this country will degenerate into an argument about what the meaning of "leak" is. We deserve people who work in the White House who are committed to protecting classified information, telling the truth to the American people, and living by example the idea that a

country at war with Islamic extremists cannot expend its efforts attacking other American citizens who simply tried to tell the truth.

I tend to overreact when I see abominations. In fact, I'm planning a rock star world tour in order to raise public awareness of obscenity and depravity. We will be using the services of Janis Joplin, Buddy Holly, Brian Jones, Jimmy Morrison, Carl Wilson, Keith Moon among countless others.

We have no less than a dozen refrigerated buses to haul the musicians and their gear around. We have to give many thanks to the agent of all the above artists for his untiring late night efforts at recruiting these huge stars..sometimes staying out until morning twilight hours and inexplicably getting much dirt under his finger nails and in shoes, pockets and underwear.

Many, many thanks, Tracy Beerfart, WELL DONE!

Mr. Steve can say plenty more than 'tard. Just take a look at these
quotes - that is, before he got 'spnaked' by ISERVE.

Muhahahhaha... could happen again. Here they are:

10. I get the impression that you shit yourself everyday.

9. No, but you're probably whacking off just thinking about me,

8. Yep, typical German, still wanting to kill people.

7. Get back to me sometime when you've got your shit in the properly
sized sack.

6. I've got the feeling that he spends a lot of time 'loving
himself', if you know what I mean.

5. And no, Canadians are anything but heroic, they're mostly wimps
like you who fantasize about guys walking around in womens underwear.

4. Sorry, yo Grandpa was a member of the NAZI Party, and yo Momma was
a member of the Hitler Youth.

3. Death to lying academics is what I say! Long live the jihad to
purge our educational institutions of lying scum!

2. Really? And just what kind of crystal ball did your NAZI handlers
give you that would show that I've never had any relationships with
women?

1. You ain't got a clue! Now go look in the mirror, I think your tin
foil hat is just a wee bit askew.

Would you stop for some guy wearing normal street clothes and yelling at you? I don't think so. They also had him pinned down. He couldn't move when they murdered him.

==========
The officers "couldn't have been any more than two or three feet behind him at this time," Mr. Whitby said, "and he half tripped and was half pushed to the floor, and the policeman nearest to me had the black automatic pistol in his left hand."

The officer with the gun "held it down to the guy and unloaded five shots into him," Mr. Whitby said.

addicts which are powerful...
I thought that would be obvious and easy to figure out when you have
to step over the addicts in the gutter...

In that case, explain this "another crazed white guy" reply of yours.
Do I suppose correctly that perhaps you are not white and are not
entirely happy about your colour? Would it be also perhaps correct to
assume that you are a racist?

>The fucking English in large part created the Middle East mess. Don't
>give me that tired old Churchill crap.
>

The English certainly did not create Al Qaeda. And that "old tired
Churchill" description of Islam is certainly more fitting than
anything that any politician of today would dare to say publicly.

The problem of today is Islam and its crazed Muslims - certainly not
"crazed white guys".

I went to a local "Sharper Image" store in Avon CT and they haven't heard a thing about it.

I was hoping to sneak in and check it out, but they all looked perplexed or should I say looked perplexed at me like I was nuts the way i went on about it lol.

It's always hilarious to see just how ridiculous the no-coders can get. The above paragraph is a prime example.

Once again, if one can't learn at least 5 WPM then they are either incredibly lazy, incredibly stupid, or a combination of the two. In which case they have no business what so ever on ANY of the ham bands.

The problem today is people refusing to live within their means, both
personally and nationally.

The problem today is people see the differences between one another,
not the similarities.

If you want to defeat the jihadists you do not attack their religion.
You stop giving them reasons to kill you.

Bono is right. If the West would use their riches to truly help the
starving and infirm (most of whom are incidently Muslim), while
cutting back on the greed and gluttony at home that forces us to kill
for oil, then the jihadists wouldn't be able to recruit.

That was written during the time that Britain and Russia were engaged
in "The Great Game", or a contest of imperial superpowers to acquire
large stretches of land in central asia.

Actually, 'The River War' deals with his experiences in the Sudan, which most of us know is in Africa, rather than Asia.

I believe you missed the point, John. Getting along with others is not a matter of fault. It's a matter of preference. And some simply don't find enough value in it to worry about what anyone else thinks. Certainly not enough to change their social interface to accomodate the preferences of strangers.

Personally, I agree with them. I would much rather have friends who are my friends not because of an artificial face, but rather, who I really am. And I don't give a whit if someone tells me they don't like me because of my choise of language, lifestyle, or the dog hair on my staff jacket (I actually had that discussion when working for CBS...you can imagine how well that one went.)

Social convention is just that: a convention. It is not a law. Nor is compliance required. And if you'll recall a post of earlier this week, I asked Mr Lare if I had recalled correctly that he was ex Navy. He affirmed that was the case. And I'll bet if you asked him, he'd tell you that one of the aspects of his service was to not only uphold and defend the Constitution as well as the security and well being of the United States, but to defend the rights of the individual from the tyranny of the majority...the very foundation upon which our representative government is based. To be, within the law, the individual of your choice, not the individual chosen by social convention. The majority may not always be right, but the individual always has the right to choose his path. Is that not the essence of several current threads here?

So, it's not a matter of 'can't get along,' as much as it's a matter of 'you be you, I'll be me, and if you can't get along with me, so be it.'

It's no secret that there is no love lost between Steve Lare and myself. We've shared some pretty intense moments between us. And we don't agree on many things. But to participate in this discussion group, he and I have struck a fairly simple formula: He expresses himself the way he chooses, I express myself the way I choose. And if no one likes either one, or both, that's too bad. I've discovered that I can have civil discussions with anyone. Even in disagreement. As has Mr Lare.

Even with those I have sharp conflicts with. Including Mr Lare. As he
has discovered with me. Anyone has a problem with either one of us, or
anyone else for that matter, that problem is the choice of the individual.

Civility is also a choice. And on that turf, with some I disagree.
But that doesn't mean I care any more or less than someone who chooses a
different level of social interface.

And if you read very closely everything Mr Lare has posted to date,
at no time does he ever complain that he's being persecuted, excluded,
or that no one can get along with him. My sense is, without asking him
outright, that he's fine with himself, and he simply doesn't put enough
value on the opinions of many here to care whether they get along with
him or not. I'm sure he has his friends and confidants. HE gets to
choose them. Not the social convention, or the public majority.

Personally, if that's the case, he and I can agree on that.

Again, a microcosm of larger discussions here in the group.

>
> Perhaps someone here has a SAT 800 direct mail piece they can scan
> for you. Particularly the one where SAT 800 is claimed to be German
> radio would be fun.

Direct mail pieces aren't reviews.

Here, maybe I can help you out a little:

Passport, 2000, page 126-127:

"We tested a pre-production prototype, so our observations our provisional and WE HAVEN'T RATED THIS NEW RECEIVER--tempted though we are by its CONSIDERABLE PROMISE." (emphasis mine)

"Its performance looks EXCEPTIONALLY PROMISING..." (emphasis mine)

There is no phrase there saying, "the best shortwave receiver in the world." None. Nada.

Passport 2001, pp 127-135:

4 stars. Not even an implication of "the best shortwave receiver in the world."

One full page of "Pro," one full page of "Con." In the "Verdict" section, it says, "But all is not kudos. Construction consistency was wanting during the 'shakedown cruise,' with perhaps eight percent of units being returned to dealers for one reason or another."

In the "Evaluation of new model" section, 5 pages, the review cites the R8B as doing "virtually everything well."

In the "Bottom Line" section it does say, "it outperforms any PORTABLE OR PC-CONTROLLED RECEIVER WE HAVE TESTED," (emphasis mine), which is still a long way from implying or stating "the best shortwave receiver in the world."

At the end of the review, it states: "The Passport portatop review team includes Lawrence Magne, Tony Jones, Craig Tycon and George Zeller, with Avery Comarow, George Heidelman and John Wagner. Laboratory measurements by Robert Sherwood."

So, doubtless out there somewhere, in a parallel universe, there is a Passport review stating it is "the best shortwave receiver in the world," and the generally positive comments about its lab performance were forced at gunpoint from Robert Sherwood, and the rest of the review board was told to stuff it or forget the $500 pay check they

were getting this year, right?

You claimed that is a direct quote from a reviewer. Back it up. If you have an ad saying that some reviewer said it, prove it. If you have a review saying that some reviewer said it, prove it. Some nebulous comment about "some flier" or an eBay seller won't cut it.

The quote you grabbed from Wikipedia leaves out a key detail.

She left the Republican party years before becoming a Democrat.

Various websites critical of her say she was a Republican as a youth
(1970's), switched to Independent, then switched to Democrat to run for
office in 1996, and after the 2000 election changed back to independent
because she didn't like the way Democrats were treating her during the
recount process.

I'd agree with the premise she doesn't seem to be loyal to any party.
But she was elected as a Democrat.

An MIT site I saw used her butterfly ballot as an example of why folks should hire professionals to design things.

Even the dkosopedia seems to think she meant well.

If she wasn't competent, her party should have found somebody better to run instead of endorsing her. They didn't.

And it's not fair to blame the Republicans for that.

Yes, he will. And he has. But that's not the point...the point was at
the introductory press photo op, in which representatives of Tecsun,
Lextronix and Mr Grove, Magne was present and made his endorsement.
There had only been a mockup produced at that time.

I believe that event was reported in Grove's newsletter.

I didn't say it came from a review. I said it came from a reviewer.
Larry Magne was quoted. Magne is a reviewer. He made the statement. It
was printed, quoted in SAT 800 materials. But nowhere did I say that it
was stated in a review.
>

That's a good question. Perhaps you're looking in reviews. It's not
in a review. But, I got so tired of reading it I packaged everything up
and sent it postage due to Lextronix and asked them to stop sending me
shit.

Perhaps you're right, there may be a review in a parallel universe
stating it. But I didn't claim it was from a review.

> You claimed that is a direct quote from a reviewer.

I didn't claim it came from a review. It came from a reviewer. Larry
Magne. And it was quoted liberally in many ads and promotional pieces,

with attribution.

''Income redistribution''?

Like giving billions and billions to Halliburton?

Think of meaningful foreign aid as another kind of defense spending.

Big problems require radical solutions. Otherwise, we will all go
down together.

Well... under the 'Features' portion of the URL above you might have read the
following:

"External Antenna Connection for the addition of auxiliary antennas, e.g.
professionally engineered shortwave antennas; long-wire shortwave
antennas; specialized AM broadcast band antennas for enthusiasts of AM
DXï¿½ing; FM broadcast band antennas and XM antenna. "

I may be wrong, but one would figure that there would be more than one
connection.

I'd love to believe this that the E1 will be this good. However, a long list of bells and whistles doesn't mean much, as they're often tacked onto a receiver that's unable to do them justice. In many cases, you'll hear far more on a qualify receiver that *lacks* those bells and whistles, like the Lowe HF-150.

But even if the E1 turns out to be problem free, it's in all likelihood a mistake to even utter its name in the same sentence as the R8B.

I guess the extent of Drake's involvement is one of the big questions here, isn't it? My understanding is that the E1 will not be sold by Drake; nor will Drake promote it in any way. This makes me suspect that Drake's about as involved with the E1 as Grundig was involved with the Satellit 800. Eton is just fond of riding on other manufacturer's long coat tails.

Yea right Im sure. You are aware that some of those blacks
were voting Republican . Once again it kind of evens things out
doesnt it. I think today there are somewhere in the vicinity of
25,000 registered republican black voters in Fla. So that issue
is kind of a moot point. Once again SCOTUS in the end had it
right.

Actually, metal objects will create a hot spot so the tinfoil hat
crowd will have their brains broiled that much quicker.

I think it's great that we are researching non-lethal weapons; though
I'm not so sure about this microwave one - I like the sonic weapon a
bit better. There has also been research on the use of extremely
noxious smelling agents as a means of temporarily incapacitating
people.

5831. Notes from a month in Europe

Newsgroup: rec.radio.shortwave
Date: 2005-07-24 18:29:23 UTC
From: uncle arnie <unclearnie@nowhere.at.all>
Message-ID: <11e7ng6p8okou8c@corp.supernews.com>
Source record: 29315

Much stronger signal area than western North America. Much stronger. BBC is listenable on 648 MW which was informative during the two sets of terror bombings. There is an awful lot of bad Italian, Turkish and other similar music cluttering up FM, MW and SW. I found myself unable to classify and log properly because of too many stations. Never used the roll up antenna I brought.

I took a Sangean ATS 606A with me. I wouldn't bother next time. I picked up a "Luxus Weltempfï¿½nger mit PLL Tuner" (luxury short-wave receiver with pll tuner) made by Elta of Germany for 9.95?, which is about $12 US or 14.50 Cdn. It does not have the MW 9 versus 10 hz adjustment so not usable for MW in North America, but for this price it is a throw away. It uses the Sangean wall wart which has an auto-switch and changeable plugs for the European pin plugs and higher voltage. I bought it in Globus which is Germany's answer to Walmart from the look of the place and unusual range of stuff.

All Europeans appear to have cell phones - "Handies". And they obsessively open and close them everywhere. The costs are more than what I pay in Canada.

Glad to have avoided the UK in the month the Holland, France, Italy and Germany with brief stops in Austria and Belgium. I think the train system (aside from the undergrounds and metros in cities) is extremely vulnerable to terror attacks and I wish they'd do airport type screenings. The Dutch were the most thorough both before and after 07 July re border crossing and scanning passports. The Italians don't care, the Germans are more careful than the French, both of which are in the middle. The European radio, TV and newspapers all support the Afgan intervention, and all reject the one in Iraq, even when their gov'ts have sent troops (e.g., Dutch). We did not advertise our Canadian nationality and did not see any overt hostility to Americans or anyone else except in Italy toward a S. Korean who got a bad hassle from the rail police in Italy (the poor guy had been robbed on the train and they wanted to talk about his immigration status) and a Turk from the Dutch border police on the train (post July 07, probably wondered about his risk - racial profiling?). Wisely, the social chit chat with Europeans and travelling North Americans avoided politics nearly universally except in Paris and Amsterdam. I pretended to speak only French when this happened. My German has improved but this is one impossible language to learn correctly by just talking to people.

A joke told to me by an American living in Italy:

In European heaven, Italians are the lovers, British the police, French the cooks, and the Germans organize everything. In European hell, Brits are the cooks, the French the police, Italians organize everything and the

Germans are the lovers.

Cheney and Herbert Bush set the whole deal up. It's a scam.

$60 dollars a day per soldier for spoiled food.

Sailboat fuel convoys.

Billions of dollars missing.

During WW2 there was commission to provide oversight and prevent
profiteering, set up by a Democratic congress to oversee a Democratic
president. Republicans have no intention of checking up on their own.
They are swine.

Sudan is run by Muslims, mostly of Arab descent. There are Christians in
Sudan, but they're an oppressed minority, as are the blacks (as opposed
to the Arabs, who run things). The people in Darfur who have been
subjected to genocide by Arab Muslims are Black Christians. The Arab
Muslims in Sudan have been fighting civil wars against Black Christians
for decades, mostly in the south, but now in the west. One other thing:
Sudan is full of oil, most of which is inaccessible because of the wars.

Last week I bought a book by Joshua Piven and David Borgenicht at the Goodwill store,The WORST-CASE SCENARIO 2003 Survival Calender A Week-by-Week Guide TO Surviving A Year's Worth Of Peril.One of the articles in the book says,HOW TO SURVIVE A NUCLEAR EXPLOSION.1 An underground shelter covered by one meter or more of earth will provide the best protection against a nuclear explosion and fallout radiation.However,if you cannot get to such a shelter,the following structures offer the best protection: Caves or tunnels covered by more than one meter of earth.Storm or storage cellars.Basements.Abandoned buildings made of stone or mud.
2 If you have been exposed to radiation,immediately wash your body thoroughly with soap and water,even if the water may also be contamited.This will remove most of the radiation particles,but not all.If no water is available,wipe yourself down with a clean cloth or uncontaminated dirt (dirt that is at least a meter under the surface).
3 You can safely obtain water from underground sources (springs and wells,for example) that undergo natural filtration,or from pipes in abandoned houses or stores.Snow that you take from 15 or more centimeters below the surface is also a safe source of water.
4 Even though wild animals may not be free from contamination,you can use them as a food source if other foods are not available.Do not,however,eat an animal that appears to be sick.Carefully skin all animals,and do not eat meat close to the bones and joints (an animal's skeleton contains over 90 percent of the radioactivity).All eggs,even if laid during the period of fallout,will be safe to eat.

5841. Komrade David's Moral Confusion

Newsgroup: rec.radio.shortwave
Date: 2005-07-24 18:54:26 UTC
From: SeeingEyeDog <look@u.org>
Message-ID: <11e7p1n5eu9ru31@corp.supernews.com>
Source record: 29323

I don't expect Komrade David to be capable of comprehending the following article.
It is written at a college level which is far beyond the reach of Komrade David's intellectual abilities.
But, that is exactly how the Communist Party likes their "useful idiots".

The London Bombings: A View from the Left
By Norman Geras
The Guardian Unlimited | July 22, 2005

The following article, by Norman Geras, originally appeared in the Thursday, July 21 issue of The Guardian, a key newspaper of the British Left, under the title, "There are Apologists Amongst Us." It was written before the latest round of bombings... Those blasts further punctuate the moral confusion of the leftists Geras takes to task in his essay. -- The Editors.

Norman Geras is professor emeritus in government at the University of Manchester; the following is the original, unedited longer version of the above mentioned published article.

Apologists among us

OK, it's more than time to nail this. Within hours of the bombs going off last Thursday the voices one could have predicted began to make themselves heard with their putative explanations for the murder and maiming of a random group of tube and bus passengers in London. It was due to Blair, Iraq and Afghanistan, illegal war and all the rest of it. The first voices, so far as I know, were those of the SWP and George Galloway, but it wasn't very long - indeed it was no time at all, taking into account production schedules - before this stuff was spreading like the infestation it is across the pages of Britain's oldest liberal newspaper, where it has remained for going on a week (and today as appallingly as ever).

Let's just get by the matter of timing - of timeliness - with the brief expression of repugnance which it deserves. No words of dismay or regret, let alone sorrow, mourning, could be allowed to pass these people's lips without the accompaniment of a 'We told you so' and an exercise in blaming someone else than the perpetrators. No sense of what an awful tragedy like this might call for or rule out. Just as if you were to hear from a distraught friend that her husband (or lover, mother, son) had just been murdered while walking in a 'bad' neighbourhood, and were to respond by saying how upset you were to hear it (or maybe even to give that part a miss) but that it was extremely foolish of the deceased to have been walking there on his or her own. We had all this in the early aftermath of September 11 2001, so in a way it was to be expected. But one constantly nurtures the

illusion that people learn. The fact is that some of them don't and, from where they think, can't. It is a matter of interest to me now that there was even (some time during the last year, though I don't recall where and so can't link to it) a comments thread on which one or two of the participants questioned whether there had really been left and liberal voices after 9/11 making excuses for the crime of that day and proffering little essays in 'understanding'. Yes, there really were then, and there have been again now.

It needs to be seen and said clear: there are, amongst us, apologists for what the killers do, and they make more difficult the long fight that is needed to defeat them. (To forestall any possible misunderstanding on this point: I do not say these people are not entitled to the views they express or to their expression of them. They are. Just as I am entitled to criticize their views for the wretched apologia they amount to.) The plea will be made, though - it always is - that these are not apologists, they are merely honest Joes and Joanies endeavouring to understand the world in which we all live. What could be wrong with that? What indeed? Nothing is wrong with genuine efforts at understanding; on these we all depend. But the genuine article is one thing, and root-causes advocacy that seeks to dissipate responsibility for atrocity, mass murder, crime against humanity, especially in the immediate aftermath of their occurrence, is something else.

Note, first, the selectivity in the general way root-causes arguments function. Purporting to be about causal explanation rather than excuse-making, they are invariably deployed on behalf of movements, actions, etc., for which the proponent wants to engage our sympathy or indulgence, and in order to direct blame towards some party for whom he or she has no sympathy. Try the following, by way of a hypothetical example, to see how the exercise works and doesn't work.

On account of the present situation in Zimbabwe, the government decides to halt all scheduled deportations of Zimbabweans who have been denied the right to remain in the UK. Some BNP thugs are made angry by this decision and they take out their anger by beating up a passer-by who happens to be an African immigrant. Can you imagine a single person of left or liberal outlook who would blame, or even partially blame, this act of violence on the government's decision to halt the deportations, or who would urge us to consider sympathetically the root causes of the act? It wouldn't happen, even though (ex hypothesi) the government decision is part of the causal chain leading to the violence in question. It wouldn't happen because the anger of the thugs doesn't begin to justify what they have done.

The root-causers always plead a desire merely to expand our understanding, but they're very selective in what they want us to 'understand'. Did you ever hear a Jenny Tonge who empathizes with the Palestinian suicide bomber also understanding the worries of Israeli and other Jews - after the Holocaust, after the decades-long hostility of the Arab world to the State of Israel and the teaching of hatred there against Jews, after the acts of war against that state and the acts of terrorism against its citizens? This would seem to constitute a potentially rich soil of roots and causes, but it goes unexplored by the supposedly non-excuse-making purveyors of a

root-causism seeking to 'understand'.

The fact is that if causes and explanation are indeed a serious enterprise and not just a convenient partisan game, then it needs to be recognized that causality is one thing and moral responsibility another, although the two are related. Observe...

Me, David and Sam are chatting. I make a remark to David, David gets cross because of the remark and he punches me in the mouth. Sam says 'You had it coming'. In this story it is uncontroversially true - I can tell you this, being the story's one and only author - that my remark to David and Sam is the cause of David's anger. Is Sam, then, right to tell me in effect that I either share the blame for David's punching me in the mouth or am entirely to blame for it myself? Well, the content of my remark was 'I love the music of Bob Dylan'. David for his part doesn't like the music of Bob Dylan. I think most people will recognize without the need of further urging on my part that, contrary to what Sam says, I didn't have it coming, David is entirely to blame for punching me in the mouth and I, accordingly, am not to blame in any way at all. If, on the other hand, my remark was not about Bob Dylan's music, but was a deeply offensive comment about David's mother, then without troubling to weight the respective shares of blame here, I'd say it would have been reasonable for Sam to tell me that I must bear some of it.

In circumstances he judges not too risky, Bob, an occasional but serial rapist, is drawn to women dressed in some particular way. One morning Elaine dresses in that particular way and she crosses Bob's path in circumstances he judges not too risky. He rapes her. Elaine's mode of dress is part of the causal chain which leads to her rape. But she is not at all to blame for being raped.

The fact that something someone else does contributes causally to a crime or atrocity, doesn't show that they, as well as the direct agent(s), are morally responsible for that crime or atrocity, if what they have contributed causally is not itself wrong and doesn't serve to justify it. Furthemore, even when what someone else has contributed causally to the occurrence of the criminal or atrocious act is wrong, this won't necessarily show they bear any of the blame for it. If Mabel borrows Zack's bicycle without permission and Zack, being embittered about this, burns down Mabel's house, Mabel doesn't share the blame for her house being burned down. Though she may have behaved wrongly and her doing so is part of the causal chain leading to the conflagration, neither her act nor the wrongness of it justifies Zack in burning down her house. So simply by invoking prior causes, or putative prior causes, you do not make the case go through - the case, I mean, that someone else than the actual perpetrator of the wrongdoing is to blame.

The 'We told you so' crowd all just somehow know that the Iraq war was an effective cause of the deaths in London last week. How do they know this, these clever people? Leave aside for the moment the question of rightness and wrongness - for, of course, there were many people (in London, in the rest of the UK) for whom the Iraq war was not wrong but right, and if they are right that it was right, then no blame attaches to those who led,

prosecuted and supported that war, even if it has entered the causal chain leading to the bombings, by way of the motivating grievances of the 'militants' and 'activists'. But, as I say, leave this aside. How do they know?

What they need to know is not just that Iraq was one of a number of influencing causes, but that it was the specific, and a necessary, motivating cause for the London bombings. Because if it was only an influencing motivational cause amongst others, and if, more particularly, another such motivational cause was supplied by the military intervention in Afghanistan, then we don't have that the London bombings wouldn't have happened but for the Iraq war. Now, I'm aware that some of the 'We told you so' people are of the view that the intervention in Afghanistan was wrong too. But others of the 'We told you so' people aren't of this view; and that segment of root-cause opinion, at least, will have a hard time of it establishing that just the Iraq war, and not Afghanistan - or anything else, for that matter (Palestine, the status of women, modernity, sexual freedom, pluralism, religious tolerance) - is what has provoked the murderers to their murders.

As for those (the SWPers, Galloways, etc.) for whom the intervention in Afghanistan should also not have happened, I'm happy to leave them where they are on this. These are people for whom the crime of 9/11 did not constitute an act of war meriting a military response, people whose preferred course of action was to leave the Taliban in situ ruling that country and al-Qaida with the freedom to continue organizing there. This rather does help to establish what is one of the main objects of the present post, namely that the root-causers are very selective about the root causes they're willing to recognize as relevant; and, attached as they are to an ethico-political outlook that has lately been (let us just say) indulgent towards anti-democratic forces, they particularly favour root causes originating in the vicinity of Washington DC.

To shift part of the blame for the London killings and maimings on to Blair and Bush - and also Parliament and Congress, and everyone who supported the war in all the coalition-of-the-willing countries - you not only have to guess at the Iraq war having been operative and decisive in the motivations of the actual bombers, you not only have to overlook anything that might have been right about that war, like seeing off one of the most brutal and murderous dictators of the last few decades, you further have to reckon that what was wrong about the war not merely caused the anger of those bombers but made their response, in some sort, morally appropriate rather than (what it in fact was) criminally excessive. Just think about the implications of this position. If on account of the Iraq war Tony Blair is to blame for four young British Muslims (as it now seems) murdering and injuring some large number of travellers in London, will he also be to blame if one or two members of the Stop the War Coalition for the same reason should decide to bump off a few people in, say, Dundee? Ever on the lookout for damning causes, the root-causers never seem to go for the most obvious of them, so visibly obvious a one that it isn't even beneath the surface of things the way roots often are, it's right out in the open. This is the cause, indeed,

which shows - negatively - why most critics of the Iraq war and of other events, institutions, movements, do not go around murdering people they are upset or angry with; I mean the fanatical, fundamentalist belief system which teaches hatred and justifies these acts of murder, justifies them to those who are swayed by it but not to anyone else. It somehow gets a free pass from the hunters-out of causes.

So, there are apologists among us. They have to be fought - fought intellectually and politically and without let-up. What is it that moves them to their disgraceful litany of excuses? This is doubtless a complex matter, but here are a few suggestions. One thing seems to be the treatment of those who practise terror as though they were part of some natural environment we have to take as given - not themselves free and responsible agents, but like a vicious dog or a hive of bees. If we do anything that provokes them, that must make us morally responsible, for they can be expected to react as they do. If this isn't a form of covert racism, then it's a kind of diminishing culturalism and is equally insulting to the people transformed by it into amoral beings incapable of choice or judgement.

Then, with at least some of the root-causers, their political sympathies and antipathies naturally incline them towards apologia. Here are people for whom the discomfiture of the US is number one priority, who would therefore have been happy to see the Americans bogged down without reaching Baghdad and toppling Saddam Hussein, who have openly spoken their support for an Iraqi 'resistance' committing daily crimes against the people of Iraq.

However, there are others not of this ilk and who would be horrified and outraged - and rightly - to see themselves described as indulgent towards such ugly and murderous forces, but who employ the tropes of blame-shifting and excuse-making nonetheless. These people, one may speculate more charitably, are merely confused; and amongst the things they are confused by are more local political divisions and animosities, which can seem to loom larger before them than the battle for and against democratic societies, for and against pluralist, enlightenment cultures, being fought across the world today.

Whatever the combination of impulses behind the pleas of the root-causes apologists, they do not help to strengthen the democratic culture and institutions whose benefits we and they share. Because we believe in and value these we have to contend with what such people say. But contend with is precisely it. We have to contest what they say of this kind, challenge it all along the line. We are not obliged to respect their repeated exercises in apologia for the inexcusable.

I can recall receiving audio from a drive-in movie theater back in the late '80's. The movie was Dragnet with Dan Akroyd. Called about a dozen drive-in theaters within a 300 mile radius to see if they were playing Dragnet. Never did find out where it was coming from.

But I bet if I had the TinyTenna Indoor Amplified Shortwave Antenna back then, I could have put it into direction finding mode, and found the exact location of that wireless system.

From: sdaniel13@nyc.rr.com
Message-ID: <1122232130.331076.110660@g14g2000cwa.googlegroups.com>
Source record: 29329

I fired up the old Lowe HF-150 this afternoon and was again bowled over by the quality of its audio.

This made me wonder: Which solid state receiver has the best audio? And I don't mean the best audio with the built in speaker, but with a reasonably good external speaker.

Is it the HF-150? The HF-225? Something else?

What's your opinion?

Steve

I own HF-150, AR-7030+ SW-8 and SW-2. Personally, I prefer the Drakes
for overall ear pleasing sound. Although, a trademark of John Thorpe
receivers is fine audio indeed.

For Muslim suicide bombers, you would need 70+ virgin robots though to
entice them to stop.

If the ray gun was anything like the microwave (which it sounds it is) then
you'd get a lot of charge and sparking like you would in the microwave.

I am looking for a user manual and the one in the yahoo group is that same
unreadable scanned manual.

If you try to print it out it is useless.

thanks anyway

Dave,
You can ORDER/purchase a new Users Manual from the parts suppliers that are
listed in the Yahoo "LINKS" section.
I am not referring to the "Files" section. You are not looking in the right
directory. Look in the "Links" section.
The Sony part number for the Users Manual is: 3-753-912-16

You say you want a revolution
Well, you know
We all want to change the world
You tell me that it's evolution
Well, you know
We all want to change the world
But when you talk about destruction
Don't you know that you can count me out
Don't you know it's gonna be all right
all right, all right

You say you got a real solution
Well, you know
We'd all love to see the plan
You ask me for a contribution
Well, you know
We're doing what we can
But when you want money
for people with minds that hate
All I can tell is brother you have to wait
Don't you know it's gonna be all right
all right, all right

You say you'll change the constitution
Well, you know
We all want to change your head
You tell me it's the institution
Well, you know
You better free your mind instead
But if you go carrying pictures of chairman Mao
You ain't going to make it with anyone anyhow
Don't you know it's gonna be all right
all right, all right
all right, all right, all right
all right, all right, all right

commanders' words express the following, a most intellectually designed discourse:

"Well, maybe whenever an_old_whateverheis decides to dump his girl.."

Rather, we are speaking of a type, caliber and class of woman a man would die for--and not relinquish willingly--other than perhaps on his death...

We ain't talkin' about pickin' up some floozy in a country bar here...

It is true that almost everyone outsources. Intuit also does. I have had very good support people from India with impeccable English and good skills and I have also had horrid ones who could not understand or speak English and did not know what they were doing.

I was told by one TS guy from India... one for Intuit that they are really trained and it is a lengthly process etc. etc. He was excellent. So I think each company decides how much to invest in this outsourced TS. Even if they don't outsource... if they don't train then it is garbage... It is the company's ethics rather than merely outsourcing per se.

Looks like a typo. But you couldn't get a "woman," regardless.

I don't believe I am a conspiracy nut.What I said about the U.S.national news media (U.S.Ministry Of Propaganda) is the Truth.And the article at homelandsecurityus.com,I didn't write the article.I only passed it on.Northeast Intelligence Network is a very reliable news site,in my opinion and so is www.stratfor.com There are very,very few reliable news sites in America anymore.

That is an idea,fix up some virgin robots that look real.I want me one.I wouldn't have to feed "her" or spend tons of money on clothes for "her" and "she" can do the washing and cooking and shopping (scratch the shopping thingy,can't trust em that far) and mow the lawn and I could push a button to stop "her" nagging..

- Have a Sangean 606A..

Why Not Take It Vs "Luxus Weltempfänger mit PLL Tuner"

Sangean 606A & Sony AN-LP1 DO just great ! ! !

Yeah, but still, it's not a nice way to act.

I dunno on this one yet Steve. Eton might want to hit the market with a
perfect radio with fantastic working features and ready to sell in fast
steady volume. I think they just put so much time, effort and improvements

into it that there is just no way it will be a dud. I bet this radio becomes the next best thing to own.

Plus, if the fancy hits you one day,
you can subscribe to XM sat radio also.
I also wouldn't be surprised if XMSR had a hand into offering improvements of this radio as well as possible resourses.
